*Playing It My Way* Springer  
 The protein molecule is the basic building block of every living entity. Its deficiency leads to restricted growth and development of individuals. Globally, such malnutrition is on the rise due to various reasons such as rapid population growth, stagnation of productivity, and ever-rising costs. Millions of people, especially in developing and under-developed countries, suffer from protein malnutrition and the only possible solution is to encourage farmers to grow high-protein food legume crops in their fields for domestic consumption. This, however, could be possible if farmers are provided

with new cultivars with high yield, and resistance to major insects, diseases, and key abiotic stresses. The major food legume crops are chickpea, cowpea, common bean, groundnut, lentil, pigeonpea, and soybean. Predominantly, the legume crops are grown under a subsistence level and, therefore, in comparison to cereals and horticultural crops their productivity is low and highly variable. The crop breeders around the globe are engaged in breeding suitable cultivars for harsh and changing environments but success has been limited and not up to needs. With the recent development of new technologies in plant sciences, efforts are being made to help under-privileged farmers through breeding new cultivars which will produce more protein per unit of land area. In this book, the contributors analyze the

constraints, review new technologies, and propose a future course of crop breeding programs in seven cold and warm season legume crops.

**A History of Tobacco in China, 1550-2010** Walter de Gruyter  
 "Tobacco has been pervasive in China almost since its introduction from the Americas in the mid-sixteenth century. One-third of the world's smokers--over 350 million--now live in China, and they account for 25 percent of worldwide smoking-related deaths. This book examines the deep roots of China's contemporary "cigarette culture" and smoking epidemic and provides one of the first comprehensive histories of Chinese consumption in global and comparative perspective"--  
**Digger J. Jones** Springer Nature  
 This book discusses the unique

epidemiology of fungal infections in Asia, illustrating that the situation in these countries is different from that in Western countries in terms of the causative species, natural history and management strategies. Asia, the world's largest continent and home to more than half the global population, has conditions that favor the growth of many fungi, including a number of unique species. Further, socio-economic conditions such as overcrowding, compromised health care facilities and lack of awareness add to the morbidity and mortality due to fungal diseases in this part of the world. Since the majority of Asian countries do not have good diagnostic mycology laboratories, antifungal management is often based on experience. The limited data from Asian countries suggest a very high incidence of fungal infections. This book addresses epidemiology of fungal infections in general and specific populations of Asia, fungal allergy, and diagnosis and management in resource-limited environments. The book is must read for busy clinicians, microbiologists and critical care providers.

*Jali Boy* Springer Science & Business Media

Air pollution is recognized as one of the leading contributors to the global environmental burden of disease, even in countries with relatively low concentrations of air pollution. *Air Pollution: Health and Environmental Impacts* examines the effect of this complex problem on human health and the environment in different settings around the world. |

[Psychological Perspectives on Religion and Religiosity](#) CRC Press

Is religion to blame for deadly conflicts? Should religious behaviour be credited more often for acts of charity and altruism? In what ways are religious and 'spiritual' ideas, practices and identities surviving and changing as religion loses its political power in those parts of the world which are experiencing increasing secularization? Written by one of the world's leading authorities on the psychology of religion and social identity, *Psychological Perspectives on Religion and Religiosity* offers a comprehensive and multidisciplinary review of a century of research into the origins and consequences of religious belief systems and religious behaviour. The book employs a unique theoretical framework that combines the 'new' cognitive-evolutionary psychology of religion, examining the origins of religious ideas, with the 'old' psychology of religiosity, which looks at correlates and consequences. It examines a wide range of psychological variables

and their relationship with religiosity. It is also provides fresh insights into classical topics in the psychology of religion, such as religious conversion, the relevance of Freud's ideas about religion and religiosity, the meaning of secularization, and the crucial role women play in religion. The book concludes with the author's reflections on the future for the psychology of religion as a field.

*Psychological Perspectives on Religion and Religiosity* will be invaluable for academic researchers in psychology, sociology, anthropology, political science, economics, and history worldwide. It will also be of great interest to advanced undergraduate students and graduate students across the social sciences.

*At Home in the Netherlands* uses a range of indicators to describe developments in the integration of non-Western migrants and their children in the Netherlands. Attention is focused on the situation of non-Western children in education, the position of non-Western migrants on the labour and housing markets, their representation in the crime figures and their degree of socio-cultural integration. The book also looks at civic integration, the mutual perceptions of the non-Western and indigenous populations, and the life situation of young people with a non-Western background.

