Psychology Library Editions: Social Psychology Psychology Press
 Originally published in 1988, this title presents a longitudinal research project 'Individual Development and Adjustment' (IDA), planned and implemented at the Department of Psychology, University of Stockholm. This title concerns the theoretical background of the project, the planning and collecting of data during the second phase of the project when the participants had reached adulthood, and the presentation of some empirical, illustrative studies based on the collected data.

Personal Project Pursuit MIT Press
 First published in 1986. Routledge is an imprint of Taylor & Francis, an informa company.

Handbook of Identity Theory and Research John Wiley & Sons
 This book was inspired by an intimate, stimulating, intellectually enriching conference that took place in Poland. However, the book is not a conference report. Rather, at the time of the conference, participants agreed that it would be worthwhile to create a volume representing the international state of knowledge in pro social behavior, and many of them agreed to write chapters. This volume is the outcome. The book contains chapters by outstanding researchers and scholars who have made substantial contributions to some aspect of scholarship about pro social behavior-helpfulness, generosity, kindness, cooperation, or other behavior that benefits people. The book concerns itself with how prosocial behavior comes

about and what influences contribute to or inhibit it; how prosocial behavior, or values and other personal characteristics that promote prosocial behavior, develop; how socialization, peer interaction, and other experiences contribute to development; and with the cognitive, emotional, and behavioral consequences of receiving help. Some chapters directly, and a number of them implicitly, concern themselves with applications of knowledge about prosocial behavior, particularly with the question of how cooperation and behavior that benefits other people can be promoted. The purpose of the book is in part to show where the field stands and what knowledge we have accumulated, and in part to suggest future directions and advance the field. It is a truly international book, with contributors from most countries where research on pro social behavior is being conducted.

Action and Self-Development

Psychology Press
 The relationship between the cognitive and social spheres of human functioning and their context has long been regarded by social and behavioural scientists as a central theoretical issue. By the early 1980s a number of empirical studies had further elucidated the nature of this relationship but no attempt had been made to present a coherent picture of the research and developments in this increasingly popular area of study. Originally published in 1982, the topics covered in this book filled the gap admirably. They present a view of the development of aspects of the self and of self-other relations and how these two lines of development interact within a given context. All the contributions attempt to portray the child's developing awareness

of the self in relation to the social world, but all consider it from different perspectives and in varying degrees of detail. This useful collection, by a number of well-known contributors, should still be of great value to students of developmental and social psychology. *The Life Span* Oxford University Press [Publisher-supplied data] An international cast of the top names in developmental research explore how researchers can use group data to understand individual patterns and pathways over time. Since the dominant statistical models and sampling methods do not accurately reflect and capture the way in which individuals change, but rather statistically treat the individual as an unchanging constant (e.g., as if a 2-year-old's personality is identical to a 30-year-old's). After an introduction to this methodological dilemma, the book shows how empirical procedures can be employed in a stepwise progression to permit a focus on individual children. The next chapter explains how individuals versus variables are not stable over time and how to adjust analysis to reflect this. This is followed by a discussion that outlines some of the key technical details and illustrates the choices that confront researchers in the application of these procedures to longitudinal data sets. Subsequent chapters cover such issues as the value of methodological focus on extreme groups, such as fearful and very exuberant children; ways to analyze personality changes over time, how to combine the strengths of variable-oriented and categorical procedures to achieve a focus on individuals; how to correlate retrospective reports with actual events, and how developmental methods can be brought into line with the study of individual pathways. Each

chapter is followed by a commentary and discussion by Marian Radke Yarrow. *Methods and Models for Studying the Individual* offers readers a guide for evaluating the methodological merits of the different strategies for studying individuals.

Social-Cognitive Development in Context Psychology Press

This text provides an in-depth look at the science of human development ; highlighting theories and research that have useful applications for individuals working in fields such as education, counseling, and social work. The main purpose of this book is to provide the reader with information that can be translated into professional best practice applications. Throughout the text reflects the contemporary view that life span development is a process deeply embedded within and inseparable from the context of family, social network, and culture. Because the book is designed for graduate students, most topics, especially those that have special relevance to helping professionals, are covered in greater depth than in a typical life span text.

