 No power, and batteries used up? This book and a Mark 3 sextant lets you carry on. It's a short book, mostly tables. You can read it in an hour or two, master the sights in less than that, and find your position the next time you see the sun at noon.
Some Heroes of Travel or, Chapters from the History of Geographical Discovery and Enterprise
 Serpent's Tail
 This book is a history of artificial intelligence, that audacious effort to duplicate in an artifact what we consider to be our most important property—our intelligence. It is an invitation for anybody with an interest in the future of the human race to participate in the inquiry.
The Pioneers Who Sought to See the Future Krishna Prakashan Media
 This book describes the inventions that make air travel possible, from balloons and airships to jet planes and space shuttles.
Rare Earth Frontiers S. Chand Publishing
 Sun Ra, Brian Eno, Lee Perry, Kate Bush, Kraftwerk, Aphex Twin, Ryuichi Sakamoto and Brian Wilson are interviewed in this extraordinary work of sonic history. It travels from the rainforests of Amazonas to virtual Las Vegas; from David Lynch's dream house high in the Hollywood Hills to the megalopolis of Tokyo. *Ocean of Sound* begins in 1889 at the Paris exposition when Debussy first heard Javanese music performed. An ethereal culture developed in response to the intangibility of 20th century communications. Author of *Rap Attack 3* and *Exotica*, David Toop has in *Ocean of Sound* written an exhilarating, path-breaking account of ambient sound.

 "Some Heroes of Travel or, Chapters from the History of Geographical Discovery and Enterprise" by W. H. Davenport Adams. Published by Good Press. Good Press publishes a wide range of titles that encompasses every genre. From well-known classics & literary fiction and non-fiction to forgotten—or yet undiscovered gems—of world literature, we issue the books that need to be read. Each Good Press edition has been meticulously edited and formatted to boost readability for all e-readers and devices. Our goal is to produce eBooks that are user-friendly and accessible to everyone in a high-quality digital format.
Inorganic Chemistry-II (For M.Sc. Course for Universities in Uttarakhand) Farrar, Straus and Giroux
 "The Short History of Science - or the long path to the union of metaphysics and empiricism" offers a guided tour of the path of development of natural sciences from antique philosophical concepts to the precise empirical theories in modern physics and cosmology, and their relation to a scientific picture of physical reality. Arising out of the author's deep-probing work on the Dynamic Universe theory, the book discusses the possibility of uniting present theories by restructuring the empirically driven solutions at a deeper metaphysical level. In addition to a study of the development path itself, the book presents a biographical gallery of more than a hundred scientists who contributed majorly to scientific development as well as a long list of references with links to original texts by the pioneers. The book is not only a source of information - but also challenges the reader to consider for himself this scientific evolution, the basis of prevailing theories and the picture of reality. "The Short History of Science - or the long path to the union of metaphysics and empiricism" provides a tool and a source of inspiration for both teachers and students of natural sciences as well as for individuals willing to deepen their understanding of the universe we live in. In the 3rd

complemented edition, Chapters 2-4 have been rewritten for easier reading.

With a New Introduction by Lester E. Denonn London : R. Bentley
 Philosopher, entrepreneur, and former National Geographic and New York Times correspondent Zoltan Istvan presents his visionary novel, *The Transhumanist Wager*, as a seminal statement of our times. Scorned by over 500 publishers and literary agents around the world, his philosophical thriller has been called "revolutionary" and "socially dangerous" by readers, scholars, and religious authorities. The novel debuts a challenging original philosophy, which rebuffs modern civilization by inviting the end of the human species—and declaring the onset of something greater. Set in the present day, the novel tells the story of transhumanist Jethro Knights and his unwavering quest for immortality via science and technology. Fighting against him are fanatical religious groups, economically depressed governments, and mystic Zoe Bach: a dazzling trauma surgeon and the love of his life, whose belief in spirituality and the afterlife is absolute. Exiled from America and reeling from personal tragedy, Knights forges a new nation of willing scientists on the world's largest seasteading project, Transhumania. When the world declares war against the floating city, demanding an end to its renegade and godless transhuman experiments and ambitions, Knights strikes back, leaving the planet forever changed.

Inventions and Inventors CRC Press

This edited volume charts the history of celestial navigation over the course of five centuries. Written by a group of historians and scientists, it analyzes how competing navigation systems, technologies, and institutions emerged and developed, with a focus on the major players in the US and the UK. The history covers the founding of the Royal Observatory; the first printing of a Nautical Almanac; the founding of the US and UK Nautical Almanac Offices; the creation of international standards for reference systems and astronomical constants; and the impact of 20th century technology on the field, among other topics. Additionally, the volume analyzes the present role and status of celestial navigation, particularly with respect to modern radio and satellite navigation systems. With its diverse authorship and nontechnical language, this book will appeal to any reader interested in the history of science, technology, astronomy, and navigation over the ages.

