 Inhaltsangabe: Introduction: During a rail or airplane trip on an early midweek s morning men in suits working on their laptops or reading the latest newspaper are a common scene. This might lead to the assumption that business travellers are important customers to the tourism and travel industry and companies spend large sums on the trips of their employees. Indeed this impression can be proven right. Such 30-40% of all travel in Germany is business driven. In average companies spent 3,9% up

to 5% of their yearly indirect cost on business travel. In a globalized market business travel is important and necessary for companies. It is an investment which influences the performance of a company positively if applied correctly. However as for every investment costs are attached which need to be validated upon their necessity and their cost-benefit ratio. Furthermore for business travel aspects like security, work time, employee wellbeing and other factors must be considered to increase the positive outcome for the company. There is a clear requirement for business travel and its management which will be explained in more detail during this thesis. However still many companies are not aware of the cost factor of business travel. Even if certain awareness has been established often still no clear strategy is in place to improve the value for money and avoid yearly cost increases. To create such a strategy it is necessary to have a good understanding of the travel industry, their relevant players and the companies travel structure. Motivation: Business travel management i.e. the professional organisation of business travel has just developed during the last 50 years. Globalisation and development of transportation caused a quick increase during the last years of the business travel industry. In 2008 German companies spend 46.6 billion Euros on business travel. The strategic management of business travel requirements however is still not common in every company. Though scientific, universal literature about business travel management is limited. Only a small number of authors give directions upon how to implement a complete travel management system in a company. In many cases the available theoretical literature has no practical tips for users. On the other hand there are many white papers, studies and articles available which are up to date, give practical tips, however only refer to one aspect of the travel process. This implies that inexperienced [...] *Strategies for Small Manufacturers* McGraw-Hill Ryerson

Four questions determine whether a company is using interorganizational cost management. Does your firm set specific cost-reduction objectives for its suppliers? Does your firm help its customers and/or suppliers find ways to achieve their cost-education objectives? Does your firm take into account the profitability of its suppliers when negotiating component pricing with them? Is your firm continuously making its buyer-supplier interfaces more efficient? If the answer to any of these questions is "no", your firm risks introducing products that cost too much or are not competitive. The full potential of the supply network can be realized only when the entire supply chain adopts interorganizational cost management practices. Competitive pressure has led many firms to try to increase the efficiency of supplier firms through interorganizational cost management systems, a structured approach to coordinating the activities of firms in a supplier network to reduce the total costs in the network. It is particularly important to lean enterprises for two reasons: Lean enterprises typically outsource more of the added value of their products than their mass producer counterparts. Lean enterprises usually compete more aggressively and must manage costs more effectively. Interorganizational cost management can reduce costs in three ways: through product design, through product manufacture and through cooperative approaches between buyers and suppliers to build smoother interfaces. However, more than just cost management must cross interorganizational boundaries. Suppliers are also a major source of innovation for lean enterprises. Successful supplier networks encourage every firm in the network to innovate and compete more aggressively. Read this book to learn to manage the supply chain to forge competitive advantage while reducing costs.

Consulting frameworks are what consultants use to frame a problem as well as its solution. Consulting is a specialty of problem solving, and these frameworks act as shortcuts to problem solving. It doesn't mean that they are exclusive to consulting! anyone can learn them to help improve their problem solving skills! For the ones interested in joining consulting, practicing 1000 cases doesn't help if you don't use a framework consistently. Therefore a better approach for preparation is to understand and memorize the frameworks followed by a few cases only to store the framework in your long-term memory. Many applicants practice cases for months and then are surprised that the cases during the interview are not similar. I don't need to belabor this point too much--you get it. Learn how to think with frameworks rather than brute force your way through an unhealthy amount of cases. If you want practice cases, most if not all consulting firms offer their own cases online and for free. Those are more than enough to practice.
