Reflections on Economic Development Routledge

The winners of the Nobel Prize in Economics upend the most common assumptions about how economics works in this gripping and disruptive portrait of how poor people actually live. Why do the poor borrow to save? Why do they miss out on free life-saving immunizations, but pay for unnecessary drugs? In *Poor Economics*, Abhijit V. Banerjee and Esther Duflo, two award-winning MIT professors, answer these questions based on years of field research from around the world. Called "marvelous, rewarding" by the Wall Street Journal, the book offers a radical rethinking of the economics of poverty and an intimate view of life on 99 cents a day. *Poor Economics* shows that creating a world without poverty begins with understanding the daily decisions facing the poor.

Essentials of Economics Brookings Institution Press

Over 800 million people suffer from chronic hunger, and over ten million children die each year from preventable causes. These may seem like overwhelming statistics, but as Stephen Smith shows in this call to arms, global poverty is something that we can and should solve within our lifetimes. *Ending Global Poverty* explores the various traps that keep people mired in poverty, traps like poor nutrition, illiteracy, lack of access to health care, and others and presents eight keys to escaping these traps. Smith gives readers the tools they need to help people overcome poverty and to determine what approaches are most effective in fighting it. For example, celebrities in commercials who encourage viewers to "adopt" a poor child really seem to care, but will sending money to these organizations do the most good? Smith explains how to make an informed decision. Grass-roots programs and organizations are helping people gain the capabilities they need to escape from poverty and this book highlights many of the most promising of these strategies in some of the poorest countries in the world, explaining what they do and what makes them effective.

Economics for a Developing World McGraw-Hill Education

Based on the author's extensive experience as a working planner, this book gives readers an insider's view of sub-state urban planning--the nitty-gritty details on the interplay of politics, law,

money, and interest groups. The author takes a balanced, non-judgmental approach to introduce a range of ideological and political perspectives on the operation of political, economic, and demographic forces in city planning. Unlike other books on the subject, this one is strong in its coverage of economics, law, finance, and urban governance. It examines the underlying forces of growth and change and discusses frankly who benefits and loses by particular decisions. A four-part organization covers the background and development of contemporary planning; the structure and practice of contemporary planning; fields of planning; and national planning in the United States and other nations, and planning theory. For individuals headed for a career in planning.

The crucial role played by diseases in economic progress, the growth of civilizations, and American history. In *Parasites, Pathogens, and Progress*, Robert McGuire and Philip Coelho integrate biological and economic perspectives into an explanation of the historical development of humanity and the

economy, paying particular attention to the American experience, its history and development. In their path-breaking examination of the impact of population growth and parasitic diseases, they contend that interpretations of history that minimize or ignore the physical environment are incomplete or wrong. The authors emphasize the paradoxical impact of population growth and density on progress. An increased population leads to increased market size, specialization, productivity, and living standards. Simultaneously, increased population density can provide an ecological niche for pathogens and parasites that prey upon humanity, increasing morbidity and mortality. The tension between diseases and progress continues, with progress dominant since the late 1800s. Integral to their story are the differential effects of diseases on different ethnic (racial) groups. McGuire and Coelho show that the Europeanization of the Americas, for example, was caused by Old World diseases unwittingly brought to the New World, not by superior technology and weaponry. The decimation of Native Americans by pathogens vastly exceeded that caused by war and human predation. The authors combine biological and economic analyses to explain the concentration of African slaves in the American South. African labor was more profitable in the South because Africans' evolutionary heritage enabled them to resist the diseases that became established there; conversely, Africans' ancestral heritage made them susceptible to northern "cold-weather" diseases. European disease resistance and susceptibilities were the opposite regionally. Differential regional disease ecologies thus led to a heritage of racial slavery and racism.

The Political Economy of Urbanisation in Mexico MIT Press

"This resource book discusses the economic arguments that could (and could not) be put forth to support the case for investing in the social determinants of health on average and in the reduction in socially determined health inequalities. It provides an overview and introduction into how economists would approach the assessment of the economic motivation to invest in the social determinants of health and socially determined health inequities, including what the major challenges are in this assessment. It illustrates the extent to which an economic argument can be made in favour of investment in 3 major social determinants of health areas: education, social protection, and urban development and infrastructure. It describes whether education policy, social protection, and urban development, housing and

transport policy can act as health policy"--

Politics in the American States Routledge

As developing and transition economies enter the next phase of reforms, labor market issues increasingly come to the fore. With the increased competition from globalization, the discussion is shifting to the need for greater labor market flexibility and the creation of "good" jobs. Moreover, the greater actual and perceived insecurity in labor markets has generated a new agenda on how to structure safety nets and labor market regulation. The older questions of the links between the formal and informal labor market, reappear with new dimensions and significance. More generally, it is clear that an accurate understanding of how labor market structures function is essential if we are to analyze alternative policy proposals in the wake of these concerns. Oddly enough, in spite of this great importance, there are no recent monographs that bring together rigorous studies produced by academic researchers on these various issues. This book fills that gap. Under the steely editorship of Ravi Kanbur and Jan Svejnar, the contributors flourish in their attempts to enliven these debates.

North Carolina Guidebook for Registers of Deeds Anchor Schiller's Essentials of Economics is the market leader for the one-semester survey course, praised for its strong policy focus and core theme of seeking the best possible answers to the basic questions of WHAT, HOW, and FOR WHOM to produce. The 9th

edition is benefitted by SmartBook, the first adaptive reading experience designed to engage students with the content in an active and dynamic way, as opposed to the passive and linear reading experience they are used to. As a result, students are more likely to master and retain important concepts in the survey course. As in previous editions, students are confronted early on with the reality that the economy doesn't always operate optimally, either at the macro or micro level, and are encouraged to examine the policy challenge of finding the appropriate mix of market reliance and government regulation that generates the best possible outcomes. In addition to the suite of resources available within Connect Economics, over 100 key topics are reinforced with interesting and innovative videos on YouTube, provided to help non-majors see the relevance of economics. Connect is the only integrated learning system that empowers students by continuously adapting to deliver precisely what they need, when they need it, and how they need it, so that your class time is more engaging and effective.