A Personal Inquiry into the History and Prospects of Artificial Intelligence MIT Press
 Weber County to 1847 -- The settlement of Weber County, 1847-1869 -- Railroads and growth, 1869-1889 -- Nineteenth century social and cultural history -- Riding the rails into the twentieth century, 1889-1920 -- Boom, bust, and war, 1920-1955 -- A time of change and diversity, 1955-1996 -- The social and cultural history of Weber County in the twentieth century.

Passages From the Life of A Philosopher SAGE

An updated reference for power and sail boaters surveys the latest developments in safety systems, marine electronics, radar, and communications, and federal laws and regulations, and includes information on tides, currents, weather, and navigation.

The Short History of Science Basic Books

Before Palm Pilots and iPods, PCs and laptops, the term "computer" referred to the people who did scientific calculations by hand. These workers were neither calculating geniuses nor idiot savants but knowledgeable people who, in other circumstances, might have become scientists in their own right. When *Computers Were Human* represents the first in-depth account of this little-known, 200-year epoch in the history of science and technology. Beginning with the story of his own grandmother, who was trained as a human computer, David Alan Grier provides a poignant introduction to the wider world of women and men who did the hard computational labor of science. His grandmother's casual remark, "I wish I'd used my calculus," hinted at a career deferred and an education forgotten, a secret life unappreciated; like many highly educated women of her generation, she studied to become a human computer because nothing else would offer her a place in the scientific world. The book begins with the return of Halley's comet in 1758 and the effort of three French astronomers to compute its orbit. It ends four cycles later, with a UNIVAC electronic

computer projecting the 1986 orbit. In between, Grier tells us about the surveyors of the French Revolution, describes the calculating machines of Charles Babbage, and guides the reader through the Great Depression to marvel at the giant computing room of the Works Progress Administration. *When Computers Were Human* is the sad but lyrical story of workers who gladly did the hard labor of research calculation in the hope that they might be part of the scientific community. In the end, they were rewarded by a new electronic machine that took the place and the name of those who were, once, the computers.

The Transhumanist Wager Good Press

An extensive working vocabulary is a prerequisite for test-taking success on the Graduate Record Exam. This book presents 800 graduate-level words with definitions that frequently appear on the exam. Words are used in different contexts to familiarize test takers with their many variations. The book's additional features include a pre-test that helps to diagnose weaknesses, a lengthy word list with extensive practice exercises, and a chapter that discusses and analyzes essential word roots. The book concludes with a post-test to assess progress. Answers are provided for all exercises and for all questions in the pre- and post-test.

Providing a clear and concise overview of the conduct of applied research studies in accounting, Malcolm Smith presents the principal building blocks of how to implement research in accounting and related fields.

Machines Who Think S. Chand Publishing

This book, which originally appeared as a special issue of TDR/The Drama Review, explores the myriad aesthetic, cultural, and experimental possibilities of radiophony and sound art. Art making

and criticism have focused mainly on the visual media. This book, which originally appeared as a special issue of TDR/The Drama Review, explores the myriad aesthetic, cultural, and experimental possibilities of radiophony and sound art. Taking the approach that there is no single entity that constitutes "radio," but rather a multitude of radios, the essays explore various aspects of its apparatus, practice, forms, and utopias. The approaches include historical, political, popular cultural, archeological, semiotic, and feminist. Topics include the formal properties of radiophony, the disembodiment of the radiophonic voice, aesthetic implications of psychopathology, gender differences in broadcast musical voices and in narrative radio, erotic fantasy, and radio as an electronic memento mori. The book includes a new piece by Allen Weiss on the origins of sound recording. Contributors John Corbett, Tony Dove, René Farabet, Richard Foreman, Rev. Dwight Frizzell, Mary Louise Hill, G. X. Jupiter-Larsen, Douglas Kahn, Terri Kapsalis, Alexandra L. M. Keller, Lou Mallozzi, Jay Mandeville, Christof Migone, Joe Milutis, Kaye Mortley, Mark S. Roberts, Susan Stone, Allen S. Weiss, Gregory Whitehead, David Williams, Ellen Zweig

From Terrestrial Subsoils to Lunar Landscapes New Age International

The first in-depth reference in the field that combines scientific knowledge with philosophical inquiry, *The Philosophy of Science: An Encyclopedia* is a two-volume set that brings together an international team of leading scholars to provide over 130 entries on the essential concepts in the philosophy of science. The areas covered include: biology chemistry epistemology and metaphysics physics psychology and mind the social sciences key figures in the combined studies of science and philosophy. The essays represent the most up-to-date philosophical thinking on timeless scientific topics such as: determinism, explanation, laws of nature, perception, individuality, time, and economics as well as timely topics like adaptation, conservation biology, quantum logic, consciousness, evolutionary psychology, and game theory.

- Or the Long Path to the Union of Metaphysics and Empiricism Starpath Publications

The Book Has Been Written Keeping In Mind The Experiments Carried Out At B.Sc. Level At Indian Universities. It Is Written In An Easy To Understand And Systematic Format. Detailed Description Of Different Apparatus, Related Errors And Their Handling Is An Added Feature Of The Book. Tables Of Physical Constants Are Also Presented. More Than One Experimental Method For Determining A Physical Parameter Is Given So That Student Can Appreciate The Intricacies.
