MCMAHON BAILEY

Diversity Springer

Current understandings of ageing and diversity are impoverished in three main ways. Firstly, with regards to thinking about what inequalities operate in later life there has been an excessive

preoccupation with economic resources. On the other hand, less attention has been paid to cultural norms and values, other resources, wider social processes, political participation and community engagement. Secondly, in terms of thinking about the 'who' of inequality, this has so far been limited to a very narrow range of minority populations. Finally, when considering the 'how' of inequality, social gerontology's theoretical analyses remain under-

developed. The overall effect of these issues is that social gerontology remains deeply embedded in normative assumptions which serve to exclude a wide range of older people. Ageing, Diversity and Equality aims to challenge and provoke the above described normativity and offer an alternative approach which highlights the heterogeneity and diversity of ageing, associated inequalities and their

intersections. The Open Access version of this book, available at <https://www.taylorfrancis.com/books/9781351851329>, has been made available under a Creative Commons Attribution-Non Commercial-No Derivatives 4.0 licence.

Diversity and Aging in the 21st Century
John Wiley & Sons

According to a recent population report by the United Nations, "in most countries, older women greatly outnumber older men. In many cases, the difference is so large that the concerns of the older population should in fact be viewed primarily as the concerns of older women." Internationally, the concerns of older women emanate from the unique gendered challenges they experience because they are more likely to be widowed, poor, have lower educational attainment, fewer skills, restricted inheritance and land ownership, and have fewer sexual rights. To add to this negative scenario, ageist and sexist attitudes in both developed and developing societies throughout the world tend to categorize older women as non-contributing burdens even though they are

in fact often highly productive and bear most of the burdens of family caregiving responsibilities. In spite of their majority status and list of concerns, older women are less likely to be equally represented in the literature on aging. This edited book introduces the reader to the diversity, challenges and contributions of older women in several of the major regions of the world. This book was originally published as a special issue of the *Journal of Ethnic and Cultural Diversity in Social Work*.

The University of the Third Age and Active Ageing Brush Education

As the older population in the United States is becoming more racially and ethnically diverse, it is important to understand the characteristics, the potential, and the needs of this population. In this new and fully revised edition of *Aging and Diversity*, Chandra Mehrotra and Lisa Wagner address key topics in diversity and aging, discussing how the aging experience is affected by not only race and ethnicity but also gender, religious affiliation, social class, rural-urban community location, and sexual orientation and gender identity. Taking

this broad view of human diversity allows the authors to convey some of the rich complexities facing our aging population – complexities that provide both challenges to meet the needs of a diverse population of elders and opportunities to learn how to live in a pluralistic society. Mehrotra and Wagner present up-to-date knowledge and scholarship about aging and diversity in a way that engages readers in active learning, placing ongoing emphasis on developing readers' knowledge and skills, fostering higher order thinking, and encouraging exploration of personal values and attitudes.

The Psychology of Aging: Contemporary Research (First Edition) Rowman & Littlefield

A leading expert in the science of healthy aging, Dr. Eric B. Larson offers practical advice for growing old with resilience and foresight. More than just canned advice, *Enlightened Aging* proposes a path to resilience—one that's proven to help many stave off disability until very old age. The steps on this path include pro-activity, acceptance, and building and maintaining good physical, mental, and social health. Using inspiring stories from Dr. Larson's

experiences with study participants, patients, friends, and relatives, *Enlightened Aging* will help readers determine what their paths can look like given their own experiences and circumstances. It informs readers of the scientific evidence behind new perspectives on aging. It inspires readers with stories of people who are approaching aging with enlightened attitudes. It offers advice and resources for readers to build their own reserves for old age. It recommends ways for readers to work with their doctors to stay as healthy as possible for their age. And it offers ideas for building better communities for our aging population. While especially relevant to the baby boom generation, this work is really for people of all ages looking for encouragement and wise counsel in order to live a long, active life.

