**Norie's
Nautical
Tables** Imray
Laurie Norie &
Wilson
This famous
set of
mathematical
tables was
first published
in 1803. It has
been a
bestseller ever
since, and
despite
developments

in electronic
navigation it
remains an
essential
requirement
for anyone
learning and
practising
astro-
navigation.
Last updated
in 1994, the
editor, George
Blance, has
worked for
some time on
the
modernisation
of all the
tables for this

major new
edition. New
tables have
been included
and obsolete
ones deleted
to conform
with the
changing
techniques of
navigation,
with the aim
of improving
the accuracy
of the
calculated
position and
reducing the
tedium of the
calculation. All

the tables required for coastal and deep sea navigation are included. A simple uniform method of interpolation for all the trigonometrical tables is used. Certain tables and data are also included which are not readily available on board ship or are only used in the examination room. The section 'Seaports of the World' has also been extensively updated and restructured

with several hundred additional ports. The ports are listed geographically in the following order from Arctic Russia, Scandinavia, the Baltic Sea, the Atlantic coast of Europe, the Mediterranean Sea, West Africa, East Africa, Arabia, the Persian Gulf, the Indian sub-continent, the Far East, Australasia, the west coast of North and South America and finally the east coast of North and

South America. At the back of the section is an index of the seaports. *Norie's Nautical Tables* Imray, Laurie, Norie and Wilson Ltd "[A historical study that] breaks down the history of marine navigation in Canada into three broad categories of technology: shipboard navigation, charting, and shore-based navigational aids"--Page v. *Setting Course* Imray Norie's Nautical Tables is the

essential requirement for anyone learning and practicing astronavigation. Since J W Norie published the first edition of his Complete Set of Nautical Tables and Epitome of Practical Navigation in 1803, many changes to the tables have been necessary in both content and presentation. New tables have been included, obsolete ones deleted to conform with changing techniques of

navigation, with the aim of improving the accuracy of the calculated position and reducing the tedium of the calculation. Since the commissioning of the Global Navigation Satellite System (GNSS), its proven accuracy and reliability in all weather conditions have resulted in confidence and almost unquestioning dependence on its ability to provide a vessel's position, course and

speed. Its use is widespread but the marine environment is a hostile one and failure of electronic equipment or of the system itself is a possibility. No prudent seafarer would proceed on an ocean passage without a reliable navigational back-up. The Explanation is in the form of a detailed step-by-step description, by means of worked examples, of the different methods of

performing navigational calculations using a scientific calculator and/or the tables. A number of esteemed editors have worked on Nories' Nautical Tables over the years and this edition includes new contributions from François Hugo. This edition now presents formulae in an appropriate format for direct entry to a scientific calculator. Because the possibility of navigation

without even an appropriate calculator exists, the logarithms have been retained. • All the tables required for coastal and deep sea navigation are included • A simple uniform method of interpolation for all the trigonometric tables is used • Certain tables and data are also included which are not readily available on board ship or are only used in the examination room.
