Deep Learning for the Earth

Sciences Associated University Presse

DEEP LEARNING FOR THE EARTH

SCIENCES Explore this insightful treatment of deep learning in the field of earth sciences, from four leading voices
Deep learning is a fundamental technique in modern Artificial Intelligence and is being applied to disciplines across the scientific

spectrum; earth science is no exception. Yet, the link between deep learning and Earth sciences has only recently entered academic curricula and thus has not yet proliferated. Deep Learning for the Earth Sciences delivers a unique perspective and treatment of the concepts, skills, and practices necessary to quickly become familiar with the application of deep learning techniques to the Earth sciences. The book prepares readers to be ready to use the technologies and principles described in their own research. The distinguished editors have also included resources that explain and provide new ideas and recommendations for new research especially useful to those involved in advanced research education or those seeking PhD thesis orientations. Readers will also benefit

from the inclusion of: An introduction to deep learning for classification purposes, including advances in image segmentation and encoding priors, anomaly detection and target detection, and domain adaptation An exploration of learning representations and unsupervised deep learning, including deep learning image fusion, image retrieval, and matching and co-registration Practical discussions of regression, fitting, parameter retrieval, forecasting and interpolation An examination of physics-aware deep learning models, including emulation of complex codes and model parametrizations Perfect for PhD students and researchers in the fields of geosciences, image processing, remote sensing, electrical engineering and

computer science, and machine learning, Deep Learning for the Earth Sciences will also earn a place in the libraries of machine learning and pattern recognition researchers, engineers, and scientists.

This book constitutes the thoroughly refereed proceedings of the 10th International Conference on Design Science Research in Information Systems and Technology, DESRIST 2015, held in Dublin, Ireland, in May 2015. The 22 full papers, 11 short papers and 10 short papers describing prototypes and products were carefully reviewed and selected from 111 submissions. The papers are organized in topical sections

on design science research in action; meta perspectives; data mining and analytics; emerging themes; design practice and design thinking; and prototypes.

Control2019 3rd International Conference on Trends in Electronics and Informatics (ICOEI)ICOEI 2019 will provide an outstanding international forum for sharing knowledge and results in all fields of Engineering and Technology The primary goal of the conference is to promote research and developmental activities in Electronics and Informatics Another goal is to promote scientific information interchange between researchers, developers, engineers, students, and practitioners working in India and abroad The conference is organized to make it an ideal platform for people to share views and experiences in Electronics, Informatics and related areas2018 International Conference on Advances in Computing, Communications and

Informatics (ICACCI)To provide an international forum for the exchange of ideas among interested researchers, students, developers, and practitioners in the areas of computing, communications, and informaticsRollout, Policy Iteration, and Distributed Reinforcement Learning "The healthcare industry is undergoing a transformation of exponential change and opportunity that bears daunting challenges. To incorporate groundbreaking technologies, we as leaders are building our people, skills, cultures, and leadership to capitalize on and refine those technologies to address the urgent needs of today and tomorrow. This timely work is written by a world-class multi-disciplinary team in Healthcare IT, medicine, and business.

This breadth and collaboration is what's required to deliver this very timely cross-functional discussion and fantastic action planning resource. This book is required reading for any organization looking to lead the next wave of healthcare technology to improve care quality, patient safety, and clinician satisfaction to help us save more lives and keep people healthy across the entire care continuum." Aaron Miri Chief Information Officer for Dell Medical School and UT Health Austin & Co-Chair for the U.S. Department of Health and Human Services' Federal Health IT Advisory Committee An actionable and practical resource to accelerate mobile computing in medicine: No topic in healthcare technology is more urgent and yet more elusive to date than mobile computing in

