Stories We Want What We Want
 A recent endogenous growth literature has focused on the transition from a Malthusian world where real wages were linked to factor endowments, to one where modern growth has broken that link. In this paper we present evidence on another, related phenomenon: the dramatic reversal in distributional trends -- from a steep secular fall to a steep secular rise in wage-land rent ratios -- which occurred some time early in the 19th century. What explains this reversal? While it may seem logical to locate the causes in the Industrial Revolutionary forces emphasized by endogenous growth theorists, we provide evidence that something else mattered just as much: the opening up of the European economy to international trade.

Cycle World House of Anansi
 An Esquire Best Book of Summer • A collection of glittering, surprising, darkly funny stories of people testing the boundaries of their lives—from the award-winning author of *Dual Citizens*, who is "spoken of in the same reverent breath as Lorrie Moore and Joy Williams" (Heidi Julavits, author of *The Folded Clock*). In the mordantly funny "Money, Geography, Youth," Vanessa arrives home from a gap year volunteering in Ghana to find that her father is engaged to her childhood best friend. Unable to reconcile the girl she went to dances with in the eighth grade and the woman in her father's bed, Vanessa turns to a different old friendship for her own, unique diversion. In the subversive "The Brooks Brothers Guru," Amanda drives to

upstate New York to rescue her gawky cousin from a cult, only to discover clean-cut, well-dressed men living in a beautiful home, discussing the classics, and drinking sophisticated cocktails, moving her to wonder what freedoms she might willingly trade away for a life of such elegant comfort. And in "The Universal Particular," Tamar welcomes her husband's young stepcousin into their home, imagining they are saving this young woman from Somalia by way of Stockholm, only to find their cool suburban life of potlucks and air-conditioning knocked askew in ways they cannot quite understand. Populated with imperfect families, burned potential, and inescapable old flames, the thirteen stories in *We Want What We Want* are, each one, diamond-sharp—sparkling with pain, humor, and beauty.

Heckscher-Ohlin Trade Theory Knopf
 Blast back to discover what life was like on the Titanic! You may have heard of the movie *Titanic*, but what was life on the actual *Titanic* really like? This engaging nonfiction book, complete with black and white interior illustrations, will make readers feel like they've traveled back in time. It covers everything from how the ship was built to what the passengers did for fun, and more. Find out interesting, little-known facts such as how the anchor was so heavy that they needed to use twenty horses to lift it and how the ship's musicians continued to play as the ship sank. The unique details, along with the clever illustrations, make this series stand out from the competition.

An Oligopolistic Extension of the Heckscher-Ohlin Model Knopf
 This study discusses the Heckscher-Ohlin factor-proportions theory of comparative advantage, which states that

international commerce compensates for the uneven geographic distribution of productive resources, that traded commodities are really bundles of factors (land, labor, and capital), and that the exchange of commodities internationally is therefore indirect arbitrage, transferring the services of otherwise immobile factors of production from locations where these factors are abundant to locations where they are scarce. Under some circumstances, this indirect arbitrage can completely eliminate price differences. Despite new models in trade theory and evidence from trade theorists suggesting that the H-O model is faulty, the theory is still extraordinarily useful: pedagogically, in correcting the assumptions of the partial-equilibrium with regard to labor supply and wage rates; politically, in showing that although tariffs and quotas have redistributive effects, they reduce efficiency; and empirically, in explaining important aspects of the patterns of international trade. The H-O model is essential for any study of the impact of globalization on the American workforce. *When Force is Justified and Why* Simon and Schuster

A New York Times Editors' Choice and an Oprah's Book Club Summer Reading Pick In this brilliant new collection, Scotiabank Giller Prize and Rogers Writers' Trust Fiction Prize nominee Alix Ohlin skillfully displays the full range of human emotions through the subtly powerful dramas of everyday life. In "You Are What You Like" a young couple finds their life derailed by the arrival of a hard-partying old friend. In "Robbing the Cradle" Lisette does everything she can to give her husband a baby, committing an act of desperation. In "The Idea Man" Beth, a divorcee, falls in love with a man who lies for fun. And in the incredible

title story, Kathleen finds herself sitting at the hospital bedside of a man she had planned to divorce, comforted by the woman she went out of her way to hurt. These characters are divorced and beginning to date again, childless and longing for children, married and aching for more. Often unexpected and unsettling, always fascinating, *Signs and Wonders* showcases a young writer of remarkable range and emotional depth.

