Master the LPN/LVN's role and responsibilities in medical-surgical nursing! With coverage organized by body systems, *Adult Health Nursing, 9th Edition* provides an essential guide to nursing care for patients with common disorders. Through use of the nursing process, you will develop clinical judgment skills to assess patient needs, develop nursing care plans, and plan effective nursing interventions. Case studies provide practice with critical thinking and clinical judgment, and new Next Generation NCLEX®-format questions help you apply theory to

practice. Written by nursing educators Kim Cooper and Kelly Gosnell, this text also helps you prepare for success on the NCLEX-PN® examination. Step-by-step instructions for skills show clearly defined nursing actions along with the rationales for each. Overview of Anatomy and Physiology begins each body systems chapter, and the Introduction to Anatomy and Physiology chapter provides a clear, basic understanding of the A&P that LPN/LVNs need to know. The nursing process is applied to the discussion of disorders, and is summarized at the end of each chapter. Nursing care plans use a case-study format to emphasize patient goals and outcomes, and include critical thinking questions at the end of each care plan. Evidence-Based Practice

boxes provide synopses of research articles that apply to nursing, along with nursing implications for the LPN/LVN. Safety Alert! boxes cover issues related to safe patient care in a variety of settings. Coordinated Care boxes promote comprehensive patient care with other members of the health care team, focusing on prioritization, assignment, supervision, collaboration, delegation, and leadership topics. Lifespan Considerations boxes provide age-specific information for the care of the patient. Older Adult Considerations boxes provide age-specific information for the care of the aging population, which is often the primary focus of the LPN/LVN nurse. Communication boxes illustrate communication strategies through real-life examples of nurse-

patient dialogue. Patient Teaching boxes focus on three-way communication among the nurse, patient, and family members, and include topics such as hospital discharge instructions. Health Promotion Considerations boxes highlight information on wellness and disease prevention, including infection control, diet, and pregnancy. Home Health Considerations boxes discuss issues facing patients and their caregivers in the home setting. Medication tables provide quick access to action, dosage, precautions, and nursing considerations for commonly used drugs. Get Ready for the NCLEX® Examination sections provide key points, review questions, and critical thinking activities to reinforce learning. Vision for Tomorrow SLACK Incorporated

The ability to see deeply affects how human beings perceive and interpret the world around them. For most people, eyesight is part of everyday communication, social activities, educational and professional pursuits, the care of others, and the maintenance of personal health, independence, and mobility. Functioning eyes and vision system can reduce an adult's risk of chronic health conditions, death, falls and injuries, social isolation, depression, and other psychological problems. In children, properly maintained eye and vision health contributes to a child's social development, academic achievement, and better health across

the lifespan. The public generally recognizes its reliance on sight and fears its loss, but emphasis on eye and vision health, in general, has not been integrated into daily life to the same extent as other health promotion activities, such as teeth brushing; hand washing; physical and mental exercise; and various injury prevention behaviors. A larger population health approach is needed to engage a wide range of stakeholders in coordinated efforts that can sustain the scope of behavior change. The shaping of socioeconomic environments can eventually lead to new social norms that promote eye and vision health. Making Eye Health a Population Health Imperative: Vision for Tomorrow proposes a new population-centered framework to guide action and

coordination among various, and sometimes competing, stakeholders in pursuit of improved eye and vision health and health equity in the United States. Building on the momentum of previous public health efforts, this report also introduces a model for action that highlights different levels of prevention activities across a range of stakeholders and provides specific examples of how population health strategies can be translated into cohesive areas for action at federal, state, and local levels.

"Many Anatomy and Physiology (A&P) textbooks have been written, most of them are limited by the absence of a significant bank of self test material. This book fills that space by providing the student engaged in active learning opportunities to assess their learning in all the core areas of A&P. The explanatory feedback material following answers to the test questions is excellent. Now the student has a resource that actually guides them towards success. It will complement any course that includes introductory A&P. This book will be a very useful partner to any student new to the subject that is motivated to learn and do well." Jim Jolly, Head of Academic Unit for Long Term
