How Physics and Scientific Thinking Illuminate the Universe and the Modern World Simon and Schuster

Fleeing his pricey Notting Hill apartment in the middle of the night in his pajamas, William Gadget, a wealthy, high-profile London banker claiming that he is in fear for his life, seeks refuge with his four best friends--Min, a free-spirited heiress; Jemal, the

reluctant host of TV gardening show; Dallas, a pot-smoking actor looking for his big break; and Mac, a rugged mercenary. A first novel. Original.

Knocking on Heaven's Door Simon & Schuster Books for Young Readers

Join George and Annie as they explore the galaxy in this cosmic adventure series from acclaimed scientist Stephen Hawking and his daughter Lucy Hawking. George's parents, who have always been wary of technology, warn him about their new neighbors, especially the girl George's age, Annie, who seems to be

following in her scientist father's footsteps. But when George befriends them and Cosmos, their super-computer, he finds himself on wildly fun adventures through the galaxy that explore themes of physics, evolution, environmental conservation, and time travel. This complete paperback collection includes:

George's Secret Key to the Universe
George's Cosmic Treasure Hunt
George and the Big Bang
George and the Unbreakable Code
George and the Blue Moon
George and the Ship of Time

The Cost of Hidden Stress Simon and Schuster

When George and Annie are selected as junior astronauts, it is a dream come true until they learn that strange things are happening on Earth as well as in the skies.

George and the Unbreakable Code Penguin Books

Follows the adventures of a young boy and his neighbor friend as they travel through a computer portal into outer space, where they explore such mysteries as black holes and the origins of the universe, while trying to evade an evil scientist.

Not Your Typical Dragon Simon and Schuster

Junior Library Guild Selection * Kids' Indie Next List Pick From Leslie Connor, award-winning author of *Waiting for Normal* and *Crunch*, comes a soaring and heartfelt story about love, forgiveness, and how innocence makes us all rise up. *All Rise for the Honorable Perry T. Cook* is a powerful story, perfect for fans of *Wonder* and *When You Reach Me*. Eleven-year-old Perry was born and raised by his mom at the Blue River Co-ed Correctional Facility in tiny Surprise, Nebraska. His mom is a resident on Cell Block C, and so far Warden Daugherty has made it possible for them to be together. That is, until a new district attorney discovers the truth—and Perry is removed from the facility and

forced into a foster home. When Perry moves to the "outside" world, he feels trapped. Desperate to be reunited with his mom, Perry goes on a quest for answers about her past crime. As he gets closer to the truth, he will discover that love makes people resilient no matter where they come from . . . but can he find a way to tell everyone what home truly means?

All Rise for the Honorable Perry T. Cook Macmillan

Best known for his general theory of relativity and the famous equation linking mass and energy, $E = mc^2$, Albert Einstein had a lasting impact on the world of science, the extent of which is illuminated—along with his fascinating life and unique personality—in this lively history. In addition to learning all about Einstein's important contributions to science, from proving the existence and size of atoms and launching the field of quantum mechanics to creating models of the universe that led to the discovery of black holes and the big bang theory, young physicists will participate in activities and thought experiments to bring his theories and ideas to life. Such activities include using dominoes to model a nuclear chain reaction, replicating the expanding universe in a microwave oven, creating blue skies and red sunsets in a soda bottle, and calculating the speed of light using a melted chocolate bar. Suggestions for further study, a time line, and sidebars on the work of other physicists of the day make this an incredibly accessible resource for inquisitive children.

NATIONAL BESTSELLER In this accessible and groundbreaking book -- filled with the moving stories of real people -- medical doctor and bestselling author of *Scattered Minds*, Gabor Maté, shows that emotion and psychological stress play a powerful role in the onset of chronic illness. Western medicine achieves spectacular triumphs when dealing with acute conditions such as fractured bones or life-threatening infections. It is less successful against ailments not susceptible to the quick ministrations of scalpel, antibiotic or miracle drug. Trained to consider mind and body separately, physicians are often helpless in arresting the advance of most of the chronic diseases, such as breast cancer, rheumatoid arthritis, Crohn's disease, multiple sclerosis, fibromyalgia, and even Alzheimer's disease. Gabor Maté has found that in all of these chronic conditions, there is a common thread: people afflicted by these diseases have led lives of excessive stress, often invisible to the individuals themselves. From an early age, many of us develop a psychological coping style that keeps us out of touch with the signs of stress. So-called negative emotions, particularly anger, are suppressed. Dr. Maté writes with great conviction that knowledge of how stress and disease are connected is essential to prevent illness in the first place, or to facilitate healing. *When the Body Says No* is an impressive contribution to current research on the physiological connection between life's stresses and emotions and the body systems governing nerves, immune apparatus and hormones. With great compassion and erudition, Gabor Maté demystifies medical science and, as he did in *Scattered Minds*, invites us all to be our own health advocates. Excerpt from *When the Body Says No* "Only an intellectual luddite would deny the enormous

benefits that have accrued to humankind from the scrupulous application of scientific methods. But not all aspects of illness can be reduced to facts verified by double-blind studies and by the strictest scientific techniques. We confine ourselves to a narrow realm indeed if we exclude from accepted knowledge the contributions of human experience and insight. . . . "In 1892 William Osler, one of the greatest physicians of all time, suspected rheumatoid arthritis to be a stress-related disorder. Today rheumatology all but ignores that wisdom, despite the supporting scientific evidence that has accumulated in the 110 years since Osler first published his text. That is where the narrow scientific approach has brought the practice of medicine. Elevating modern science to be the final arbiter of our sufferings, we have been too eager to discard the insights of previous ages."