Technologies for Active Aging IOS Press

This new edition has been completely rewritten and includes chapters that address key topics in diversity and aging: research methods, psychological aging; health beliefs, behaviors, and services; health disparities; informal and formal

care for older persons; work and retirement; religious affiliation and spirituality; and death, dying, and bereavement. Taking a broad view of diversity, Mehrotra and Wagner discuss elements of diversity such as gender, race or ethnicity, religious affiliation, social class, rural-urban community location and sexual orientation. Including these elements allows them to convey some of the rich complexities of our diverse culture - complexities that provide both challenges to meet the needs of diverse population and opportunities to learn how to live in a pluralistic society. Throughout the book, Mehrotra and Wagner present up-to-date knowledge and scholarship in a way that engages readers in active learning. Rather than simply transmitting information, the authors place ongoing emphasis on developing readers' knowledge and skills; fostering higher order thinking and encouraging exploration of personal values and attitudes. Distinctive features of the book include: Opening vignettes for each chapter that present a sampling of how the issues to be discussed apply to diverse elders. Active learning experiences that

invite readers to interview diverse elders, conduct internet searches, and give an analysis of a case study. Quizzes at the end of the chapters help readers ascertain the extent to which they have learned the material; the key for each quiz includes details about correct and incorrect responses so that additional learning can occur. *Aging and Diversity Online* boxes interspersed throughout the book provide internet resources that readers may use to find new research and publications.

Suggested readings and audiovisual resources given at the end of each chapter serve as a guide to additional information on topics covered in the chapter. This approach of presenting the material will help the readers understand and apply key concepts and principles in ways that will not only improve the lives of older people they serve, but will also enhance their own aging experience.

Aging, Place, and Health NYU Press

This edited collection takes a multi-disciplinary approach to the 'Active Ageing' agenda to enable readers to consider the implications of this phenomenon for the law, the workplace, and for working lives from a holistic

perspective. Challenges of Active Ageing brings together academics working throughout Europe from different disciplines including law, industrial relations, human resource management and occupational psychology to explore and debate the challenges of the 'Active Ageing' agenda for equality law and management practice. Also including shorter contributions from law, human resource management, trade union and other practitioners, this book aims to fully reflect how organizations can adjust their practices to respond to the challenge of an aging population and extended working lives.

Abstracts for the 8th World Congress on Aging and Physical Activity 2012 Bookbaby
Aging, Place, and Health: A Global Perspective examines the interplay of biological, social, and environmental factors affecting the health and well-being of aging individuals, their families, and communities. With a strong interdisciplinary focus, this book provides a clear, coherent structure to address the diversity of topics in this increasingly vital field. The second edition maintains the ecological approach using the same

framework as in the first edition. The ecological model serves as a template for the organization of the book. The new edition provides a more global focus and introduces new topics such as the impact of technology. This edition also introduces a new co-editor as well as specific chapters prepared by leading experts in the field.

Age Friendly Springer Publishing Company
 The challenge of population aging requires innovative approaches to meet the needs of increasing numbers of older people. Emerging information and communication technologies (ICTs), such as pervasive computing and ambient assistive technology, have considerable potential for enhancing the quality of life of many older people by providing additional safety and security while also supporting mobility, independent living, and social participation. The proposed book will be a landmark publication in the area of technology and aging that will serve as a statement of the current state-of-the-art and as a pointer to directions for future research and emerging technologies, products, and services.

Diversity & Aging in the 21st Century

Springer Nature

The volume is divided into two parts. Contributions in the first section raise questions about the meanings of age and age diversity, as well as how and when age matters in organisations. The second part of the book examines the role and contribution of HR practices in forging an age-inclusive workplace.

The Many Faces of Aging Cognella Academic Publishing

This comparative resource charts the interface between the University of the Third Age (U3A) movement and active ageing, and in doing so, offers a comprehensive and thorough understanding of what U3A means in different geographical and sociocultural contexts. After first providing introductory chapters to introduce the U3A movement and active ageing in global perspective and tracing the origins of U3As in France, the book sets off charting the international development of U3As in both European and Asian-Pacific contexts. Deliberately, the book moves away from the dominant Anglo-centric US- and UK-rooted analyses of U3As to account for contexts of different political ideology, sociocultural values,

geography, and degrees of urbanisation and industrialisation. Lastly, it thematises foreseeable issues, concerns, and predicaments that the global U3A movement faces while meeting the challenges and seizing the opportunities presented by active ageing. The chapters' comparative perspectives encompass:

