"Exploring television at once as a technological medium, an economic system, a facet of democracy, and a part of everyday life, this landmark text uses numerous case studies to demonstrate the past, immediate, and far-reaching effects of American culture on television - and television's influence on American culture. Arranged topically, the book provides a broad historical overview of television while also honing in on such finer points as the formal attributes of its various genres and its role in gender and racial identity formation." "Replete with examples, this pedagogically rich text includes many end-of-chapter case studies and narratives with suggestions for further reading - and, appropriately, viewing. Illustrations and photographs - primarily DVD grabs - contextualize historical footage and older television programs that may not be familiar to younger students." --Book Jacket.

This book explores the issue of civilian devastation in modern warfare, focusing on the complex processes that effectively establish civilians' identity in times of war. Underpinning the physicality of war's tumult are structural forces that create landscapes of civilian vulnerability. Such forces operate in four sectors of modern warfare: nationalistic ideology, state-sponsored militaries, global media, and international institutions. Each sector promotes its own constructions of civilian identity in relation to militant combatants: constructions that prove lethal to the civilian noncombatant who lacks political power and decision-making capacity with regards to their own survival. Civilians and Modern War provides a critical overview of the plight of civilians in war, examining the political and normative underpinnings of the decisions, actions, policies, and practices of major sectors of war. The contributors seek to undermine the 'tunnelling effect' of the militaristic framework regarding the experiences of noncombatants. This book will be of much interest to students of war and conflict studies, ethics, conflict resolution, and IR/Security Studies.

Developers who want to access USB devices from their embedded systems will find a helpful resource in USB Embedded Hosts: The Developer's Guide. This new book from the author of USB Complete shows how small systems can take advantage of the same wealth of USB devices available to conventional PCs. The book begins with a review of USB host communication protocols. Readers then learn which USB host requirements are relaxed for embedded systems and what new requirements some embedded systems must meet. To help in selecting a development platform, the

book explores available hardware and software for USB host communications in small systems. The heart of the book focuses on communicating with USB devices. The topics (with example code) include USB drives, keyboards, virtual serial ports, network bridges, mics, speakers, video cameras, and printers, plus devices that don't fit defined USB classes. Also discussed are systems that support both USB host and device functions. The example code is written for the BeagleBoard-xM open development board using a distribution of Linux targeted to small systems. Also covered is how to use Linux commands and utilities to learn about, monitor, and debug communications with USB devices.

Massively parallel processing is currently the most promising answer to the quest for increased computer performance. This has resulted in the development of new programming languages and programming environments and has stimulated the design and production of massively parallel supercomputers. The efficiency of concurrent computation and input/output essentially depends on the proper utilization of specific architectural features of the underlying hardware. This book focuses on development of runtime systems supporting execution of parallel code and on supercompilers automatically parallelizing code written in a sequential language. Fortran has been chosen for the presentation of the material because of its dominant role in high-performance programming for scientific and engineering applications.

From the author of *The Real History Behind the Templars--the origins and stories behind end-of-the-world predictions throughout history, from Revelations to 2012*. In entertaining and sharp prose, historian Sharan Newman explores theories of world destruction from ancient times up to the present day- theories which reveal as much about human nature as they do about the predominant historical, scientific, and religious beliefs of the time. Readers will find answers to the following end-of-times questions: ?Did the Mayans really say the world will end in December 2012? ?How have the signs in the New Testament Book of Revelations been interpreted over the years? ?How did ancient Egyptians, Norse, and Chinese think the world would end? ?When did Nostradamus predict that the last days would come? ?Does the I Ching reference 2012? ?Why didn't the world end in Y2K? ?Are meteors, global warming, super-volcanoes, and the threat of nuclear war signs that the end is near?
