Management Information Systems
 Prentice Hall

"We wrote this book for business school students who wanted an in-depth look at how today's business firms use information technologies and systems to achieve corporate objectives. Information systems are one of the major tools available to business managers for achieving operational excellence, developing new products and services, improving decision making, and achieving competitive advantage. Students will find here the most up-to-date and comprehensive overview of information systems used by business firms today. After reading this book, we expect students will be able to participate in, and even lead, management discussions of

information systems for their firms. The 14th edition features all new opening, closing, and Interactive Session cases. The text, figures, tables, and cases have been updated with the latest sources from industry and MIS research"--

Effective Management Information Systems Irwin Professional Publishing

This introductory book on Management Information Systems (MIS) is designed to serve as a text for the students of management (BBA and MBA) and computer applications (BCA and MCA).

Today, many management information systems are in widespread use by the managers at operational, middle and senior levels. This book will be equally useful to working executives and professionals who wish to grasp the essentials of management information systems. This book discusses all the major areas in information systems with contemporary issues and their effects on business and organization. The main focus is on practical orientation and application of information systems and the emphasis is on real business scenarios. Each chapter provides spotlights on organization, technology or management related to the topics discussed. The book provides a broad treatment of the core topics of MIS, namely databases, data communication, e-commerce, supply chain management, customer relationship management, decision support systems, knowledge management, and also the ethical and social issues involved in information systems. It also discusses the development methodologies of system analysis and design which enable the actual information systems to be built to meet the needs of an organization. Case studies based on management of business information provide the students with insight into the actual processes involved.

Management Information System IGI Global

One semester, Jr/Sr/Grad course in systems analysis and design, or capstone course in MIS departments where students work on a project or extensive case. McLeod and Jordan's text is ideal for courses where student teams develop and implement software systems in real organizations, or where students develop software to solve problems in written cases. The text is organized into nine

chapters and eight supporting technical modules: the chapters provide a unique, thorough coverage of the entire system development life cycle (SDLC), and a strong foundation in systems concepts and systems methodologies, while the technical modules provide the tools students need to implement and apply the concepts. The goal of the text is to provide a strong foundation of the concepts, with emphasis on the later phases of actual implementation and design, providing the methodologies and tools necessary to complete a systems project in a real organization, including installation of operational software. It has been successfully class-tested by over 400 students.
