 Volume One of the *Classics of Comparative Policy Analysis*, "Theory and Methods in Comparative Policy Analysis Studies" includes chapters that apply or further theory and methodology in the comparative study of public policy, in general, and policy analysis, in particular. Throughout the volume the chapters engage in theory building by assessing the relevance of theoretical approaches drawn from the social sciences, as well as some which are distinctive to policy analysis. Other chapters focus on various comparative approaches based on developments and challenges in the methodology of policy analysis. Together, this collection provides a comprehensive scholastic foundation to comparative policy analysis and comparative policy studies. "Theory and Methods in Comparative Policy Analysis Studies" will

be of great interest to scholars and learners of public policy and social sciences, as well as to practitioners considering what can be learned or facilitated through methodologically and theoretically sound approaches. The chapters were originally published as articles in the *Journal of Comparative Policy Analysis* which in the last two decades has pioneered the development of comparative public policy. The volume is part of a four-volume series, the *Classics of Comparative Policy Analysis* including *Theories and Methods*, *Institutions and Governance*, *Regional Comparisons*, and *Policy Sectors*. Each volume showcases a different new chapter comparing domains of study interrelated with comparative public policy: political science, public administration, governance and policy design, authored by the JCPA co-editors Giliberto Capano, Iris Geva-May, Michael Howlett, Leslie A. This publication addresses the need to strengthen the interface between the scientific community, knowledge-holders and policymakers, and build capacity for and strengthen the use of science and knowledge in policymaking on the topic of ecosystem services. With respect to the ecosystem service of pollination, FAO developed a protocol to identify and assess pollination deficits in crops - resulting in a global meta-analysis, with data from eleven countries. Results emerging from this endeavour give strong indication that pollination deficits may exist in a wide variety of farming systems across the world. As a response to this science, researchers and policymakers from the eleven countries considered the range and types of actions that can address pollination deficits, and developed an indicative set of policy responses. This publication is a result of this work, which considers the mainstreaming of ecosystem services at both national and international levels, with a focus on pollination services.

Microeconomic modeling has been an important tool for agricultural economists for several decades and promises to be important for addressing the research problems of the 1980s as well. This volume explores the possibilities for using micromodeling to analyze how individual farm businesses react to and are affected by farm policies. Although this purpose represents only one potential use of micro-modeling, effective modeling for policy analysis necessitates a broad look from several historical, analytical, and institutional perspectives. The Micromodeling Conference held November 18-20, 1981, at Airlie House, Virginia, under the auspices of the U.S. Department of Agri-culture's Economic Research Service and the Farm Foundation reflected these concerns.

While studies of policy analysis in other countries have assessed their needs and integrated them into training programmes for professional policy analysts, Japanese studies have been very limited. Policy analysis in Japan brings together for the first time a detailed examination of the theory and practice of policy analysis systems in Japan, at different levels. As part of the successful International Library of Policy Analysis series edited by Iris Geva-May and Michael Howlett, the book provides expert analysis to closely examine to what extent the Japanese government has succeeded in providing key policy actors with evidence-informed policy options, thereby improving the likelihood of better policies being adopted and implemented. The book also assesses Japan's future policy directions, allowing policy researchers and practitioners to draw a number of lessons from the Japanese experience. The book includes empirical case studies to aid teaching and further research, and will be a valuable resource for students and academics as well as policymakers. Features of the ILPA series include: • a country-specific systematic study of policy analysis systems by government and non-governmental actors • a history of the country's policy analysis, empirical case studies and a comparative overview of alternative approaches • a key reference collection for research and teaching in comparative policy analysis and policy studies
