The change of motion is proportional to the motive force impressed and is made in the direction of the right line in which that force is impressed. Fundamentals of Astrodynamics and

ApplicationsThe ratio of the distance from a focus to the orbit and the distance to the directrix is also a constant called the eccentricity,  $e$ . The closest point in the orbit to the primary focus,  $F$ , is the radius of periapsis,  $r_p$ . The distance  $l$  is a standard quantity used to describe conic sections. Fundamentals of Astrodynamics and ApplicationsSome of the code is available in

other languages, although not all routines are present. Examples are Java and Excel (VBA). The code is available in several languages, and it is organized roughly according to function. Where feasible, all the time routines are in one file, the math techniques in another, and so forth. Celestrak: Astrodynamics Software by David Vallado Funda
