that random vibration is actually a very well defined, reasonably repeatable vibration input but the drive signal is created by a random number generator, hence the name "random". The exciter motion is actually just a broadband vibration having a frequency-based shaping and an overall vibration level that is indicative of some real-world vibration (such as a test track or regular road).Random Vibration - an overview | ScienceDirect TopicsAn Introduction to Random Vibrations, Spectral & Wavelet Analysis: Third Edition (Dover Civil and Mechanical Engineering) eBook: D.
