Colorado Medicine Academic Press
Recent dramatic advances in diagnosis, as well as medical and surgical treatment, mean that you can offer your glaucoma patients more timely and effective interventions. This brand-new clinical reference delivers the comprehensive, expert guidance you need to make optimal use of these new approaches. online, in

print, and on video on DVD! Get in-depth guidance on all aspects of adult and pediatric glaucoma with one volume devoted to diagnosis and medical treatment, and another that focuses on surgical techniques. Presents world-class expertise through advice from leading specialists across six continents. Captures key diagnostic findings and operative procedures with 1,200 high-quality images and photographs-1,000 in full color-that highlight nuances of glaucoma presentation and treatment. Covers all aspects of adult and pediatric glaucoma in

Volume One, and the latest diagnostic imaging techniques including ultrasound biomicroscopy and optical coherence tomography. Guides you through the newest surgical techniques-such as trabeculectomy, gonio-surgery, combined surgeries, and implant procedures-in Volume Two. Features an entire section devoted to new horizons, including the latest in stem cell research, gene transfer, and implants. Allows quick reference thanks to a well-organized, user-friendly full-color layout. Provides access to the contents of the book online with

downloadable images, Gold Standard drug information, and more. Includes a DVD that features 25 diagnostic and surgical techniques being performed in real time on video. Your purchase entitles you to access the web site until the next edition is published, or until the current edition is no longer offered for sale by Elsevier, whichever occurs first. If the next edition is published less than one year after your purchase, you will be entitled to online access for one year from your date of purchase. Elsevier reserves the right to offer a suitable replacement product (such as a downloadable or CD-ROM-based electronic version) should online access to the web site be discontinued.

Hypermobility of Joints BoD – Books on Demand

This text presents a comprehensive evaluation of the recent and emerging imaging technologies for the clinical assessment of glaucoma. It should provide an understanding of the technology that is available and the results to expect from each method.

Selective COX-2 Inhibitors CRC Press

Oxidative stress and inflammation underpin most diseases; their mechanisms

are inextricably linked. For example, chronic inflammation is associated with oxidation, anti-inflammatory cascades are linked to decreased oxidation, increased oxidative stress triggers inflammation and redox balance inhibits the inflammatory cellular response. Whether or not oxidative stress and inflammation represent the causes or the consequences of cellular pathology, they contribute significantly to the pathogenesis of non-communicable diseases. The incidence of obesity and other related metabolic disturbances are rising, as are age-related diseases due to progressively aging populations. Interrelations between the mechanisms of oxidative stress and of inflammatory signaling and metabolism are, in the broad sense of energy transformation, being increasingly recognized as part of the problem in non-communicable diseases. The book *Oxidative Stress and Inflammation in Non-communicable Diseases: Molecular Mechanisms and Perspectives in Therapeutics* is an update on the latest research on the molecular basis of non-communicable diseases and the search for possible therapeutic alternatives. The

authors of this monograph are experts in their field and the book as a whole, provides an overview of the biochemical alterations underlying diseases such as cardiovascular disease, cancer, obesity, renal disease, neurological diseases and diabetes, emphasizing those aspects that they share in common. We hope that this book will be useful for researchers in biomedicine and also for physicians interested in finding the root causes of the disease, as well as for post-graduate students in biochemistry, molecular biology, nutrition or medicine.

Practical Management BoD – Books on Demand

The mainstay of therapy for rheumatoid disease is the non-steroid antiinflammatory drugs (NSAIDs), despite their inherent gastrointestinal toxicity and ability to cause renal damage in susceptible patients. The theory that the beneficial and toxic effects of NSAIDs stem from a reduction in prostanoid production through inhibition of cyclooxygenase implied that particular toxicities were inevitable with NSAIDs and would always be correlated with efficacy. However, over the years, it became apparent that at

therapeutic doses, some NSAIDs had greater toxic side-effects than others, a fact not explained by the general theory. A significant clarification arose from the discovery that there are two distinct isoforms of COX, a constitutive enzyme (COX-I) responsible for the production of prostanooids necessary for platelet aggregation and protection of the gastric mucosa and kidney; and an inducible enzyme (COX-2) that is newly synthesized at sites of tissue damage and produces prostaglandins that manifest pathological effects. It became clear that different NSAIDs had greater or lesser effects on COX-I when used in therapeutic doses, explaining the variation in side-effects. The elucidation of the crystal structure of these different enzymes and the skills of medicinal chemists have led to the synthesis of new chemicals with a selectivity for the inducible enzyme, and thus with therapeutic efficacy without those toxic effects resulting from inhibition of the constitutive enzyme. *Frontiers in Cardiovascular Drug Discovery* Springer Science & Business Media

Essential hypertension is a quantitative characteristic that is important for

correlating with the rate of morbidity and mortality in the developed and developing countries. The etiology of essential hypertension is complex. This work, authored by renowned researchers in the field, gives updated concepts about essential hypertension. Novel advanced topics are presented in a sole document as hypertension in children; the contribution in the psychiatric comorbidities associated with it; mechanisms of omega-3 in protection against hypertension-related organ damage; oxidative stress at different levels; genetics-associated studies; the role of pollution in essential hypertension; personalized healthcare in a hypertensive patient; and hypertension-related disparities between ethnic groups. It can be concluded so that essential hypertension is one of the hottest topics in contemporary medicine.

