This book brings together recent research on interpersonal relationships in education from a variety of perspectives including research from Europe, North America and Australia. The work clearly demonstrates that positive teacher-student relationships can contribute to student learning in classrooms of various types. Productive learning environments are characterized by supportive and warm interactions throughout the class: teacher-student and student-student. Similarly, at the school level, teacher learning thrives when there are positive and mentoring interrelationships among professional colleagues. Work on

this book began with a series of formative presentations at the second International Conference on Interpersonal Relationships in Education (ICIRE 2012) held in Vancouver, Canada, an event that included among others, keynote addresses by David Berliner, Andrew Martin and Mieke Brekelmans. Further collaboration and peer review by the editorial team resulted in the collection of original research that this book comprises. The volume (while eclectic) demonstrates how constructive learning environment relationships can be developed and sustained in a variety of settings. Chapter contributions come from a range of fields including educational

and social psychology, teacher and school effectiveness research, communication and language studies, and a variety of related fields. Together, they cover the important influence of the relationships of teachers with individual students, relationships among peers, and the relationships between teachers and their professional colleagues.

"It is very exciting to see all of these studies compiled in one book. It can be read sequentially or just for certain transitions. It also can be used as a template for compilation of other concepts central to

nursing and can serve as a resource for further studies in transitions. It is an excellent addition to the nursing literature."

"Understanding and recognizing transitions are at the heart of health care reform and this current edition, with its numerous clinical examples and descriptions of nursing interventions, provides important lessons that can and should be incorporated into health policy. It is a brilliant book and an important contribution to nursing theory."

Kathleen Dracup, RN,

Professor, School of
Nursing University of
California San
Francisco Afaf Meleis,
the dean of the
University of

Pennsylvania School of Nursing, presents for the first time in a single volume her original "transitions theory" that integrates middle-range theory to assist nurses in facilitating positive transitions for patients, families, and communities. Nurses are consistently relied on to coach and support patients going through major life transitions, such as illness, recovery, pregnancy, old age, and many more. A collection of over 50 articles published from 1975 through 2007 and five newly commissioned articles, Transitions Theory covers developmental, situational, health and illness, organizational, and therapeutic transitions. Each section includes an

introduction written by Dr. Meleis in which she offers her historical and practical perspective on transitions. Many of the articles consider the transitional experiences of ethnically diverse patients, women, the elderly, and other minority populations. Key Topics Discussed: Situational transitions, including discharge and relocation transitions (hospital to home, stroke recovery) and immigration transitions (psychological adaptation and impact of migration on family health) Educational transitions, including professional transitions (from RN to BSN and student to professional) Health and illness transitions, including self-care post

heart failure, living with chronic illness, living with early dementia, and accepting palliative care Organization transitions, including role transitions from acute care to collaborative practice, and hospital to community practice Nursing therapeutics models of transition, including role supplementation models and debriefing models

The Australian Country Girl: History, Image, Experience offers a

detailed analysis of the experience and the image of Australian country girlhood. In Australia, 'country girl' names a field of experiences and life-stories by girls and women who have grown up outside of the demographically dominant urban centres. But it also names a set of ideas about Australia that is surprisingly consistent across the long twentieth century despite also working as an index of changing times. For a long period in Australian history, well before Federation and long after it, public and popular culture openly equated 'Australian character' with rural life. This image of Australian-ness sometimes went by the name of the 'bush

man', now a staple of Australian history. This has been counterbalanced post World War II and increased immigration, by an image of sophisticated Australian modernity located in multicultural cities. These images of Australia balance rather than contradict one another in many ways and the more cosmopolitan image of Australia is often in dialogue with that preceding image of 'the bush'. This book does not offer a corrective to the story of Australian national identity but rather a fresh perspective on this history and a new focus on the ever-changing experience of Australian rural life. It argues that the country girl has not only been a long-standing

counterpart to the Australian bush man she has, more importantly, figured as a point of dialogue between the country and the city for popular culture and for public sphere narratives about Australian society and identity.

Celebrate and Rediscover the Restorative Power of Childhood It's easy to sometimes feel that our lives have become dull and stagnant. Now, in *Forever Young*, psychologist William Crain invites us to consider how six great individuals were able to call upon the powers of childhood to restore their spirits and nurture their creativity. Explore the remarkable biographies of Henry

David Thoreau, Albert Einstein, Charlotte Brontë, Howard Thurman, Jane Goodall and Rachel Carson, and discover how each one revived childhood qualities such as a sense of wonder, playfulness and a feeling for nature, and in the process overcame personal roadblocks and expanded our understanding of the world. Following these inspiring stories, Crain also offers practical suggestions for how we too can reclaim the spirit and strengths of childhood to help us uncover meaning and purpose in our own lives.

