Improvisation and Systems Change Barefoot Books
 "This brand new title in the ABC series provides a comprehensive overview of pre-hospital medicine, including transport, patient assessment, emergency care systems, and pre-hospital interventions. With pre-hospital care being the start of the "trauma chain", the treatment patients receive on-scene as well as en-route can be life-saving, and this new title is invaluable for all staff involved in emergency and pre-hospital medicine"--Provided by publisher.

A Self-care Handbook Springer

This book examines the diagnostic overlap and frequent confusion between the newly named DSM-5 diagnostic categories of neurodevelopmental disorders (NDDs), which include autism spectrum disorder (ASD), and trauma and stressor related disorders (TSRDs). These conditions are similar in that a) children with developmental disorders are particularly vulnerable to traumatic events and b) all have pervasive effects on the brain and development. Chapters provide a wealth of effective clinical, family, and school-based interventions, developed from established studies and important new findings. In addition, chapters use illustrative case studies to survey assessment challenges in today's healthcare climate and consider alternative routes for improving correct diagnoses, identifying appropriate interventions, and referring proper targeted, evidence-based treatment and services. The book concludes with the editors' recommendations for needs-based service access, including a more widespread use and acceptance of the Research Domain Criteria (RDoC) and the International Classification of Functioning, Disability, and Health (ICF) framework. Topics featured in this book include: The neurobiological contributors to posttraumatic stress disorder (PTSD). Fetal alcohol spectrum disorders (FASDs) and its diagnosis in children with a history of trauma. Interventions for trauma and stressor-related disorders in preschool-aged children. Reactive attachment disorder (RAD) and autism spectrum disorder (ASD) diagnosis and care in a cultural context. Special population consideration in ASD identification and treatment. Challenges associated with the transition to adulthood. Trauma and neurodevelopmental disorders from a public health perspective. Trauma, Autism, and Neurodevelopmental Disorders is a must-have resource for researchers, clinicians and related professionals, and graduate students in developmental psychology, child and adolescent psychiatry, public health, social work, pediatrics, and special education.

FAQs on Autism, Asperger Syndrome, and Atypical Autism Answered by International Experts Routledge

"With contributions from leading investigators, the book explores the effects on attachment of a wide range of factors in middle childhood, including children's broadening network of social relationships. Compelling data are presented on whether the quality of attachment in middle childhood can be predicted by assessments earlier in life, and what may explain changes over time."--BOOK JACKET.

An Introduction to Autism for Adoptive and Foster Families Jessica Kingsley Publishers

Since its first identification, Autism Spectrum Disorder (ASD) has presented myriad challenges of diagnosis and classification. Our understanding has evolved from a cluster of diagnostic categories (Asperger's, Autism, and Pervasive Development Disorder) to the current continuum of Autism Spectrum Disorder. Meanwhile, we have progressed from debating the validity of the diagnosis, to considering it a modern epidemic. This evolution has drawn attention across a variety of fields, including the neurosciences, education, forensics, and behavioral health. While new research accumulates, there remains a lack of conceptual and practical clarity about what ASD is, how specific diagnoses might be delineated, and what we can do to understand and manage the complexity of individuals on the Spectrum. In understanding ASD, one size does not fit all—families, schools, and clinicians all need a multi-faceted engagement with the specifics they encounter. This text opens a critical dialogue through which students, researchers, and clinicians can challenge their ideas about what it means to work with the unique presentations of individuals on the Spectrum. It provides education, clinical expertise, and personalization to the lives influenced by the ever-changing dynamics of Autism Spectrum Disorder.

New Zealand Autism Spectrum Disorder Jessica Kingsley Publishers

This straightforward guide offers a complete overview of Pathological Demand Avoidance Syndrome (PDA) and gives

practical advice for overcoming the difficulties it poses in a wide range of contexts from diagnosis through to adulthood. Starting with an exploration into the background of PDA that answers many of the immediate questions triggered when a child is first diagnosed, the book goes on to look at the impact of the condition on different areas of the child's life and what can be done to help. The authors present useful information on early intervention options and workable strategies for managing PDA positively on a day-to-day basis. They also examine ways to minimize common difficulties that may be encountered at home and school, making life easier for the child, family and peers. The final chapters tackle new problems that can arise when the teenage years hit and how to assist a successful transition from adolescence to adulthood. Illustrative case examples are included throughout, and the book concludes with a list of valuable resources for further information and advice. Full of helpful guidance and support, this user-friendly introductory handbook is essential reading for anyone caring for, or working with, children with PDA.