The Psychology of Control and Aging (Psychology Revivals) Psychology Press

This follow-up to *The Moral Domain* carries forward the exploration of new ways of modeling moral behavior. This follow-up to *The Moral Domain* carries forward the exploration of new ways of modeling moral behavior. Whereas the first volume emphasized the work of Lawrence Kohlberg and the tradition of cognitive development, *The Moral Self* presents a paradigm that also incorporates noncognitive structures of selfhood. The concerns of the sixteen essays include the diversity of moral outlooks, the dynamics of creating a moral self, cognitive and noncognitive

prerequisites of the psychological-development of autonomy and moral competence, and motivation and moral personality. Contributors and ContentPart I, Conceptual Foundations: Harry Frankfurt, Amélie Oksenberg Rorty, Ernst Tugendhat, Ernest S. Wolf, Thomas Wren - Part II, Building a New Paradigm: Augusto Blasi, Anne Colby, William Damon, Helen Haste, Mordecai Nisan, Gil G. Noam, Larry Nucci, John Lee - Part III, Empirical Investigation: Monika Keller, Wolfgang Edelstein, Lothar Krappmann, Leo Montada, Gertrud Nunner-Winkler, Ervin Staub

L'Abate's theory is firmly rooted in the social and existential exigencies of everyday life as experienced within the five fundamental contexts of home, work, leisure, the marketplace (grocery shopping, barbershops, malls, etc.), and in transit.

Human Behavior and Environment
Psychology Press

The Communication Yearbook annuals originally published between 1977 and 2009 publish diverse, state-of-the-discipline literature reviews that advance knowledge and understanding of communication systems, processes, and impacts across the discipline. Topics dealt with include Communication as Process, Research Methodology in Communication, Communication Effects, Taxonomy of Communication and European Communication Theory, Information Systems Division, Mass Communication Research, Mapping the Domain of Intercultural Communication, Public Relations, Feminist Scholarship, Communication Law and Policy, Visual Communication, Communication and Cross-Sex Friendships Across the Life

Cycle, Television Programming and Sex Stereotyping, InterCultural Communication Training, Leadership and Relationships, Media Performance Assessment, Cognitive Approaches to Communication.

The Promise of Adolescence John Wiley & Sons

Social development over one's lifetime is a complex area that has received considerable attention in the psychological, social-psychological, and sociological literature over the years. Surprisingly~ however, since 1969, when Rand McNally published Goslin's Handbook of Socialization, no comprehensive statement of the field has appeared in book form. Given the impressive data in this area that have been adduced over the last two decades, we trust that our handbook will serve to fill that gap. In this volume we have followed a lifespan perspective, starting with the social interactions that transpire in the earliest development stages and progressing through childhood, adolescence, adulthood, and, finally~ one's senior years. In so doing we cover a variety of issues in depth. The book contains 21 chapters and is divided into five parts: I, Theoretical Perspectives; II, Infants and Toddlers; III, Children and Adolescents; IV, Adults; and V, The Elderly. Each of the parts begins with introductory material that reviews the overall issues to be considered. Many individuals have contributed to the final production of this handbook. Foremost are our eminent contributors, who graciously agreed to share with us their expertise. We also thank our administrative and technical staff for their assistance in carrying out the day-to-day tasks necessary to complete such a project. Finally~ we thank Eliot Werner, Executive Editor at Plenum, for his

willingness to publish and for his tolerance for the delays inevitable in the development of a large handbook.

Peer Rejection in Childhood Springer Science & Business Media

The Dynamics of Transitional Justice draws on the case of East Timor in order to reassess how transitional justice mechanisms actually play out at the local level. Transitional justice mechanisms - including trials and truth commissions - have become firmly entrenched as part of the United Nations 'tool-kit' for successful post-conflict recovery. It is now commonly assumed that by establishing individual accountability for human rights violations, and initiating truth-seeking and reconciliation programs, individuals and societies will be assisted to 'come to terms' with the violent past and states will make the 'transition' to peaceful, stable liberal democracies. Set against the backdrop of East Timor's referendum and the widespread violence of 1999, this book interrogates the gap between the official claims made for transitional justice and local expectations. Drawing on a wide range of sources, including extensive in-depth interviews with victims/survivors, community leaders and other actors, it produces a nuanced and critical account of the complex interplay between internationally-sponsored trials and truth commissions, national justice agendas and local priorities. The Dynamics of Transitional Justice fills a significant gap in the existing social science literature on transitional justice, and offers new insights for researchers and practitioners alike.

