Beholden to accepted assumptions about people and organizations, too many enterprises waste human potential. Robert Quinn shows how to defy convention and create organizations where people feel fully engaged and continually rewarded, where both individually and collectively they flourish and exceed expectations. The problem is that leaders are following a negative and constraining “mental map” that insists organizations must be rigid, top-down hierarchies and that the people in them are driven mainly by self-interest and fear. But leaders can adopt a different mental map, one where organizations are networks of fluid, evolving relationships and where people are motivated by a desire to grow, learn, and serve a larger goal. Using dozens of memorable stories, Quinn describes specific actions leaders can take to facilitate the emergence of this organizational culture—helping people gain a sense of purpose, engage in authentic conversations, see new possibilities, and sacrifice for the common good. The book includes the Positive Organization Generator, a tool that provides 100 real-life practices from positive organizations and helps you reinvent them to fit your specific needs. With the POG you can identify and implement the practices that will have the greatest impact on your organization. At its heart, the book helps leaders to see new possibilities that lie within the acknowledged realities of organizational life. It provides five keys for learning to be “bilingual”—speaking the conventional language of business as well as the language of the positive organization. When leaders can do this, they are able to make real and lasting change.

BLU Acceleration is a new technology that has been developed by IBM® and integrated directly into the IBM DB2® engine. BLU Acceleration is a new storage engine along with integrated run time (directly into the core DB2 engine) to support the storage and analysis of column-organized tables. The BLU Acceleration processing is parallel to the regular, row-based table processing found in the DB2 engine. This is not a bolt-on technology nor is it a separate analytic engine that sits outside of DB2. Much like when IBM added XML data as a first class object within the database along with all the storage and processing enhancements that came with XML, now IBM has added column-organized tables directly into the storage and processing engine of DB2. This IBM Redbooks® publication shows examples on an IBM Power Systems™ entry server as a starter configuration for small organizations, and build larger configurations with IBM Power Systems larger servers. This publication takes you through how to build a BLU Acceleration solution on IBM POWER® having SAP Landscape integrated to it. This publication implements SAP NetWeaver Business Warehouse Systems as part of the scenario

using another DB2 Feature called Near-Line Storage (NLS), on IBM POWER virtualization features to develop and document best recommendation scenarios. This publication is targeted towards technical professionals (DBAs, data architects, consultants, technical support staff, and IT specialists) responsible for delivering cost-effective data management solutions to provide the best system configuration for their clients' data analytics on Power Systems.
