Cost Management: Accounting and Control emphasizes that changing conditions often require a change in cost management systems. Emphasizing this point stresses the dynamic and exciting nature of the field. By taking a systems approach -- one that first covers functional-based cost and control and then activity-based cost systems -- students understand how to understand and manage any cost management system.

How do the experts solve difficult problems in software development? In this unique and insightful book, leading computer scientists offer case studies that reveal how they found unusual, carefully designed solutions to high-profile projects. You will be able to look over the shoulder of major coding and design experts to see problems through their eyes. This is not simply another design patterns book, or another software engineering treatise on the right and wrong way to do things. The authors think aloud as they work through their project's architecture, the tradeoffs made in its construction, and when it was important to break rules. This book contains 33 chapters contributed by Brian Kernighan, Karl Fogel, Jon Bentley, Tim Bray, Elliotte Rusty Harold, Michael Feathers, Alberto Savoia, Charles Petzold, Douglas Crockford, Henry S. Warren, Jr., Ashish Gulhati, Lincoln Stein, Jim Kent, Jack Dongarra and Piotr Luszczek, Adam Kolawa, Greg Kroah-Hartman, Diomidis Spinellis, Andrew Kuchling, Travis E. Oliphant, Ronald Mak, Rogerio Atem de Carvalho and Rafael Monnerat, Bryan Cantrill, Jeff Dean and Sanjay Ghemawat, Simon Peyton Jones, Kent Dybvig, William Otte and Douglas C. Schmidt, Andrew Patzer, Andreas Zeller, Yukihiro Matsumoto, Arun Mehta, TV Raman, Laura Wingerd and Christopher Seiwald, and Brian Hayes. Beautiful Code is an opportunity for master coders to tell their story. All author royalties will be donated to Amnesty International.

This volume is devoted to management accounting approaches for analyzing business benefits and costs of climate change. It discusses future directions on carbon accounting, performance measurement and reporting as well as links between climate accounting and business processes, product and service development, supply chain innovation, economic successes and stakeholder relations. Companies are increasingly called on to contribute to combatting climate change and also face the challenges presented by climate-change related costs, risks and benefits. Risks can result from unpredictable weather conditions and government regulations, such as the EU emission trading system and new building codes. Climate change also offers numerous opportunities, such as energy efficiency innovations and carbon neutral products and production. Good management requires that carbon emissions are tracked and climate-related costs, risks and benefits are identified, measured and assessed. As such, research addressing corporate accounting frameworks and tools is of increasing importance when it comes to managing these carbon and climate-related issues.