The Moral Self Psychology Press

The new edition of *The Developing Person Through the Lifespan* combines theory and the most up-to-date research

with practical illustration in order to engage readers in the study of development. It addresses the fundamental issues from a chronological point of view, and covers the entirety of the lifespan (not just infancy or adolescence). The book's enhanced pedagogy works alongside the author's lively narrative voice to ensure that this edition remains as user-friendly, if not more so, than its predecessors.

Studying Individual Development in An Interindividual Context National Academies Press

What are the changes we see over the life-span? How can we explain them? And how do we account for individual differences? This volume continues to examine these questions and to report advances in empirical research within life-span development increasing its interdisciplinary nature. The relationships between individual development, social context, and historical change are salient issues discussed in this volume, as are nonnormative and atypical events contributing to life-span change.

The Development of Social Cognition SAGE Publications, Incorporated

A comprehensive review of the practice and most recent research on coaching *Coaching Researched: Using Coaching Psychology to Inform Your Research and Practice* brings together in one authoritative volume a collection to the most noteworthy papers from the past 15 years from the journal *International Coaching Psychology Review*. Firmly grounded in evidence-based practice, the writings are appropriate for the burgeoning number of coaching researchers and practitioners in business, health, and education. The contributors offer a scientific framework to support coaching's pedagogy and

they cover the sub-specialties of the practice including executive, health, and life coaching. The book provides a comparative analysis in order to differentiate coaching from other practices. Comprehensive in scope, the book covers a wide-range of topics including: the nature of coaching, coaching theory, insights from recent research, a review of various coaching methods, and thoughts on the future of coaching. This important book: Offers a collection of the most relevant research in the last 15 years with commentary from the International Coaching Psychology Review journal's chief editor Contains information on both the theory and practice of the profession Includes content on topics such as clients and coaching, an integrated model of coaching, evidence-based life coaching, and much more Presents insights on the future of coaching research Written for students, researchers, practitioners of coaching in all areas of practice, Coaching Researched offers an accessible volume to the most current evidenced-based practice and research. *Development and Maintenance of Prosocial Behavior* Psychology Press Individual Development and Social Change: Explanatory Analysis represents a convergence of three lines of emphasis now visible in developmental research and theory building. The three are (1) the life course as a focus for the study of development and social change, and their interrelationships; (2) the life-span orientation to the study of individual development, with its acknowledgment of the salience of contextual features for understanding development; and (3) the growth of methodological innovations that provide more appropriate and powerful ways of exploiting data gathered to describe and explain

developmental change processes. The book opens with a study on how major cultural change originates and unfolds over time. This is followed by separate chapters on the use of sequential designs for explanatory analyses; evolutionary aspects of social and individual development; the concepts of the theory of causal and weak causal regressive dependence; and the concepts of age, period, and cohort from the perspective of developmental psychology. Subsequent chapters examine development and aging as lifelong processes of historical populations; the methodological integration of natural and cultural science perspectives in developmental psychology; and application of the multifaceted methodology to the mutuality of constraint between sociocultural group and individual dynamics.

Individual Development from an Interactional Perspective

(Psychology Revivals) CUP Archive Identity is one of the most extensively studied constructs in the social sciences. Yet, despite the wealth of findings across many disciplines, identity researchers remain divided over such enduring fundamental questions as: What exactly is identity, and how do identity processes function? Do people have a single identity or multiple identities? Is identity individually or collectively oriented? Personally or socially constructed? Stable or constantly in flux? The Handbook of Identity Theory and Research offers the rare opportunity to address the questions and reconcile these seeming contradictions, bringing unity and clarity to a diverse and fragmented literature. This exhaustive reference work emphasizes the depth and complexity of identity processes and

domains and presents perspectives from many different theoretical schools and empirical approaches. Contributing authors provide perspectives from psychology (e.g., narrative, social identity theory, neo-Eriksonian) and from other disciplines (e.g., sociology, political science, ethnic studies); and the editors highlight the links between chapters that provide complementary insights on related subjects. In addition to covering identity processes and categories that are well-known to the field, the Handbook tackles many emerging issues, including: - Identity development among adopted persons. - Identity processes in interpersonal relationships. - Effects of globalization on cultural identity. - Transgender experience and identity. - Consumer identity and shopping behavior. - Social identity processes in xenophobia and genocide. The Handbook of Identity Theory and Research lends itself to a wealth of uses by scholars, clinicians, and graduate students across many disciplines, including social, developmental, and child/school psychology; human development and family studies; sociology; cultural anthropology; gender, ethnic, and communication studies; education; and counseling.