Insights from Experience, Practice and Research Jessica Kingsley Publishers

Attachment is a word used to describe a simple idea - the relationship with someone you love or whose opinions are important to you - so why is so much of the language relating to attachment so obscure, and why is it so challenging to help children who lack healthy attachment bonds? Attachment in Common Sense and Doodles aims to bring some clarity and simplicity to the subject. Providing grounded information and advice accompanied by a series of simple 'doodles' throughout, it explains attachment in language that is easy to understand and describes how to apply this information in everyday life. It describes how the attachment patterns in children who are adopted or fostered differ, summarises the latest research in the field and provides advice on how to repair attachment difficulties and to build secure, loving relationships. Covering all of the 'need to know' issues including how to spot attachment difficulties, build resilience and empathy and responding to problematic behaviour, this book will be an invaluable resource for families and professionals caring for children who are fostered, adopted or who have experienced early trauma.

Trauma, Autism, and Neurodevelopmental Disorders MIT Press

This volume presents a comprehensive overview of childhood trauma, considering the psychopathological definition and its neurobiological implications as well as its impact on different psychiatric disorders. The focus on childhood trauma rather than that occurring in adulthood is important due to its general "neuro-psycho-socio" and its specific biological implications, since trauma during childhood impacts directly on neurodevelopment. It has

been suggested that early life stress increases vulnerability to psychiatric disorders; however, the exact mechanisms of this association are not yet completely understood. Although childhood trauma could be considered too unspecific to be an important risk factor for individual psychiatric disorders since it seems to occur across the board, it impacts differently on different psychiatric disorders, and it can modulate their clinical expression. Therefore, the assessment of early trauma needs to be included in the clinical evaluation of patients with psychiatric disorders. The volume will be an invaluable tool for psychiatrists, helping them to select suitable pharmacological, psychotherapeutic and rehabilitative treatments.

Rewriting Family Scripts Jessica Kingsley Publishers

Understanding Pathological Demand Avoidance Syndrome in Children Routledge

"To think of PDA as merely involving demand avoidance is to me akin to thinking of tigers as merely having stripes." This book is a unique window into adult Pathological Demand Avoidance (PDA), exploring the diversity of distinct PDA traits through the voices of over 70 people living with and affected by the condition. Sally Cat, an adult with PDA, has successfully captured the essence of a popular online support group in book form, making the valuable insights available to a wider audience, and creating a much-needed resource for individuals and professionals. Candid discussions cover issues ranging from overload and meltdowns, to work, relationships and parenting. This is a fascinating and sometimes very moving read.

Attachment in Common Sense and Doodles Routledge

Autism Spectrum Conditions (ASC), which include autism, Asperger syndrome, and atypical autism, are puzzling, controversial, and a challenge – and the subject of both increasing interest and a multitude of myths. While many questions about ASC remain unanswered to date, our knowledge of the roots, characteristics, outcome, and effective intervention options has improved hugely in recent years. In this unique book, leading clinical and research authorities help explore myths and answer frequently asked questions on ASC: What are ASC? What are their causes? How prevalent are they? How are ASC diagnosed and by whom? What are the first signs? How should people with ASC be educated and treated? How do people with ASC think? What can parents, teachers, and experts do? What can be done for adults with ASC? Where can information and support be found? These and other areas are covered by this clearly written book to provide concise, scientifically sound, state-of-the-art, and practical information about autism spectrum conditions for all who work with ASC clients, as well as for families and friends.

Diagnosis and Assessment in Autism John Wiley & Sons

Written for busy foster carers and adoptive parents, this book provides a concise introduction to Autism Spectrum Disorder (ASD), and how to support a child with a diagnosis. It emphasises the common strengths children with ASD have, as well as offering strategies for any behavioural issues that are likely to arise, highlighting how these can be exacerbated by the care system and adoption process. The first part of the book looks at the different aspects of autism and the challenges it can pose for children and parents, providing strategies for managing difficulties at home and at school, using social stories, and reducing sensory input in a child's environment. The second part looks at issues that arise for fostered or adopted children, including placement transitions, contact, and explaining the past. It concludes with helping parents to think about self-care.

