Competition Car Aerodynamics Langdon st Press

Aerodynamics is a science in itself, and is one of the most important factors in modern competition car design. This fully updated second edition covers all aspects of aerodynamics, including both downforce and drag. This complex subject is explained in down-to-

earth terms, with the aid of numerous illustrations, including color CFD (Computational Fluid Dynamics) diagrams to demonstrate how aerodynamic devices work, as well as wind-tunnel studies.

Harvard professor,
Michael Porter has
been one of the most
influential figures in
strategic management
research over the last
three decades. He
infused a rigorous
theoretical framework
of industrial
organization
economics with the
then still embryonic
field of strategic
management and
elevated it to its
current status as an
academic discipline.
Porter's outstanding
career is also
characterized by its
cross-disciplinary
nature. Following his
most important work
on strategic
management, he then
made a leap to the

policy side and dealt
with a completely
different set of
analytical units. More
recently he has made a
foray into inner city
development,
environmental
regulations, and health
care services.
Throughout these
explorations Porter has
maintained his
integrative approach,
seeking a road that
links management
case studies and the
general model building
of mainstream
economics. With expert
contributors from a
range of disciplines
including strategic
management,
economic
development,
economic geography,
and planning, this book
assesses the
contribution Michael
Porter has made to
these respective

disciplines. It clarifies the sources of tension and controversy relating to all the major strands of Porter's work, and provides academics, students, and practitioners with a critical guide for the application of Porter's models. The book highlights that while many of the criticisms of Porter's ideas are valid, they are almost an inevitable outcome for a scholar who has sought to build bridges across wide disciplinary valleys. His work has provided others with a set of frameworks to explore in more depth the nature of competition, competitive advantage, and clusters from a range of vantage points.

Comfortably Unaware Haynes Publishing UK

This book seeks to examine the causes of escalation and de-escalation in intrastate conflicts. Specifically, the volume seeks to map the processes and dynamics that lead groups challenging existing power structures to engage in violent struggle; the processes and dynamics that contribute to the de-escalation of violent struggle and the participation of challengers in peaceful political activities; and the processes and dynamics that sustain and nurture this transformation. By integrating the latest ideas with richly presented case studies, this volume fills a gap in our understanding of the forces that lead to moderation and

constructive engagement in the context of violent, intrastate conflicts. This volume will be of great interest to students of conflict management, peace studies, conflict resolution, ethnic conflict and security studies in general.

With unapologetic disclosures, Oppenlander professes his concern for the state of the planet, while charging that many renown spokespersons who tout responsible and sustainable living are often mismanaging the information, or unwilling to tell the whole story. Richard Oppenlander supports a plant-based diet that he claims provides optimal health for our bodies and our planet. His book COMFORTABLY UNAWARE introduces us to our responsibility in global depletion, and

encourages us to think about our food choices with every bite.

Conflict Transformation and Peacebuilding

This fascinating book argues for a new way of looking at the world and at human systems, companies or (Western) society as a whole. Walter R.J. Baets argues that we should let go of our drive to control, manage and organize, in order to be able to create an ideal environment for continuous learning, both for ourselves and for our collaborators. Arguing in favour of a holistic management approach, and very much in opposition to the short-term shareholder value driven approaches that are popular today, Baets' book develops a logic founded in real

life observations, examples and cases that every reader will recognize in their daily practice. It guides the reader to understand an alternative paradigm and allows them finally to be able to work with the dynamics of business on a daily basis. A must-read for students of complexity, strategy and organizational behaviour, this well-researched, well-argued book skilfully guides the reader through this interesting subject.
