 McDougal Littell/Houghton  
 Mifflin  
 Mitosis/Cytokinesis  
 provides a comprehensive  
 discussion of the various  
 aspects of mitosis and  
 cytokinesis, as studied  
 from different points of  
 view by various authors.  
 The book summarizes  
 work at different levels of  
 organization, including  
 phenomenological,  
 molecular, genetic, and  
 structural levels. The book  
 is divided into three  
 sections that cover the  
 premeiotic and premitotic  
 events; mitotic  
 mechanisms and  
 approaches to the study  
 of mitosis; and  
 mechanisms of  
 cytokinesis. The authors  
 used a uniform style in  
 presenting the concepts  
 by including an overview  
 of the field, a main theme,  
 and a conclusion so that a  
 broad range of biologists  
 could understand the  
 concepts. This volume  
 also explores the potential  
 developments in the  
 study of mitosis and  
 cytokinesis, providing a  
 background and  
 perspective into research  
 on mitosis and cytokinesis  
 that will be invaluable to

scientists and advanced  
 students in cell biology.  
 The book is an excellent  
 reference for students,  
 lecturers, and research  
 professionals in cell  
 biology, molecular  
 biology, developmental  
 biology, genetics,  
 biochemistry, and  
 physiology.