Library of Personal Analysis and Development CUP Archive

This book is about building metaphorical bridges--all sorts of bridges. At the most basic level, it concerns the bridges that individuals build to understand the events that they experience--the bridges that connect the events in the mind's eye. At another level, it is about bridges that interconnect findings and theoretical frameworks concerning event comprehension and representation in different age groups, ranging from infancy to adulthood. Finally, it is about

building bridges between researchers who share interests, yet may not ordinarily even be aware of each other's work. The success of the book will be measured in terms of the extent to which the contributors have been able to create a picture of the course of development across a wide span in chronological age, and across different types of events, from the fictional to the actual. The individuals whose work is represented in this book conduct their work in a shared environment--they all have an intellectual and scholarly interest in event comprehension and representation. These interests are manifest in the overlapping themes of their work. These include a focus on how people come to temporally integrate individual "snapshots" to form a coherent event that unfolds over time, to understand cause and effect, and to appreciate the role of the goal of events. Another overlapping theme involves the possibility of individual differences. These themes are apparent in work on the early development of representations of specific episodes and autobiographical memories, and comprehension of complex events such as stories involving multiple characters and emotions. The editors of this volume had two missions: * to create a development span by bringing together researchers working from infancy to adulthood, and * to create a bridge between individuals working from within the text comprehension perspective, within the naturalistic perspective, and with laboratory analogues to the naturalistic perspective. Their measure of success will be the extent to which they have been able to create a picture of the course of development across a wide span in chronological age, and across different types of events--from

fictional to actual.

Empathy and Its Development Springer Science & Business Media

Originally published in 1986, the central topic of this book is the analysis and application of control-related beliefs and behaviours for theory and practice in the psychology of aging. The volume was written for two specific interrelated purposes aimed at cross-fertilization between the psychology of control and the field of gerontology. The first purpose was to summarise available research and theory on the psychology of control for researchers and professionals interested in gerontology at the time. The second was to enrich the field of the psychology of control. Cognitive Perspectives on Children's Social and Behavioral Development Routledge

This volume is an outgrowth of contemporary research on development over the adult lifespan, which by now has burgeoned and developed both nationally and internationally. However, for us, the impetus to be involved in this area was spawned and nurtured by our initial association with the Society for Research in Adult Development (SRAD) with its origins some 15 years ago by Michael Commons and his associates in Cambridge, Massachusetts.

Through the good will and support of this society, we also became, and are still, heavily involved with the *Journal of Adult Development* and the Kluwer-Plenum Monograph Series on Adult Development and Aging, of which this volume is a companion. Many of the contributions in the volume are from SRAD members, who consistently adhere to a focus on positive adult development. Their chapters have been complemented by pieces from other researchers, who have

adopted more mainstream approaches to adult development and/or aging. Regardless of the particular approach and/or focus of the chapter, all the work reported herein supports the relatively recent idea that development is not restricted to children and adolescents but continues throughout the adult lifespan in ways that we never envisioned some 20 years ago. Thus, the volume represents state-of-the-art theory, research, and practice on adult development, which has the potential to occupy us all for some time to come.

Developmental Spans in Event Comprehension and Representation

Academic Press

Adolescence "beginning with the onset of puberty and ending in the mid-20s" is a critical period of development during which key areas of the brain mature and develop. These changes in brain structure, function, and connectivity mark adolescence as a period of opportunity to discover new vistas, to form relationships with peers and adults, and to explore one's developing identity. It is also a period of resilience that can ameliorate childhood setbacks and set the stage for a thriving trajectory over the life course. Because adolescents comprise nearly one-fourth of the entire U.S. population, the nation needs policies and practices that will better leverage these developmental opportunities to harness the promise of adolescence "rather than focusing myopically on containing its risks. This report examines the neurobiological and socio-behavioral science of adolescent development and outlines how this knowledge can be applied, both to promote adolescent well-being, resilience, and development, and to rectify structural barriers and

inequalities in opportunity, enabling all adolescents to flourish.
