The process of user-centered innovation: how it can benefit both users and manufacturers and how its emergence will bring changes in business models and in public policy. Innovation is rapidly becoming democratized. Users, aided by improvements in computer and communications technology, increasingly can develop their own new products and services. These innovating users—both individuals and firms—often freely share their innovations with others, creating user-innovation communities and a rich intellectual commons. In *Democratizing Innovation*, Eric von Hippel looks closely at this emerging system of user-centered innovation. He explains why and when users find it profitable to develop new products and services for themselves, and why it often pays users to reveal their innovations freely for the use of all.The trend toward democratized innovation can be seen in software and information products—most notably in the free and open-source software movement—but also in physical products. Von Hippel's many examples of user innovation in action range from surgical equipment to surfboards to software security features. He shows that product and service development is concentrated among "lead users," who are ahead on marketplace trends and whose innovations are often commercially attractive. Von Hippel argues that manufacturers should redesign their innovation processes and that they should systematically seek out innovations developed by users. He points to businesses—the custom semiconductor industry is one example—that have learned to assist user-innovators by providing them with toolkits for developing new products. User innovation has a positive impact on social welfare, and von Hippel proposes that government policies, including R&D subsidies and tax credits, should be realigned to eliminate biases against it. The goal of a democratized user-centered innovation system, says von Hippel, is well worth striving for. An electronic version of this book is available under a Creative Commons license.

As the values of integrative medicine continues to grow, alternative points of view and treatments are increasing in acceptance and prevalence. Homeopathic medicine is considered an important root to this approach. However, contributions of homeopathically qualified doctors have long been overlooked. A Century of Homeopaths is a detailed account of the many homeopaths who have contributed to medical progress since 1840. The accomplishments of over 100 homeopaths form the organizing structure of the book - many of whom have been lost to history. The text describes the ways in which homeopaths have influenced medical practice, research and public health, as well as the seminal effect of homeopaths in the emergence of today's medical specialties and in social reform, thus providing insights to healthcare professionals, researchers, students and medical historians.