"Demographic and technological trends have yielded new forms of work that are

increasingly more precarious, globalized, and brand centered. Some of these shifts have led to a marked decrease in the visibility of work or workers. This edited collection examines situations in which technology and employment practices hide labor within the formal paid labor market, with implications for workplace activism, social policy, and law. In some cases, technological platforms, space, and temporality hide workers and sometimes obscure their tasks as well. In other situations, workers may be highly visible--indeed, the employer may rely upon the workers' aesthetics to market the branded product--

but their aesthetic labor is not seen as work. In still other cases, the work occurs within a social interaction and appears as leisure--a voluntary or chosen activity--rather than as work. Alternatively, the workers themselves may be conceptualized as consumers rather than as workers. Crossing the occupational hierarchy and spectrum from high- to low-waged work, from professional to manual labor, and from production to service labor, the authors argue for a broader understanding of labor in the contemporary era. This book adopts an interdisciplinary approach that integrates perspectives from law, sociology, and industrial/labor

relations"--Provided by publisher.

The greatest haunted house story ever written, the inspiration for a 10-part Netflix series directed by Mike Flanagan and starring Michiel Huisman, Carla Gugino, and Timothy Hutton First published in 1959, Shirley Jackson's *The Haunting of Hill House* has been hailed as a perfect work of unnerving terror. acquainted with poltergeists; and Luke, the future heir of Hill House. At first, their stay seems destined to be merely a spooky encounter with inexplicable phenomena. But Hill House is gathering its powers—and soon it will choose one of them to make its own.  Is children's language acquisition based on innate linguistic structures or built from cognitive and communicative skills? This book summarises the major theoretical debates in all of the core domains of child language acquisition research (phonology, word-learning, inflectional morphology, syntax and binding) and includes a complete introduction to the two major contrasting theoretical approaches:

generativist and constructivist. For each debate, the predictions of the competing accounts are closely and even-handedly evaluated against the empirical data. The result is an evidence-based review of the central issues in language acquisition research that will constitute a valuable resource for students, teachers, course-builders and researchers alike.

Human Development

Psychology Press
This book contains the most sustained and serious attack on mainstream, neoclassical economics in more than forty years. Nelson and Winter focus their critique on the basic question of how firms and industries change overtime. They

marshal significant objections to the fundamental neoclassical assumptions of profit maximization and market equilibrium, which they find ineffective in the analysis of technological innovation and the dynamics of competition among firms. To replace these assumptions, they borrow from biology the concept of natural selection to construct a precise and detailed evolutionary theory of business behavior. They grant that firms are motivated by profit and engage in search for ways of improving profits, but they do not consider them to be profit maximizing. Likewise, they emphasize the tendency for the more

profitable firms to drive the less profitable ones out of business, but they do not focus their analysis on hypothetical states of industry equilibrium. The results of their new paradigm and analytical framework are impressive. Not only have they been able to develop more coherent and powerful models of competitive firm dynamics under conditions of growth and technological change, but their approach is compatible with findings in psychology and other social sciences. Finally, their work has important implications for welfare economics and for government policy toward industry.

Understanding Human Development

Prentice Hall

In 2008, Bill Crain, a professor of psychology at The City College of New York, and his wife Ellen, a pediatrician, opened Safe Haven Farm Sanctuary in Poughquag, New York. The sanctuary provides a permanent home to over 70 animals rescued from slaughter and abusive situations, including goats, sheep, chickens, turkeys, ducks, partridges, and a mini-horse. It also has afforded Bill a tremendous opportunity to observe animals in all manner of emotional states and how their behavior casts light on the emotions of human children. In The

Emotional Lives of Animals and Children, Crain honors the work of John Bowlby a psychoanalyst who began his major writings in the 1950s. Bowlby drew on biologists' observations of animals to provide a compelling account of children's attachment to their caretakers. "Today, the study of attachment is extremely popular," Crain writes, but "one would hardly know that the initial inspiration came from observations of non-human animals. Moreover, there has been little effort to extend Bowlby's work – to see how the study of animals illuminates other aspects of child development." Crain suggests that the reluctance to follow Bowlby's lead reflects

the Western worldview that considers humans as different from and superior to other species. To think about children in the same category as animals seems to demean children. But Crain discovered that the farm animals' emotional behaviors can help us understand those of human children. The Emotional Lives of Animals and Children is divided into two parts. Part one discusses six emotional behaviors that are shared by animals and children: fear, play, freedom, care, spirituality, and resilience. Part two addresses the broader social theme of our Western culture's disparagement of animals. Initially, children do not set themselves apart from

nature, but experience it with an instinctive empathy. However, they are eventually taught by our society to detach themselves and to devalue animals. Crain writes, "As people attempt to move beyond society's dominant views of animals, they can also draw on a neglected idea that goes back to ancient times. This is the view that there is a special wisdom in the child's ways of knowing. This view is found in the ancient Chinese Taoist statement, 'wise souls are children.'" About Safe Haven Farm Sanctuary Safe Haven Farm Sanctuary is located in Poughquag, New York, about an hour and a half outside of New York City. Its focus is on the rescue of abused and

neglected farm animals. In doing so, it hopes to raise awareness of the plight of animals raised for food and the benefits of a vegan diet for animals, human health, and the environment. Wherever possible, the sanctuary tries to implement environmentally sound practices such as solar heating and the use of reclaimed wood.