Babylon and Other Stories Mit Press
The field of International Economics is very dynamic and is characterized, as it is, by continuous changes in many variables which shape the structure and nature of the global economy and set the trends. The book has been thoroughly revised and modified to incorporate significant changes and trends since the publication of the fifth edition more than a decade ago. The current edition, coming after five revised editions, is characterized by updating of information and significant modifications and recasting of most of the chapters. Salient Features: ✓ Information has been updated throughout the book. ✓ The following chapters have been thoroughly modified and restructured: • International Economic Gap and NIEO • Global Trade • Globalisation • Economic Integration and Cooperation • International Monetary System • Foreign Exchange • International Liquidity and Reserves • International Capital Flows • Multinational Corporations • Transfer of Technology • Official Development Assistance • International Debt • International Migration • Trade and BOP of India • IMF and Development Organisations • World Trade Organisation • Trade Regulation and Promotion

Always, Forever Simon and Schuster
Nothing is as it seems in this darkly

romantic tale of infatuation and possession, inspired by Daphne du Maurier's Rebecca. Becca was the perfect girlfriend: smart, gorgeous, and loved by everyone at New England's premier boarding school, Thorn Abbey. But Becca's dead. And her boyfriend, Max, can't get over his loss. Then Tess transfers to Thorn Abbey. She's shy, insecure, and ordinary—everything that Becca wasn't. And despite her roommate's warnings, she falls for brooding Max. Now Max finally has a reason to move on. Except it won't be easy. Because Becca may be gone, but she's not quite ready to let him go...

Putting the Factor-price-equalization Theorem Back Into History MIT Press

Abstract: There are two contrasting views of pre-19th century trade and globalization. First, there are the world history scholars like Andre Gunder Frank who attach globalization 'big bang' significance to the dates 1492 (Christopher Columbus stumbles on the Americas in search of spices) and 1498 (Vasco da Gama makes an end run around Africa and snatches monopoly rents away from the Arab and Venetian spice traders). Such scholars are on the side of Adam Smith who believed that these were the two most important events in recorded history. Second, there is the view that the world economy was fragmented and completely de-globalized before the 19th century. This paper offers a novel way to discriminate between these two competing views and we use it to show that there is no evidence that the Ages of Discovery and Commerce had the economic impact on the global economy that world historians assign to them, while there is plenty of evidence of a very big bang in the 19th century. The test involves a close look at the connections between factor prices,

commodity prices and endowments world wide.

Consent Simon and Schuster

A review of the theoretical twists and turns in the development of the Heckscher-Ohlin model and an empirical assessment of the basic model and three related theorems. No names are more closely associated with modern trade theory than Eli Heckscher and Bertil Ohlin. The basic Heckscher-Ohlin proposition, according to which a country exports factors in abundant supply and imports factors in scarce supply, is a key component of modern trade theory. In this book, Robert Baldwin traces the development of the HO model, describing the historical twists and turns that have led to the basic modern theoretical model in use today. Baldwin not only presents a clear and cohesive view of the model's evolution but also reviews the results of empirical tests its various versions. Baldwin, who published his first theoretical article on the HO model in 1948, first surveys the development of the HO model and then assesses empirical tests of its predictions. Most discussions of empirical work on HO models confine themselves to the basic theorem, but Baldwin devotes a chapter to empirical tests of three related propositions: the Stolper-Samuelson theorem; the Rybczynski theorem; and the factor price equalization theorem. He concludes that the formulation and testing of these later models have improved economists' understanding of the forces shaping international trade, but that many empirical trade economists (himself included) were so enamored of the elegant but highly unrealistic factor price equalization models developed from the insights of Heckscher and Ohlin that they have

neglected investigation of other models without this relationship.

Indexes the world's zoological and animal science literature, covering all research from biochemistry to veterinary medicine. The database provides a collection of references from over 4,500 international serial publications, plus books, meetings, reviews and other non-serial literature from over 100 countries. It is the oldest continuing database of animal biology, indexing literature published from 1864 to the present. Zoological Record has long been recognized as the "unofficial register" for taxonomy and systematics, but other topics in animal biology are also covered.

A Review Taylor & Francis US

A Scotiabank Giller Prize Finalist Raised in Montreal by their disinterested single mother, half-sisters Lark and Robin form a fierce team in spite of their differences. When Lark flees to America to attend college, her sister soon joins her. But even as Lark discovers a calling working in documentary film, she struggles with self-doubt, and Robin chafes against the demands of studying piano at Juilliard. Their bond strains under increasing pressure until it breaks. Years later, Lark's life is in tatters and Robin's is wilder than ever. As Lark tries to take charge of her destiny, she discovers that despite the difficulties of their relationship, there is only one person she can truly rely on: her sister. A gripping, unforgettable novel about art, ambition, sisterhood, motherhood, and

self-knowledge, *Dual Citizens* captures the unique language of sisters and makes visible the imperceptible strings that bind us to the ones we love for good.