Origins and development: The Francophone model of U3As
 The development and characteristics of U3As in European and Asian-Pacific geographies
 From social welfare to educational gerontology: U3As in China, Russia, Taiwan, Malaysia and South Korea
 U3As in Italy, Spain and Sweden: A dynamic, flexible, and accessible learning model
 Late-life learning for social inclusion: U3As in Poland, Iceland, United Kingdom, and Malta
 The U3A movement in Australia: From statewide networking to community engagement
 Cross-cultural perspectives on U3As: The case of Thailand
 The University of the Third Age and Active Ageing boasts welcome contributions to the scholarship on the different histories, structures, and challenges posed by national U3As. Readers from a variety of backgrounds and research interests

including gerontology, geriatrics, active ageing, older adult learning, comparative education and educational technology will find this a necessary and valuable resource in better understanding a globalised U3A world. "The University of the Third Age and Active Ageing: European and Asian-Pacific Perspectives contributes to the deep well of histories, experiences, structures, accomplishments and problems of national U3As. It emerges as a tapestry of extraordinary research that offers to guide the U3A movement as it soon enters its fiftieth year of existence." - Prof. Stephen Katz. Trent University

[Ethnicity and Old Age](#) Emerald Group Publishing
 Winner of the Richard Kalish Innovative Publication Award 2021. Part of the Ageing in a Global Context series, this book proposes a new research agenda for scholarship that focuses on ethnicity, race and old age. It argues that in a time of increased international migration, population ageing and ethno-cultural diversity, scholarly imagination must be expanded as current research frameworks are becoming obsolete. By bringing attention to the way that ethnicity and

race have been addressed in research on ageing and old age, with a focus on health inequalities, health and social care, intergenerational relationships and caregiving, the book proposes how research can be developed in an ethnicity astute and diversity informed manner.

Diversity and Aging in the Social Environment Routledge

In an attempt to understand the meaning of ageing and the treatment of the aged in different cultures, seven anthropologists have made studies of 10 communities on four continents - the results of which are presented in this book. The authors use both qualitative and statistical data to examine such issues as: health and well-being, perceptions of the life course, material resources, and functionality of elders. A unique resource, *The Aging Experience* provides a detailed comparative analysis of ageing worldwide.

Active Ageing? Perspectives from Europe on a Vaunted Topic Springer

"[This] book's unfading preoccupation with social context, social processes, and social structures distinguishes itself and greatly contributes to the discourse in gerontology." -The Gerontologist This

classic text, now in its fifth edition, is distinguished by its emphasis on social context, social processes, and social structures as part of a broader understanding of the sociology of aging and the life course. Presenting an objective view of the realities of aging, both positive and negative, the book examines aging from micro/macro, personal, community, societal, and global perspectives. This fifth edition describes important changes in the field of social gerontology and the growth in such topics as diversity, global aging, and the life course. It addresses major shifts in public policy, social institutions, and aging-related programming initiatives. There is a strong focus on the changing landscape of aging, particularly in regard to social engagement, employment and lifelong learning, enhanced health and independence, and livable communities for people of all ages. Additionally, the book includes new information on the Affordable Care Act and end-of-life issues. The text is uniquely organized, featuring theoretical discussions in each chapter and topical essays between chapters. Critical thinking and review questions

foster an in-depth understanding of the material. Written in an engaging style, the text is for graduate and upper-level undergraduate students; it is also used effectively in introductory gerontology classes. In addition to an Instructor's Manual, the fifth edition now includes Power-Point slides. NEW TO THE FIFTH EDITION: Provides updated data on aging and baby boomers in the United States and worldwide. Presents expanded focus on baby boomers' impact on the larger society. Discusses major public policy changes and innovative services and programs affecting older adults. Uses detailed examples to illustrate the challenges of sorting out age, period, and cohort effects in research on aging. Covers the Affordable Care Act and up-to-date information on Medicare. Features new information on end-of-life issues. Presents provocative essays on positive and contemporary issues not typically covered, including love, sex, creativity, media representations, LGBT aging, and crime. Focuses on enhanced health and independence and aging-in-place initiatives. Provides learning objectives in each chapter and web-based