[Identity](#) Fremantle Press

The field of Complementary and Alternative Medicine (CAM) is expected to grow tremendously in the next few years. In addition to an increase in the general population, the baby-boomer generation is quickly entering retirement and will likely take advantage of CAM increasingly as it ages. Although CAM research as applied to aging is just beginning and health professionals receive no special training in CAM and aging, the United States population still continues to employ it. For diagnoses that accompany aging such as cancer, neurological diseases, psychiatric disorders, and physical disabilities, CAM has often been used in addition to or in place of unsuccessful conventional methods of treatment. This new and up-to-the-minute compendium of reliable and authoritative information on complementary and alternative therapies seeks to provide information that older adults may use as they seek to improve their health and quality of life. Covering dietary means; physical, mental, and spiritual methods of treatment; and various types of therapies, this handbook is the most comprehensive and up-to-date resource on complementary and alternative medicine available today. Each

chapter or article includes: Brief definition of modality Anecdotal reports of usefulness Discussion of scientific evidence for and against modality List of resources that reader can use to find further information Examples of therapies covered include: Art & Music Massage Acupuncture Meditation Homeopathy Ayurveda Aromatherapy *Story in Children's Lives: Contributions of the Narrative Mode to Early Childhood Development, Literacy, and Learning* Springer

Originally published in 1973, this story of star-crossed lovers spotlights the complex nature of love, freedom, and racism in New Zealand. Samoan writer Albert Wendt's first novel, *Sons for the Return Home*, has long been out of print. Yet, readers continue to respond to the clarity of vision in this simple, powerful story of cross-cultural encounter.

[Integrating Engineering Education and Humanities for Global Intercultural Perspectives](#) Springer Nature

Warrongo is an extinct Australian Aboriginal language that used to be spoken in northeast Australia. This volume is largely based on the rich data recorded from the last fluent speaker. It details the phonology, morphology and syntax of the language. In particular, it provides a truly scrutinizing description of syntactic ergativity - a phenomenon that is rare among the world's language. It also shows that, unlike some other Australian languages, Warrongo has noun phrases that are configurational. Overall this volume shows what can be documented of a language that has only one speaker.

**Wind Dancer** Routledge

With the continued application of gaming for training and education, which has seen exponential growth over the past two decades, this book offers an insightful introduction to the current developments and applications of game technologies within educational settings, with cutting-edge academic research and industry insights, providing a greater understanding into current and future developments and advances within this field. Following on from the success of the first volume in 2011, researchers from around the world presents up-to-date research on a broad range of new and emerging topics such as serious games and emotion, games for music education and games for medical training, to gamification, bespoke serious games, and adaptation of commercial off-the shelf games for education and narrative design, giving readers a thorough understanding of the advances and current issues facing developers and designers regarding

games for training and education. This second volume of Serious Games and Edutainment Applications offers further insights for researchers, designers and educators who are interested in using serious games for training and educational purposes, and gives game developers with detailed information on current topics and developments within this growing area.

**Proceedings of the International Conference on Paradigms of Computing, Communication and Data Sciences** Allen & Unwin

A New York Times Best Seller! A New York Times Notable Book! A unique and sweeping debut novel of an American female combat photographer in the Vietnam War, as she captures the wrenching chaos and finds herself torn between the love of two men. On a stifling day in 1975, the North Vietnamese army is poised to roll into Saigon. As the fall of the city begins, two lovers make their way through the streets to escape to a new life. Helen Adams, an American photojournalist, must take leave of a war she is addicted to and a devastated country she has come to love. Linh, the Vietnamese man who loves her, must grapple with his own conflicted loyalties of heart and homeland. As they race to leave, they play out a drama of devotion and betrayal that spins them back through twelve war-torn years, beginning in the splendor of Angkor Wat, with their mentor, larger-than-life war correspondent Sam Darrow, once Helen's infuriating love and fiercest competitor, and Linh's secret keeper, boss and truest friend. Tatjana Soli paints a searing portrait of an American woman's struggle and triumph in Vietnam, a stirring canvas contrasting the wrenching horror of war and the treacherous narcotic of obsession with the redemptive power of love. Readers will be transfixed by this stunning novel of passion, duty and ambition among the ruins of war.

*Anthology* Department of Linguistics Research School Ralian National Unvers  
Capital punishment is irrevocable. It prohibits the correction of mistakes by the justice system and leaves no room for human error, with the gravest of consequences. There is no evidence of a deterrent effect of the death penalty. Those sacrificed on the altar of retributive justice are almost always the most vulnerable. This book covers a wide range of topics, from the discriminatory application of the death penalty, wrongful convictions, proven lack of deterrence effect, to legality of the capital punishment under international law and the morality of taking of human life.

*A Grammar of Warrongo* Springer Nature  
This collection gathers Aboriginal and non-Aboriginal voices from throughout Australia, exploring what it means to have an indigenous identity in our country today, and looking forward to a time when the "two worlds" of Australia become one. Includes transcript of the Prime Minister's Sorry speech. -- Back cover.