PDA by PDAers John Wiley & Sons

Assessment, intervention and living with children who are looked

after or adopted all require an understanding of psychology and its application. This innovative collection makes thinking psychologically about looked after and adopted children accessible and, in doing so, provides an insight into the world of these children. Informed by research, practice and psychological theory, this volume provides an overview of the area and considers the context for helping children change and develop. It goes on to describe in detail the techniques and approaches used by clinicians, and explains how interventions can be developed and adapted for children and young people living in residential, foster and adoptive care. Careful consideration is also given to carers and families living with these children. With its multi-disciplinary approach, *Thinking Psychologically About Children Who Are Looked After and Adopted* will appeal to all professionals involved in the care and education of placed children. It will also be of interest to policy makers and lecturers and students of social work.

Attachment and the Language of Disease Guilford Press

This book utilises conversation analysis (CA) and discursive psychology (DP) methodologies to examine the internal workings of multi-disciplinary teams which are concerned with the care, treatment and diagnosis of clients with complex mental health needs. Bringing together practitioners, service users and researchers who were part of the MDTInAction research project, the authors offer a unique and systematic investigation into the ways members of multidisciplinary teams collaboratively manage their shared goals. A particular focus is on the language used in team meetings, and how examination of meeting talk can help us better understand the practice of inter-professional working. The authors also describe how a range of institutional barriers and concerns need to be tackled in implementing the study in a healthcare setting. Over the course of this book they reveal a number of methodological developments which will be of interest to researchers and academics in CA/DP, and in healthcare communication generally. This book highlights how CA and DP can be used to identify and improve communicative practices in a healthcare setting; and also serves as an example of how to conduct an applied CA/DP project in a way that achieves impact.

New Thinking About Children Springer

This book presents clinical assessment and management solutions for those people who are exposed to Alcohol in Pregnancy. Over the last few decades we have begun to understand the enduring effects of prenatal alcohol exposure on the developing fetus. The consequence of prenatal alcohol exposure - Fetal Alcohol Spectrum Disorders is a lifelong disorder and affects children and adults. It is a condition which is significantly under-recognised for many reasons. Assessment and diagnosis requires the input of multiple different professionals, and referral pathways are often poorly developed or non-existent. Information to support and guide these professionals in practical ways, what to do and how to help, remains limited. This book seeks to fill some of that gap by offering professionals, clear and useable research-based information and guidance that will help in their practice whilst also being a useful resource for anyone new to this increasingly recognised area of work. The book is divided into four broad areas bringing together chapters authored by experts in their field including those with lived experiences. Part one focuses on presenting an overview of the condition, and approaching women about their alcohol use and risk followed by part two focusing more around diagnostic issues. Part three follows with management advice, and part four revolves around policy and health prevention in general. Each chapter is designed to offer insight but also practical tips and support in an accessible manner. The book offers an essential guide for a broad range of health and social care professionals working with this condition. **How to Thrive in Professional Practice** Cambridge University Press Jane Alison Sherwin's honest and uplifting account provides insight into the challenges of bringing up a child with Pathological Demand Avoidance (PDA). After years of misdiagnosis, Jane's daughter, Mollie, was diagnosed with PDA at the age of seven, and we follow her experiences pre and post diagnosis to age 10 as she attends school, interacts with the outside world and approaches adolescence. Throughout, Jane provides commentary on her daughter's behaviour and the impact it has on her family, explaining the 'why' of PDA traits, including the need for control, meltdowns, obsessive behaviour and sensory issues. She reveals the strategies that have worked for Mollie and provides essential advice and information on obtaining a diagnosis and raising awareness of PDA. The book also includes an interview with Mollie. Full of advice and support, and with a focus on understanding the child and how he or she sees the world, this book will be of immeasurable value to the parents and families of children with PDA as well as the professionals working with them, particularly teachers and teaching assistants, SEN co-ordinators, psychologists, outreach workers and social workers.

Division TEACCH, located in the School of Medicine at the University of North Carolina at Chapel Hill, was one of the first programs in the country to understand that autism was an organic rather than a biologic condition. We were also one of the earliest programs to recognize the enormous variability in characteristics and behaviors of children described as autistic. For these reasons, the processes of diagnosis and assessment have always been important and central to our program. We are therefore extremely pleased to have a volume representing the most current thinking of the field's leaders in these important areas. As with the preceding books in our series, *Current Issues in Autism*, this volume is based on one of the annual TEACCH conferences held in Chapel Hill each May. The books are not simply published proceedings of the conference papers, however. Rather, conference participants are asked to develop a full chapter around their presentations. Other international experts whose work is beyond the scope of the conference, but related to the major theme, are asked to contribute chapters as well. These volumes are designed to provide the most current knowledge in research and professional practice available on the most important issues defining and clarifying autism.
