Education has been considered as the most important input and the most potent instrument for the development of an individual. It is the key to national prosperity and welfare and that no investment is too great for it. It is evident that education has a very important role to play in the economic and social development of the country, in the building up of the truly democratic society, in the promotion of national integration and unity, and above all for the transformation of individual in the endless pursuit of excellence and perfection. The students in a classroom have different socio-

economic status, aptitudes, interests, attitudes etc. and among them have different IQ levels. In a classroom situation where the students are varied in learning levels, (i.e., average, below average and above average) most of the time teachers teach for the average, neglecting the above average and below average in their hurry to finish the syllabus. In the classroom the above average feel bored and the slow-learners remain passive and day-by-day become poor in the subject.

This Edited Volume engages with concepts of gender and identity as they are mobilized in research to understand the experiences of learners, teachers and practitioners of physics. The focus of this collection is on extending theoretical understandings of identity as a means to explore the construction of gender in physics education research. This collection expands an understanding of gendered participation in physics from a binary gender deficit model to a more complex understanding of gender as performative and intersectional with other social locations (e.g., race, class, LGBT status, ability, etc). This volume contributes to a growing scholarship using sociocultural frameworks to understand learning and participation in physics, and that seeks to challenge dominant understandings of who does physics and what counts as physics competence. Studying gender in physics education research from a perspective of identity and identity construction allows us to understand participation in physics cultures in new ways. We are able to see how identities shape and are shaped by inclusion and exclusion in physics practices, discourses that dominate physics cultures, and actions that maintain or challenge structures of dominance and subordination in physics education. The chapters offered in this book focus on understanding identity and its usefulness in various contexts with various learner or practitioner populations. This scholarship collectively presents us with a broad picture of the complexity inherent in doing physics and doing gender.