extracurricular activities. Includes PowerPoint slides in addition to an Instructor's Manual. Self-Determination Theory and Healthy Aging Routledge. Age Friendly: Ending Ageism in America is a rallying call to make the United States a more equitable and just nation in terms of age. "Age friendliness" means being inclusive towards older people as workers, consumers, and citizens, something that can't be said to exist today. The United States and, especially, Big Business, are notoriously age-unfriendly places, a result of our obsession with youth. Virtually all aspects of everyday life in America will be impacted by the doubling or tripling of the number of older people over the next two decades, more reason to adopt age friendliness as a cause. Age Friendly shows how large companies are in an ideal position to address the aging of America and, in the process, benefit from making their organizations more age friendly. Because of its economic power and commitment to diversity in the workplace, Big Business—specifically the Fortune 1000—has the opportunity and responsibility to take a leadership role in

changing the narrative of aging in America. The book shows that age friendliness offers the possibility of bridging gaps not just between younger and older people, but those based on income, class, race, gender, politics, and geography. More than anything else, *Age Friendly* presents a bold and counterintuitive idea—aging is a positive thing for businesses, individuals, and society as a whole—and we should embrace it rather than fear it. While ageism is a pervasive force in America that, like racism and gender discrimination, runs contrary to our democratic ideals, there is some good news. An age friendly movement is spreading in America and around the world as a growing number of cities and towns strive to better meet the needs of their older residents. As well, a concerted effort is being made to convince Big Business that an intergenerational workforce is in the best interests of not just older employees but the companies themselves. Age brings experience, perspective, and wisdom—just the right skill set for both short- and long-term decision-making. The aging of America

also presents major implications for businesses in terms of marketing to older consumers. Baby boomers are still the key to the economy despite marketers' focus on youth, much in part to their collective wealth and propensity to consume. Age friendly marketing thus makes much sense due to "the longevity economy," i.e., the billions of dollars that older consumers spend each year and the goldmine that looms in the future as they become an even bigger percentage of the population. Finally, *Age Friendly* discusses how more corporations are pursuing social responsibility in addition to maximizing profits—an ideal opportunity for corporations to demonstrate good citizenship by supporting age friendliness on a local, state, or national level. *Age Diversity in the Workplace* Springer Publishing Company
The Psychology of Aging: Contemporary Research provides students with engaging scholarly articles that dismantle stereotypes commonly associated with aging and demonstrate the possibilities for active participation in later life. The carefully chosen readings expose students to stories of gains, losses, joys,

disappointments, and love. The book emphasizes the powerful effect of positivity on health and well-being and shows how a sense of control and empowerment can improve the lives of aging individuals. The anthology is divided into three distinct sections. In Section I, *Diversity and Stereotypes of Older Adults*, students learn about ageism, how it intersects with sexism, and disparities in the health care system for aging minorities. Section II, *The Opportunities of Aging*, features readings that discuss the transition from career to retirement, the creative arts and their relation to brain health in later life, financial competence in aging populations, and more. In the final section, *Challenges and Changes*, students read about family caregiving, depression in elder individuals, accommodating loss, and end-of-life preparation. Collected to provide students with a fresh perspective regarding aging, *The Psychology of Aging* is an ideal resource for courses in psychology and gerontology. *Silver Universe* SAGE Publications
 "An important contribution to the on-going national dialogue concerning the need for planning for an increasingly aged

population and its impact on our social, political, medical, economic institutions." -- Wisconsin Bookwatch "Based on their assessments of the levels of need for the long-term care among African-American, Latino, and non-Latino white older persons, the authors offer viable and attractive possible alternatives to institutionalization in the long-term care of the elderly." --Nurse Practitioner "A major contribution. Should be a part of every course on social gerontology, long-term care, the demography of aging, or formal/informal support networks of the elderly." --Robert Joseph Taylor, Institute for Social Research, University of Michigan America is getting older. By the year 2010, almost one in five Americans will be 65 years of age or older. The combined forces of low fertility and longer life spans among all racial and ethnic groups have resulted in a disproportionate increase in the number of individuals over 65 and an even faster increase in the proportion of those individuals over eighty-five. As a result, the nation faces an unprecedented challenge in addressing the economic, medical, and long-term care needs of this older population at the same time that it

