Annual Report Routledge

In bringing to the readers
the book 5G Multimedia
Communication:

Technology, Multiservices
and Deployment, the aim
is to present current work
and direction on the
challenging subject of
multimedia

communications, with
theoretical and practical
roots. The past two
decades have witnessed
an extremely fast
evolution of mobile
cellular network
technology. The fifth
generation of mobile
wireless systems has
achieved the first
milestone toward
finalization and
deployment by 2020. This
is vital to the
development of future
multimedia
communications. Also, it
is necessary to consider

5G technology from the
performance point of view
by analyzing network
capabilities to the
operator and to the end
user in terms of data rate,
capacity, coverage,
energy efficiency,
connectivity and latency.
The book is divided into
three major parts with
each part containing four
to seven chapters: •
Critical enabling
technology • Multiservices
network • Deployment
scenarios The first part
discusses enabling
technologies, such as
green communication,
channel modeling,
massive and distributed
MIMO and ML-based
networks. In the second
part, different
methodologies and
standards for
multiservices have been
discussed. Exclusive
chapters have been
dedicated to each of the
open research challenges
such as multimedia
operating in 5G
environment, network
slicing optimization,
mobile edge computing,
mobile video
multicast/broadcast,
integrated satellite and
drone communication.
The third part paved the

way to deployment
scenarios for different
innovative services
including integration of a
multienergy system in
smart cities, intelligent
transportation systems,
5G connectivity in the
transport sector,
healthcare services, 5G
edge-based video
surveillance and
challenges of connectivity
for massive IoT in 5G and
beyond systems. The
book is written by experts
in the field who
introduced scientific and
engineering concepts,
covering the 5G
multimedia
communication areas. The
book can be read cover-
to-cover or selectively in
the areas of interest for
the readers. Generally,
the book is intended for
novel readers who could
benefit from
understanding general
concepts, practitioners
who seek guidance into
the field and senior-level
as well as graduate-level
engineering students in
understanding the
process of today's
wireless multimedia
communications.

Semiannual, with semiannual and annual indexes. References to all scientific and technical literature coming from DOE, its laboratories, energy centers, and contractors. Includes all works deriving from DOE, other related government-sponsored information, and foreign nonnuclear information. Arranged under 39 categories, e.g., Biomedical sciences, basic studies; Biomedical sciences, applied studies; Health and safety; and Fusion energy. Entry gives bibliographical information and abstract. Corporate, author, subject, report number indexes.

Administration Report of Irrigation Works in the Bombay Presidency, with Accounts and Statistical Statements CRC Press
This book discusses various artificial intelligence and machine learning applications concerning smart buildings. It includes how renewable energy sources are integrated into smart buildings using suitable power electronic devices. The deployment of advanced technologies with monitoring, protection, and energy management features is included, along with a case study on automation.

Overall, the focus is on architecture and related applications, such as power distribution, microgrids, photovoltaic systems, and renewable energy aspects. The chapters define smart building concepts and their related benefits.
FEATURES Discusses various aspects of the role of the Internet of things (IoT) and machine learning in smart buildings Explains pertinent system architecture and focuses on power generation and distribution Covers power-enabling technologies for smart cities Includes photovoltaic system-integrated smart buildings
This book is aimed at graduate students, researchers, and professionals in building systems engineering, architectural engineering, and electrical engineering.

Energy Research Abstracts

The book contains essays on current issues in Social and Political Sciences, such as the issues of governance and social order; social development and community development; global challenges and inequality;

civil society and social movement; IT-based community and social transformation; poverty alleviation and corporate social responsibility; and gender issues. Asia and the Pacific are the particular regions that the conference focuses on as they have become new centers of social and political development. Therefore, this book covers areas that have been traditionally known as the social and political areas such as communication studies, political studies, governance studies, criminology, sociology, social welfare, anthropology and international relations.
