This work is an intensive study of certain facets of social and intellectual life in Bengal between 1872 and 1905, particularly Hindu revivalism. The period under discussion represents significant progress in the area of social and religious reform as well as a period which witnessed hostile attitudes towards such reforms. This is probably the first major work concerning the controversy that surrounded the Brahmo Marriage Bill of 1868-72 and the Consent Bill of 1890-92. The major source material for this book comprises contemporary Bengali literature, including essays, newspaper articles and correspondence, novels, short stories, drama, and poetry. Though this study purports to be a history of intellectual life in Bengal and the broader intellectual trends and movements, it is largely an examination of certain developments centred in or around Calcutta.

Multimedia services involve processing, transmission and retrieval of multiple forms of information. Multimedia services have gained momentum in the past few years due to the easy availability of computing power and storage media. Society is demanding human-like intelligent behaviour, such as adaptation and generalization, from machines every day. With this view in mind, researchers are working on fusing intelligent paradigms such as artificial neural networks, swarm intelligence, artificial immune systems, evolutionary computing and multiagents with multimedia services. Artificial neural networks use neurons, interconnected using various schemes, for fusing learning in multimedia-based systems. Evolutionary computing techniques are used in tasks such as optimization. Typical multiagent systems are based on Belief-Desire-Intention model and act on behalf of the users. Typical examples of intelligent multimedia services include digital libraries, e-learning and teaching, e-government, e-commerce, e-entertainment, e-health and e-legal services. This book includes 15 chapters on advanced tools and methodologies pertaining to the multimedia services. The authors and reviewers have contributed immensely to this research-oriented book. We believe that this research volume will be valuable to professors, researchers and students of all disciplines, such as computer science, engineering and management. We express our sincere thanks to Springer-Verlag for their wonderful editorial support.

Provides a one-stop resource for engineers learning biostatistics using MATLAB® and WinBUGS. Through its scope and depth of coverage, this book addresses the needs of the vibrant and rapidly growing bio-oriented engineering fields while implementing software packages that are familiar to engineers. The book is heavily oriented to computation and hands-on approaches so readers understand each step of the programming. Another dimension of this book is in parallel coverage of both Bayesian and frequentist approaches to statistical inference. It avoids taking sides on the classical vs. Bayesian paradigms, and many examples in this book are solved using both methods. The results are then compared and commented upon. Readers have the choice of MATLAB® for classical data analysis and WinBUGS/OpenBUGS for Bayesian data analysis. Every chapter starts with a box highlighting what is covered in that chapter and ends with

exercises, a list of software scripts, datasets, and references. Engineering Biostatistics: An Introduction using MATLAB® and WinBUGS also includes: parallel coverage of classical and Bayesian approaches, where appropriate substantial coverage of Bayesian approaches to statistical inference material that has been classroom-tested in an introductory statistics course in bioengineering over several years exercises at the end of each chapter and an accompanying website with full solutions and hints to some exercises, as well as additional materials and examples. Engineering Biostatistics: An Introduction using MATLAB® and WinBUGS can serve as a textbook for introductory-to-intermediate applied statistics courses, as well as a useful reference for engineers interested in biostatistical approaches.

Indian religions, especially Hinduism, Jainism, Sikhism and Buddhism, the saintly man is revered as "truth-exemplary" for his knowledge of "self, truth and reality". In Sikhism it is used to describe human beings who have attained spiritual enlightenment and divine wisdom and power by uniting with God. A saint has an important place in the life of a devotee. The importance of a saint is also mentioned in Hindu scriptures. According to Hindu scriptures, by taking refuge in a true saint and performing devotional service according to the scriptures, the worshiper becomes free from the diseases of birth and death. The identity of a true saint has also been told in the holy scriptures of Hinduism that a true saint will have complete knowledge of all the holy scriptures and will take diksha three times in the name of three types of mantras. A saint, a theologian or a bhagat is any human being who has attained God and is in spiritual contact with God. Sikhs believe that the divine energy of God can be experienced by man on earth. This is achieved through constant chanting of the Lord's name (Naam Japo / Naam Simran) and spiritual introspection. Sikhs generally use reality as the name of God which cannot be merely mouthed but must be lived in truth. Saints can be of any religion. Individuals like Kabir, Ravidas, Namdev, Farid, Bhikkan and others are known as saints or bhagats, irrespective of their belonging to Islam or Hinduism. The divine knowledge is universal, and after attaining knowledge through Naam Simran their knowledge is compiled and included in the holy book of Sikhism, Sri Guru Granth Sahib. Saints are holy persons of the highest order, they are among the

ideal human beings. Thus, Sikhs are encouraged to seek the company and pious company of saints (saadh- sangat), learn from them, and attain "sainthood" through intense reading and meditation on the Sikh scriptures (gurbani) and Naam Simran. Do it. The virtuous life associated with a saint or Brahmgyani (one who has complete knowledge of God) is defined in Sikh Gurbani, specifically in the Sukhmani Sahib passage of the Sri Guru Granth Sahib. Sikhism advocates people of all faiths to unite by realizing God, and union with God is the highest form of spiritual enlightenment. Author David Smith defines guru as "a teacher, spiritual guide or deity". To receive the title of guru, one must undergo a standard initiation process known as initiation, in which they receive a mantra or sacred Sanskrit phrase. Hindu sages have often renounced the world and are called guru, sadhu, rishi, swami and other names. Many people consider the words "saint" and "saint" to be synonymous. This book is a list of religious figures of Hinduism, including gurus, saints, monks, yogis, and spiritual leaders.

If you were told that we perceive the world directly without the causal intervention of the physical brain, or that we see the distant stars instantaneously without their light having to reach our sense organs, would the idea sound incredible to you? Farfetched as it may seem, this idea, the author argues, comes from the time-tested contact theory of perception. Upheld by the Indian philosophical tradition for over 2000 years, it unfolds a definitively coherent process of perception, unlike the stimulus-response theory of perception espoused by empirical science which suffers from a host of logical inconsistencies. The contact theory of perception is a paradigm-changing theory and it has the potential to take us to a domain of knowledge beyond science and to cause a radical transformation in the way we look at the universe we live in. Although a serious philosophical work, the language and lucid style of the presentation should appeal to a wide spectrum of people - from

academic philosophers to curious aspirants. If philosophy or the philosophical traditions of India interests you, you cannot afford to ignore this book. But be forewarned: it will challenge the deep-rooted ideas that have become integral to your personal consciousness!