**Advances in Major Food Legumes**

Woodhead Publishing  
The greatest run-scorer in the history of cricket, Sachin Tendulkar retired in 2013 after an astonishing 24 years at the top. The most celebrated Indian cricketer of all time, he received the Bharat Ratna Award - India's highest civilian honour - on the day of his retirement. Now Sachin Tendulkar tells his own remarkable story - from his first Test cap at the age of 16 to his 100th international century and the emotional final farewell that brought his country to a standstill. When a boisterous Mumbai youngster's excess energies were channelled into cricket, the result was record-breaking schoolboy batting exploits that launched the career of a cricketing phenomenon. Before long Sachin Tendulkar was the cornerstone of India's batting line-up, his every move watched by a cricket-mad nation's devoted followers. Never has a cricketer been burdened with so many expectations; never has a cricketer performed at such a high level for so long and with such style - scoring more runs and making more centuries than any other player, in both Tests and one-day games. And perhaps only one cricketer could have brought together a shocked nation by defiantly scoring a Test century shortly after terrorist attacks rocked Mumbai. His many achievements with India include winning the World Cup and topping the world Test rankings. Yet he has also known his fair share of frustration and failure - from injuries and early World Cup exits to stinging criticism from the press, especially during his unhappy tenure as captain. Despite his celebrity status, Sachin Tendulkar has always remained a very private man, devoted to his family and his country. Now, for the first time, he provides a fascinating insight into his personal life and gives a frank and revealing account of a sporting life like no other.

*Pharmaceutical Microbiology* Tulika Books  
Healthy environment is important for any kind of biota on earth. It provides the basic elements of life such as clean water, fresh air, fertile soil and supports ecosystem of the food chain. Pollution drastically alters quality of the environment by changing the physico-chemical and biological

aspects of these components. Accordingly, toxic metals, combustible and putrescible substances, hazardous wastes, explosives and petroleum products are all examples of inorganic and organic compounds that cause contaminations. Specifically, pollution of toxic and heavy metal in the environment is a growing problem worldwide, currently at an alarming rate. Toxic metals threaten the aquatic ecosystems, agriculture and ultimately human health. Traditional treatment techniques offer certain advantages such as rapid processing, ease of operation and control and flexibility. But, they could not maintain the quality of the environment due to the high operational costs of chemicals used, high energy consumption and handling costs for sludge disposal and overburden of chemical substances which irreversibly affect and destroy biodiversity, which ultimately render the soil useless as a medium for plant growth. Therefore, bioremediation and biotechnology, carried out by living assets to clean up, stabilize and restore contaminated ecosystems, have emerged as promising, environmental friendly and affordable approaches. Furthermore, the use of microbes, algae, transgenic plants and weeds adapted to stressful environments could be employed to enhance accumulation efficiency. Hence, sustainable and inexpensive processes are fast emerging as a viable alternative to conventional remediation methods, and will be most suitable for developing countries. In the current volume, we discuss pollution remediation challenges and how living organisms and the latest biotechnological techniques could be helpful in remediating the pollution in ecofriendly and sustainable ways.

*Contemporary Clinical Psychology* Springer Publishing Company

Billy is drifting, looking for a place to land. A young school teacher, he arrives in Australia's remote far north in search of his own history, his Aboriginality, and his future. He finds himself in a region of abundance and beauty but also of conflict, dispossession and dislocation. On the desperate frontier between cultures, Billy must find his place of belonging.

**Air Pollution** Springer Nature

This is a collection of over a hundred essays on alternatives to the dominant processes of globalized development, including its structural roots in modernity, capitalism, state domination, and masculinist values. The book presents views and practices from around the world in a collective search for an ecologically and socially just world.

**Current Evidence in Endovascular**

**Surgery** John Wiley & Sons

Ending poverty and stabilizing climate change will be two unprecedented global achievements and two major steps toward sustainable development. But the two objectives cannot be considered in isolation: they need to be jointly tackled through an integrated strategy. This report brings together those two objectives and explores how they can more easily be achieved if considered together. It examines the potential impact of climate change and climate policies on poverty reduction. It also provides guidance on how to create a “win-win” situation so that climate change policies contribute to poverty reduction and poverty-reduction policies contribute to climate change

mitigation and resilience building. The key finding of the report is that climate change represents a significant obstacle to the sustained eradication of poverty, but future impacts on poverty are determined by policy choices: rapid, inclusive, and climate-informed development can prevent most short-term impacts whereas immediate pro-poor, emissions-reduction policies can drastically limit long-term ones.

*Proceedings of the Conference “Integrating Engineering Education and Humanities for Global Intercultural Perspectives”, 25-27 March 2020, St. Petersburg, Russia* Univ. of Queensland Press  
Educational Innovations and

Contemporary Technologies  
Enhancing Teaching and Learning

*Sons for the Return Home* University of Hawaii Press

This book presents papers from the International Conference on Integrating Engineering Education and Humanities for Global Intercultural Perspectives (IEEHGIP 2020), held on 25–27 March 2020. The conference brought together researchers and practitioners from various disciplines within engineering and humanities to offer a range of perspectives. Focusing on, but not limited to, Content and Language Integrated Learning (CLIL) in Russian education the book will appeal to a wide academic audience seeking ways to initiate positive changes in education.