medicine. It adheres to no boundaries, stagnates in silos, and demands not just the attention of dedicated professionals, but also teams of teams. A rich resource, this book shares hard-won lessons and primary research for better understanding, management, and execution of key mobile computing initiatives in medicine (that can save patient lives by reducing delays in medical information). It provides an action planning reference guide for mobile medicine stakeholders, including health system and insurance decision makers, clinicians, and investors. Foundational and groundbreaking in its knowledge set and combination, it also provides a unique and rare perspective, drawing from 27 distinct experts across disciplines from legal to medicine,

informatics, organizational psychology, cybersecurity to engineering - the building blocks needed to catalyze a comprehensive mobile medicine strategy for your health system or investment thesis. Considering we lose a family member, colleague, or someone else every nine minutes due to a delay in medical information according to the Institute for Healthcare Improvement, this book makes significant strides in efficiently conveying foundational knowledge that can contribute to implementing mobile computing safely and cost-effectively while improving clinician and patient experiences in healthcare. These insights will accelerate the reader's ability to conceptualize the real opportunities via mobile computing in medicine. FEATURES: Provides a

current understanding of why the adoption of mobile medicine has been meager to date and what gaps and opportunities exist Delivers proven management and leadership techniques from experts doing the work of building IT, security, and informatics organizations and workflows in preparing for mobile medicine Describes how to navigate cultures of related professions essential to mobile medicine, including insights from physicians, engineers, informaticists, lawyers, IT researchers, organizational psychologists, board directors, researchers, cybersecurity leaders, and other key stakeholders Demystifies the latest, up-to-date federal rules, laws, and regulations impacting and enabling the promise of mobile medicine Highlights how to best mitigate

risks for the development and deployment of mobile medicine and next-generation innovations, such as wearable robotics into the clinical environment Offers resources and tools to enable unprecedented collaboration across diverse professionals including, but not limited to, functional and work differences as well as skillsets and other factors of talent diversity required to bring mobile medicine to life Contributes a working understanding backed by primary research for how evidence-based practice, an expectation in medicine, can also be leveraged in healthcare technology leadership to future proof both CIO and executive leadership philosophy and methodology *Social Informatics* CRC Press
This book constitutes the refereed

proceedings of the 5th International Conference on Social Computing, Behavioral-Cultural Modeling and Prediction, held in College Park, MD, USA, in April 2012. The 43 revised papers presented in this volume were carefully reviewed and selected from 76 submissions. The papers cover a wide range of topics including economics, public health, and terrorist activities, as well as utilize a broad variety of methodologies, e.g., machine learning, cultural modeling and cognitive modeling.

 Analyzing Social Media Networks with NodeXL offers backgrounds in information studies, computer science, and sociology. This book is divided into three parts: analyzing social media, NodeXL tutorial, and social-media network analysis case studies. Part I provides background in the history and concepts of social media and social networks. Also included here is social network analysis, which flows from measuring, to mapping, and modeling

collections of connections. The next part focuses on the detailed operation of the free and open-source NodeXL extension of Microsoft Excel, which is used in all exercises throughout this book. In the final part, each chapter presents one form of social media, such as e-mail, Twitter, Facebook, Flickr, and Youtube. In addition, there are descriptions of each system, the nature of networks when people interact, and types of analysis for identifying people, documents, groups, and events. Walks you through NodeXL, while explaining the theory and development behind each step, providing takeaways that can apply to any SNA Demonstrates how visual analytics research can be applied to SNA tools for the mass market Includes case studies from researchers

who use NodeXL on popular networks like email, Facebook, Twitter, and wikis Download companion materials and resources at <https://nodexl.codeplex.com/documentation>
2018 3rd International Conference on Pattern Analysis and Intelligent Systems (PAIS) Springer
International conference on Electronics and Sustainable Communication Systems (ICESC 2020) is one of the eminent conferences organized by Hindustan Institute of Technology, Coimbatore, India dedicated to drive innovation in nearly every aspect of electronic and communication systems The primary aim of ICESC 2020 is to promote the high quality and sustainable research works in an international

platform of scientists, researchers, and industrialists by bringing together the state of the art research work in different facets of electronics and communication systems and discuss, share and exchange the research ideas under one common platform Prospective authors are invited to contribute and address different themes and topics of the conference

Unanticipated Gains Springer Science & Business Media

This book constitutes the refereed conference proceedings of the Third International Conference on Big Data Analytics, BDA 2014, held in New Delhi, India, in December 2014. The 11 revised full papers and 6 short papers were carefully reviewed and selected from 35 submissions and cover topics on media

analytics; geospatial big data; semantics and data models; search and retrieval; graphics and visualization; application-specific big data.

