Principles, Problems, and Policies IAP

The author has virtually incomparable experience in both providing trade policy advice to more than 25 countries on behalf of the World Bank and also publishing quality journal articles in most of those cases. In this volume, he focuses on his work on: (i) trade policies for countries making the transition from planned to market economies; (ii) his trade policy guideline papers for the World Bank on trade policies for poverty alleviation, uniform tariff policy, adjustment costs of trade liberalization, exchange rate overvaluation, globalization and technology transfer and rules of thumb on regional trade policies; (iii) multilateral, dynamic and environmental issues in trade policy using computable general equilibrium models; (iv) trade policy of the United States in the auto and steel industries; and (v) mathematical methods for modeling. The papers show an unusual combination of policy relevance, advice and impact, with rigor and international trade theory insights. The papers in this volume have appeared in many of the economics profession's more prestigious journals, including *Econometrica*, *Review of Economic Studies*, *Quarterly Journal of Economics*, *Economic Journal*, the *Journal of International Economics*, *International Economic Review*, *European Economic Review*, *Canadian Journal of Economics*, *Economic Inquiry*, the *Journal of Comparative Economic*, *Review of International Economics*, *World Economy*, the *Southern Economic Journal*, the *World Bank Economic Review*, the *Japanese Economic Review* and the *Latin American Journal of Economics*. In this book, the author elaborates on the articles by discussing some of the policy contexts for the requests for the work from developing and transition countries to the World Bank, the key trade theory or policy insights, policy recommendations and conclusions and the policy impacts.

Economic growth, reflected in increases in national output per capita, makes possible an improved material standard of living and the alleviation of poverty. Sustainable development, popularly and concisely defined as 'meeting the needs of the present generations without compromising the ability of future generations to meet their needs,' directly addresses the utilization of natural resources, the state of the environment, and intergenerational equity. Now in its second edition, Economic Growth and Sustainable Development features expanded discussion of income distribution, social capital and the insights of behavioural economics for climate change mitigation. Boxed case studies have been added which explore the impact of economic growth on people and countries in both the developed and developing world. This text addresses the following fundamental questions: What causes economic growth? Why do some countries grow faster than others? What accounts for the extraordinary growth in the world's population over the past two centuries? What are the current trends in population and will these trends continue? How do we measure sustainable development and is sustainable development compatible with economic growth? Why is climate change the greatest market failure of all time? What can be done to mitigate climate change and global

warming? With a blend of formal models, empirical evidence, history and policy, this text provides a coherent and comprehensive treatment of economic growth and sustainable development. It is suitable for those who study development economics, sustainable development and ecological economics.

This book investigates the politics of transatlantic trade, specifically the Transatlantic Trade and

Investment Partnership negotiations. Using a novel approach, the authors analyze the rhetorical choices made by opponents and supporters of an agreement, and the logical behind their arguments. Opponents used emotive frames and strategically chosen issues to increase public opposition to the negotiations; supporters countered, but also accommodated, parts of opponents' rhetoric in hopes of quelling discontent. The study also highlights the resulting changes to EU trade policy, thus contributing to the literatures on trade policy, politicization, and rhetorical analysis.