Update on Essential Hypertension

Springer Science & Business Media

Frontiers in Nanomedicine offers an up-to-date understanding of nanomaterials to readers having clinical or biomolecular research interests. Scientists, both aspiring and experienced, will find, in each volume, a comprehensive overview of

current molecular strategies for using nanoscale materials in medicine. This volume explains the use of nanotechnology in medicine to improve the diagnosis of disease and the role of nanoparticles in targeted drug delivery systems for theranostic applications. This volume also covers the applications of nanoparticles in breast cancer research, liver disease therapy and Alzheimer's disease treatment.

Oxidative Stress and Inflammation in Non-communicable Diseases - Molecular Mechanisms and Perspectives in Therapeutics Springer Science & Business Media

A decade after the publication of *The Man Behind the Syndrome*, which was warmly received, particularly by medical geneticists, syndromologists and those doctors from many different disciplines with an interest in medical history, Peter and Greta Beighton now present the second volume of their work, promised ten years ago. The length of time which has passed since the publication of the first book gives an inkling of the extraordinary effort involved on the part of the authors in collecting the necessary biographical

data and the portraits of their subjects. The Person Behind the Syndrome conforms exactly in structure, quality and size with the first volume, thus facilitating the use of the series. Again we find detailed presentations of a hundred people who have given their names to disorders or syndromes which are thought to have a significant genetic or chromosomal component (with a photograph or portrait, biography, commentary on the development of nomenclature and references). The reader finds information not only on the doctor and/or scientist under discussion, but also, as in the previous volume, on the person behind the name. This is followed by brief, unillustrated biographies of about seventy, mostly younger and, in some cases, still professionally active personalities.

LACMA Physician Springer Science & Business Media

Frontiers in Cardiovascular Drug Discovery is an eBook series devoted to publishing the latest advances in cardiovascular drug design and discovery. Each volume brings reviews on the biochemistry, in-silico drug design, combinatorial chemistry, high-

throughput screening, drug targets, recent important patents, and structure-activity relationships of molecules used in cardiovascular therapy. The eBook series should prove to be of great interest to all medicinal chemists and pharmaceutical scientists involved in preclinical and clinical research in cardiology. The third volume of the series covers the following topics: - P2Y12 receptor agonists -Heart failure pharmacotherapy -Vasopressin and the cardiovascular system -Cerebral small vessel disease -Complement blocking therapeutic strategies -New antiplatelet and anticoagulating agents for gastrointestinal treatments Handbook of Headache Unqualified Doctors Performing Cosmetic SurgeryPolicies and Enforcement Activities of the Federal Trade Commission : Hearing Before the Subcommittee on Regulation, Business Opportunities, and Energy of the Committee on Small Business, House of Representatives, One Hundred First Congress, First SessionColorado MedicineNational Academy of Sciences' Study Entitled "Health Care for American Veterans": July 19, 1977La literatura venezolana y su historiapresencia de

Joint hypermobility, joint laxity or "double-jointedness" is no longer regarded as just a quaint clinical entity, but has gained recognition as a feature common to a heterogeneous group of generalized hereditary connective tissue disorders. This monograph examines the scientific basis, clinical features and treatment of this syndrome. The second edition has been thoroughly updated, with new contributions to cover in depth three areas in which new scientific advances have been made: biochemistry, genetics, and biomechanics. The case histories make fascinating reading, and the comprehensive coverage of the rarer hereditary disorders provides a valuable reference. From the reviews of the first edition: "This little book deals with a somewhat neglected subject and will prove useful in a number of ways." British Journal of Plastic Surgery #1 "This is a delightful book full of stimulating ideas, by three authors who have pooled their thoughts and the results of their studies."