assures the welfare of the young. The growth of the cost of the long-term care of the elderly is one of the major forces behind recent increases in Medicaid expenditures, and any reformed health care financing system will have to find ways of providing high quality long-term care to older Americans at a reasonable cost. In a racially and culturally diverse nation like the United States, official policy regarding the care of the elderly simply cannot be based on the assumption that the elderly are a culturally and socially monolithic population. The cultural, social, and economic situations of the elderly simply differ too greatly and the family's role in their care is affected by important cultural and social factors. In *Who Will Care for Us?* Ronald J. and Jacqueline L. Angel argue that policies based on the assumption of a homogenous population will fail to take advantage of the opportunities that ethnic and cultural diversity offer for the long-term care of the elderly. The authors examine the great racial and ethnic diversity among the elderly in the contemporary U.S. in terms of living arrangements, economic well-being, and reliance on formal and family-

based sources of support. Based on their assessments of the levels of need for long-term care among black, Hispanic, and non-Hispanic white older persons, they offer viable and attractive possible alternatives to institutionalization in the long-term care of the elderly.

Enlightened Aging Jones & Bartlett Learning

This book pioneers evidence-based research on healthy aging through the application of self determination theory (SDT). Its uniqueness is located in the fact that to date, no other work has applied SDT to the empirical study of aging populations. The authors focus on how SDT drives healthy, successful and active aging, and note that the motivation factors underpinning healthy aging are often neglected, or altogether absent, in the existing literature. This edited volume is particularly timely given the expanding aging crisis in many North American, European and Asian contexts. The collection of chapters meets this challenge head-on in comparing these contexts vis-a-vis a broad international scope, and subsequent discussions on important specialty issues in aging, such as hearing

and memory loss. The work offers global perspectives on aging, autonomy and associated life challenges, as well as factors relating to the sustainability of healthy aging in terms of physical and mental well-being. This book will be highly relevant to researchers in the SDT community, as well as specialists in aging and gerontology. It will also be of interest to lifespan psychologists and developmental psychologists.

Aging and Social Policy in the United States Routledge

Containing ideas and perspectives, this monograph examines the evolutionary and future considerations for diversity in aging. *Aging Invisibly* Routledge

Increased life expectancy and the ageing of the population have been the subject of attention in Western countries, and particularly in Europe, for some years now. The challenge of 'squaring the circle' between ends and means – as well as between personal aspirations and systemic constraints – in health and social care continues to be a major concern for

policymakers and all those involved in the delivery of services. This book, *Active Ageing and Healthy Living: A Human Centered Approach in Research and Innovation as Source of Quality of Life*, presents the results of a number of research projects from the Università Cattolica del Sacro Cuore - the largest private university in Italy and in Europe - with a strong commitment to the areas of medicine and health sciences, economics, business, international relations, political science, psychology and communications. Visions and research directions for the future are also presented and discussed. The introduction to the book addresses the challenges posed by an increasingly ageing population and the way in which multidisciplinary research can contribute to positive outcomes. The remainder of the book is divided into two sections. The first proposes promising research directions for future focus, and includes papers on demographic change; frailty in the elderly; the role of diet in healthy ageing; active ageing; and positive

technology. The second section deals with recent developments in research into active ageing and healthy living (AA&HL). It addresses numerous topics, including: mechanisms to shift the balance from unhealthy to healthy ageing; nutrition; the role of ICTs for older people; work, retirement and health; and empowering skills for AA&HL.

Women and Aging International Praeger
Silver Universe explores the topic of aging through an interdisciplinary lens while promoting their new idea of "active living" which incorporates exercise alongside a healthy diet and the implementation of disease prevention. The diverse group of contributors shed light on the connections between the psychological, emotional, and physical aspects of aging. From psychology (both clinical and social), through neurology, neurogenetics, gerontology, nutrition, economics, communication, law, tourism and theology, this book offers complimentary views on active living to ensure a high quality of life.
