5. Skin The skin and hairs and other structures such as nails constitute the integumentary system.

The principal parts of the skin are the superficial epidermis and deeper dermis. The dermis overlies and attaches to the subcutaneous (subQ) layer. Epidermal cells include keratinocytes, melanocytes, Langerhans cells, and Tactile cells.

Chapter 5-integumentary System. The layer of the epidermis that is the location where skin cells begin to die and keratinize is the stratum.

[Chapter 5 The Integumentary System](#)

The integumentary system helps regulate body temperature through its tight association with the sympathetic nervous system, the division of the nervous system involved in our fight-or-flight responses. The sympathetic nervous system is continuously monitoring body temperature and initiating

appropriate motor responses.
