One Fun Book! McDougal

The 20th century gave us  
 two great theories of  
 physics: the general  
 theory of relativity, which  
 describes the behaviour of  
 things on a very large

scale, including the entire Universe; and quantum theory, which describes the behaviour of things on a very small scale, the sub-atomic world. The refusal of the Universe to reveal an equation that combines these two great ideas has caused some people to doubt our whole understanding of physics. In this landmark new book, popular science master John Gribbin tells the dramatic story of the quest that has led us to discover the true age of the Universe (13.8 billion years) and the stars (just

a little bit younger). This discovery, Gribbin argues, is one of humankind's greatest achievements and shows us that physics is on the right track to finding the 'Theory of Everything'. 13.8 provides an eye-opening look at this cutting-edge area of modern cosmology and physics, and tells the compelling story of what modern science has achieved - and what it can still achieve.

The Answer, a compelling tale, unfolds as eight friends discover they all have recently encountered an unusual elderly gentleman. Mysteriously and inexplicably, this kindly

stranger appears to them in different settings around the world. On each occasion, he delivers the same message, urging each of them to come to the aid of a place he simply calls the Island. While sharing their odd encounters, the friends become confident in the reality of their experiences and in the important truth of their visitors messages. As they deliberate making commitments to a yet-to-be-revealed vital mission, the amiable gentleman joins their conversations,

facilitating greater camaraderie while also expanding the friends consciousness of dimensions beyond their own. His mere presence is evidence that more exists than previously known. Like other books presented by Claudia, *The Answer* features characters whose gentleness, goodness, and mutual respect embody an enviable way of being.