In the digital age, numerous technological tools are available to enhance business processes. When these tools are used effectively, knowledge sharing and organizational success are significantly increased. Social Media Marketing: Breakthroughs in Research and Practice contains a compendium of the latest academic material on the use, strategies, and

applications of social media marketing in business today. Including innovative studies on email usage, social interaction technologies, and internet privacy, this publication is an ideal source for managers, corporate trainers, researchers, academics, and students interested in the business applications of social media marketing.

Overcoming People, Culture, and Governance SAGE

There has been a noticeable shift in the way the news is accessed and consumed, and most importantly, the rise of fake news has become a common occurrence in the media. With news becoming more accessible as technology advances, fake news can spread rapidly and successfully through social media, television, websites, and other online

sources, as well as through the traditional types of newscasting. The spread of misinformation when left unchecked can turn fiction into fact and result in a mass misconception of the truth that shapes opinions, creates false narratives, and impacts multiple facets of society in potentially detrimental ways. With the rise of fake news comes the need for research on the ways to alleviate the effects and prevent the spread of misinformation. These tools, technologies, and theories for identifying and mitigating the effects of fake news are a current research topic that is essential for maintaining the integrity of the media and providing those who consume it with accurate, fact-based information. The Research Anthology on Fake News, Political Warfare, and

Combatting the Spread of Misinformation contains hand-selected, previously published research that informs its audience with an advanced understanding of fake news, how it spreads, its negative effects, and the current solutions being investigated. The chapters within also contain a focus on the use of alternative facts for pushing political agendas and as a way of conducting political warfare. While highlighting topics such as the basics of fake news, media literacy, the implications of misinformation in political warfare, detection methods, and both technological and human automated solutions, this book is ideally intended for practitioners, stakeholders, researchers, academicians, and students interested in the current surge of fake

news, the means of reducing its effects, and how to improve the future outlook.

Social Computing, Behavioral-Cultural Modeling and Prediction IGI Global

Deep learning is often viewed as the exclusive domain of math PhDs and big tech companies. But as this hands-on guide demonstrates, programmers comfortable with Python can achieve impressive results in deep learning with little math background, small amounts of data, and minimal code. How? With `fastai`, the first library to provide a consistent interface to the most frequently used deep learning applications. Authors Jeremy Howard and Sylvain Gugger, the creators of `fastai`, show you how to train a model on a wide range of tasks using `fastai` and `PyTorch`.

You'll also dive progressively further into deep learning theory to gain a complete understanding of the algorithms behind the scenes. Train models in computer vision, natural language processing, tabular data, and collaborative filtering. Learn the latest deep learning techniques that matter most in practice. Improve accuracy, speed, and reliability by understanding how deep learning models work. Discover how to turn your models into web applications. Implement deep learning algorithms from scratch. Consider the ethical implications of your work. Gain insight from the foreword by PyTorch cofounder, Soumith Chintala.

• The 24 chapters contained in this volume provide diverse but also congruent perspectives on future foci for research into postgraduate education and supervision in the knowledge

society. The chapters move from deliberations on challenges for postgraduate supervision at macro level (such as the pressure to increase postgraduate output and the implications of increasingly managerialist institutions) to meso level matters (the form and function of postgraduate education in specific countries) to the micro (rich case studies of individual institutions, programmes and supervisors).
