2015** Mercer University

In the lifetimes of the  
authors, the world and  
especially the United

States have received  
three significant “wake-up  
calls” on energy  
production and  
consumption. The first of  
these occurred on  
October 15, 1973 when  
the Yom Kippur War  
began with an attack by  
Syria and Egypt on Israel.

The United States and  
many western countries  
supported Israel. Because  
of the western support of  
Israel, several Arab oil  
exporting nations  
imposed an oil embargo  
on the west. These  
nations withheld five  
million barrels of oil per

day. Other countries made up about one million barrels of oil per day but the net loss of four million barrels of oil production per day extended through March of 1974. This represented 7% of the free world's (i. e. , excluding the USSR) oil production. In 1972 the price of crude oil was about \$3. 00 per barrel and by the end of 1974 the price of oil had risen by a factor of 4 to over \$12. 00. This resulted in one of the worst recessions in the post World War II era. As a

result, there was a movement in the United States to become energy independent. At that time the United States imported about one third of its oil (about five million barrels per day). After the embargo was lifted, the world chose to ignore the “wake-up call” and went on with business as usual. **Proceedings of the International Congress on Advances in Nuclear Power Plants, ICAPP'06** Macmillan International Higher Education International Congress on Advanced Nuclear Power

This report suggests that  
Abruzzo should focus on  
endogenous resources to  
build its long-term  
development strategy  
and, at the same time, to  
increase the external  
openness of the regional  
system to attract more  
entrepreneurs, students,  
foreigners and external  
capital.

Information technology

(IT) has transformed  
human resource  
management across our  
society, and its influence  
on higher education has  
been profound.

Technology Everywhere  
addresses the dual role  
played by colleges and  
universities that must  
recruit, hire, and train  
knowledge worker  
professionals and educate  
IT learners to manage the  
ever-increasing flow of  
information both on  
campus and off. Each  
chapter in this much-  
needed volume addresses  
a critical phase of IT

human resource  
management, identifies  
key issues, and offers  
practical advice based on  
actual experiences that  
can help colleges and  
universities develop a  
plan of action to respond  
effectively to the IT  
workforce challenge.

How do dictatorships  
justify their rule and with  
what effects? This and  
similar questions guide  
the contributions to this  
edited volume. Despite  
the recent resurgence of  
political science

scholarship on autocratic resilience, many questions remain unanswered about the role of legitimation in contemporary non-democracies and its relationship with neighbouring concepts, like ideology, censorship, and consent. The overarching thesis of this book is that autocratic legitimation has causal influence on numerous outcomes of interest in authoritarian politics. These outcomes include regime resilience, challenger-state

interactions, the procedures and operations of elections, social service provision, and the texture of everyday life in autocracies. Researchers of autocratic politics will benefit from the rich contributions of this volume. The chapters in this book were originally published in a special issue of Contemporary Politics.

 From 1991 to 1998, Zell Miller served as the Governor of Georgia. With approval ratings reaching

record highs, Governor Miller's administration accomplished more than most Governors dream about. The end of an administration is a time to look back and sum up the accomplishments of an entire time in office. This book summarizes the accomplishments of Governor Zell Miller's Administration, and offers a reflective look at the overall impact of eight years of priorities.