A Test of the General Validity of the Heckscher-Ohlin Theorem for Trade in the European Community Vintage

"A skillful storyteller . . . attractively quick-witted and wry." —J. M. Coetzee
 "Ohlin has a great eye, a great ear, and all the other equipment auguring a very successful future." —Jay McInerney
 "Expect to hear her spoken of in the same reverent breath as Lorrie Moore and Joy Williams." —Heidi Julavits
 From the highly acclaimed author of *The Missing Person* and *Babylon and Other Stories*, a resonant novel of entwined lives and a woman with an unsettling ability to broach the innermost dynamics of the people around her. When Grace, an exceedingly competent and devoted therapist in Montreal, stumbles across a man who has just failed to hang himself, her instinct to help kicks in immediately. Before long, however, she realizes that her feelings for this charismatic, extremely guarded stranger are far from straightforward. In the meantime, her troubled teenage patient, Annie, runs away from home and soon will reinvent

herself in New York as an aspiring and ruthless actress, as unencumbered as humanly possible by any personal attachments. And Mitch, Grace's ex-husband, who is a therapist as well, leaves the woman he's desperately in love with to attend to a struggling native community in the bleak Arctic. We follow these four compelling, complex characters from Montreal and New York to Hollywood and Rwanda, each of them with a consciousness that is utterly distinct and urgently convincing. With razor-sharp emotional intelligence, *Inside* poignantly explores the many dangers as well as the imperative of making ourselves available to—and responsible for—those dearest to us. This ebook edition includes a Reading Group Guide.

Bertil Ohlin McGraw-Hill Education

"An intense bond between high school senior Bea and her music teacher turns into a passionate affair, but when their affair turns into a scandal, Bea wonders if their romance was ever real"--

Preferential Trade Arrangements, Induced Investment, and National Income in a Heckscher-Ohlin-Ramsey Model Oxford University Press

Bertil Ohlin, international trade theorist, winner of the 1977 Nobel Prize in Economics, and leader of the Swedish Liberal Party for more than twenty years, is considered to be the major single influence on the development of international economics in the twentieth century. This volume, celebrating the centennial of Ohlin's birth, examines his life and his influence on modern economic thought. It also contains the first English translation of his licentiate thesis, in which he first set out his theory of international trade.

An Input-output Study Cambridge University Press

Abstract: Due primarily to transport improvements, commodity prices in Britain and America tended to equalize 1870-1913. This commodity price equalization was not simply manifested by the great New World grain invasion of Europe. Rather, it can be documented for intermediate primary products and manufactures as well. Heckscher and Ohlin, writing in 1919 and 1924, thought that these events should have contributed to factor price equalization. Based on Williamson's research reported elsewhere, Anglo-American real wages did converge over this period, and it was part of a general convergence between the Old and New World. This paper applies the venerable Heckscher-Ohlin trade model to the late 19th century Anglo-American experience and finds that they were right: at least half of the real wage convergence observed can be assigned to commodity price equalization. Furthermore, these events also had profound influences on relative land and capital scarcities. It appears that this late 19th century episode was the dramatic start of world commodity and factor market integration that is still ongoing today.

We Want What We Want Stories Knopf

Signs and Wonders MIT Press

A review of the Heckscher-Ohlin framework prompts a noted economist to consider the methodology of economics. In this spirited and provocative book, Edward Leamer turns

an examination of the Heckscher-Ohlin framework for global competition into an opportunity to consider the craft of economics: what economists do, what they should do, and what they shouldn't do. Claiming "a lifetime relationship with Heckscher-Ohlin," Leamer argues that Bertil Ohlin's original idea offered something useful though vague and not necessarily valid; the economists who later translated his ideas into mathematical theorems offered something precise and valid but not necessarily useful. He argues further that the best economists keep formal and informal thinking in balance. An Ohlinesque mostly prose style can let in faulty thinking and fuzzy communication; a mostly math style allows misplaced emphasis and opaque communication. Leamer writes that today's model- and math-driven economics needs more prose and less math. Leamer shows that the Heckscher-Ohlin framework is still useful, and that there is still much work to be done with it. But he issues a caveat about economists: "What we do is not science, it's fiction and journalism." Economic theory, he writes, is fiction (stories, loosely connected to the facts); data analysis is journalism (facts, loosely connected to the stories). Rather than titling the two sections of his book *Theory and Evidence*, he calls them *Economic Fiction* and *Econometric Journalism*, explaining, "If you find that startling, that's good. I am trying to keep you awake."