The amazing story of how the world's greatest fossilist found her first huge find at the age of twelve. Mary was born in 1799 in Lyme Regis, England, to a poor family. She and her older brother were the only two of ten children to survive. Her father, a carpenter and part-time fossil hunter, taught his children to look for fossils. When her father injured himself and was unable to work, Mary quit school and took up fossil hunting full-time to help support her family, a task that became even more important when her father died, leaving the Annings in debt. At the age of

twelve, Mary, with her older brother Joe, found what they believed to be the skeleton of a gigantic crocodile, the Great Croc of the legends. Between dodging her rival fossil hunter, the Curiman, and the sheer work of carefully digging out the fossil, Mary took almost a year to excavate what would later be termed the Ichthyosaurus. Mary Anning may have been uneducated, poor and a woman, but her life's work of fossil hunting led her to make many discoveries that influenced our understanding of prehistoric creatures and the age of the Earth. In 2010, Mary was named among the ten British women who have most influenced the history of science. Charles Darwin even cited Mary's fossilized creatures as evidence in his book *On the Origin of Species*. In this triumphant novel about scientific discovery, Monica Kulling brings Mary Anning and her world to life for young readers. George travels to the future in the epic conclusion of the George's Secret Key series from Lucy Hawking. When George finds a way to escape the spacecraft Artemis, where he has been trapped, he is overjoyed. But something is wrong. There's a barren wasteland where his hometown used to be, intelligent robots roam the streets, and no one will talk to George about the Earth that he used to know. With the help of an unexpected new friend, can George find out what—or who—is behind this terrible new world, before it's too late?

(An eSpecial from New American Library) Chicago Review Press In their bestselling book for young readers, noted physicist Stephen Hawking and his daughter, Lucy, provide a grand and funny adventure that explains fascinating information about our universe, including Dr. Hawking's latest ideas about black holes. It's the story of George, who's taken through the vastness of space by a scientist, his daughter, and their super-computer named Cosmos. George's Secret Key to the Universe was a New York Times bestseller and a selection of AI's Book Club on the Today show.

The Life and Times of Leading Physicists from Galileo to Hawking Bantam

George and Annie are off on another cosmic adventure to figure out why strange things are happening on Earth in the fourth book of the George's Secret Key series from Stephen and Lucy Hawking. George and his best friend Annie haven't had any space adventures for a while and they're missing the excitement. But not for long, because seriously strange things have started happening. Banks are handing out free money, supermarkets aren't able to charge for their products so people are getting free food, and aircrafts are refusing to fly. It looks like the world's biggest and best computers have all been hacked. And no one knows why... It's up to George and Annie to travel further into space than ever before in order to find out what—or who—is behind it.

"It is said that fact is sometimes stranger than fiction, and nowhere is that more true than in the case of black holes. Black holes are stranger than anything dreamed up by science fiction writers." In 2016 Professor Stephen Hawking delivered the BBC Reith Lectures on a subject that fascinated him for decades - black holes. In these flagship lectures the legendary physicist argued that if we could only understand black holes and how they challenge the very nature of space and time, we could unlock the secrets of the universe.

"Science has a battle for hearts and minds on its hands....How good it feels to have Lisa Randall's unusual blend of top flight science, clarity, and charm on our side." —Richard Dawkins
"Dazzling ideas....Read this book today to understand the science of tomorrow." —Steven Pinker The bestselling author of *Warped Passages*, one of *Time* magazine's "100 Most Influential People in the World," and one of *Esquire's* "75 Most Influential People of the 21st Century," Lisa Randall gives us an exhilarating overview of the latest ideas in physics and offers a rousing defense of the role of science in our lives. Featuring fascinating insights into our scientific future born from the author's provocative conversations with Nate Silver, David Chang, and Scott Derrickson, *Knocking on Heaven's Door* is eminently readable, one of the most important popular science books of this or any year. It is a necessary volume for all who admire the work of Stephen Hawking, Michio Kaku, Brian Greene, Simon Singh, and Carl Sagan; for anyone curious about the workings and aims of the Large Hadron Collider, the biggest and most expensive machine ever built by mankind; for those who firmly believe in the importance of science and rational thought; and for anyone interested in how the Universe began...and how it might ultimately end.