Journal of the Royal Society of Medicine #2
Lacrimal Gland, Tear Film, and Dry Eye Syndromes Bentham Science Publishers

As in many areas of medicine, treatment of viral hepatitis has seen an acceleration of change driven by new therapies and evolving technology. Thanks to the direct-acting antiviral agents (DAAs), the era of HCV eradication and cure has begun. As regards to hepatitis B therapy, potent antiviral drugs for suppression of viral replication are available, new research activities to enhance eradication are visible, and these may influence clinical practice in the coming years. This book covers the latest advances in hepatitis C and hepatitis B therapeutics as well as the emerging and investigational treatment strategies. "Advances in Treatment of Hepatitis C and Hepatitis B" book is an up-to-date source of information for physicians, residents, and advanced medical students seeking a broader understanding of treatment of viral hepatitis. The authors of the chapters come from many eminent centers around the world and are experts in their respective fields.

Nurse Writers of the Great War Slack Incorporated
 Much confusion exists in the accurate identification and classification of the many disorders in infancy which affect the skeleton by producing sclerosing lesions throughout the entire skeleton or in selected areas. A scholarly effort to bring order into this confusing field must be welcomed. Professors Beighton and Cremin have skillfully defined the problem and concisely yet thoroughly have identified the various sclerosing dysplasias. They bring to this task a wealth of clinical experience in their many years in the Departments of Radiology at the University of Cape Town Medical School and the Groote Schuur and Red Cross Children's Hospitals in Cape Town, South Africa. The authors also have had available data from the University of Cape Town Skeletal Dysplasia Registry. Professors Beighton and Cremin have used as a basis for their treatise the Paris Nomenclature (the modified version of 1977). This monograph is a felicitous combination of a working atlas and a scholarly exposition of the various sclerosing bone dysplasias, considering in

detail eighteen major entities adopted from the Paris classification. Other disorders which present with osteosclerosis are also described. These include Caffey disease, oculodentosseous dysplasia, central osteosclerosis with bamboo hair, fluorosis, osteosclerosis associated with renal disease and mastocytosis.

 Supersedes the 1993 revision (ISBN 9290360569).

A Handbook for Mental Health Professionals Elsevier Health Sciences
 Physician-Assisted Death is the eleventh volume of Biomedical Ethics Reviews. We, the editors, are pleased with the response to the series over the years and, as a result, are happy to continue into a second decade with the same general purpose and zeal. As in the past, contributors to projected volumes have been asked to summarize the nature of the literature, the prevailing attitudes and arguments, and then to advance the discussion in some way by staking out and arguing forcefully for some basic position on the topic

targeted for discussion. For the present volume on Physician-Assisted Death, we felt it wise to enlist the services of a guest editor, Dr. Gregg A. Kasting, a practicing physician with extensive clinical knowledge of the various problems and issues encountered in discussing physician assisted death. Dr. Kasting is also our student and just completing a graduate degree in philosophy with a specialty in biomedical ethics here at Georgia State University. Apart from a keen interest in the topic, Dr. Kasting has published good work in the area and has, in our opinion, done an excellent job in taking on the lion's share of editing this well-balanced and probing set of essays. We hope you will agree that this volume significantly advances the level of discussion on physician-assisted euthanasia.

Incidentally, we wish to note that the essays in this volume were all finished and committed to press by January 1993.

Advances in Treatment of Hepatitis C and B Springer Science & Business Media

This electronic version has been made available under a Creative Commons (BY-NC-ND) open access license. The First World War was the first 'total war'. Its

industrial weaponry damaged millions of men and drove whole armies underground into dangerously unhealthy trenches. Many were killed. Many more suffered terrible, life-threatening injuries: wound infections such as gas gangrene and tetanus, exposure to extremes of temperature, emotional trauma and systemic disease. In an effort to alleviate this suffering, tens of thousands of women volunteered to serve as nurses. Of these, some were experienced professionals, while others had undergone only minimal training. But regardless of their preparation, they would all gain a unique understanding of the conditions of industrial warfare. Until recently their contributions, both to the saving of lives and to our understanding of warfare, have remained largely hidden from view. By combining biographical research with textual analysis, Nurse writers of the great war opens a window onto their insights into the nature of nursing and the impact of warfare.

Extensively revised and updated to reflect the current state of knowledge in the study of aging, this Fourth Edition offers a complete profile of the aging process at all levels, from molecules and cells to demography and evolution. Written by international experts in current basic and clinical aging research, this text includes aspects of individu

Biotargets of Cancer in Current Clinical Practice Springer

Biological cell membranes regulate the transfer of matter and information between the intracellular and extracellular compartments as basic survival and maintenance functions for an organism. This volume contains a series of reviews that are concerned with how epithelial plasma membranes regulate the transport of solutes between the intracellular and extracellular compartments of a cell. This book is also an attempt to analyze the molecular basis for the movement of various solutes across an epithelial cell membrane. This volume is devoted to a diversity of epithelial transport mechanisms in representative cell membranes of a variety of living things. The first section of the book (Chapters 1-6) focuses on mechanisms of solute transport in epithelia of invertebrates. The last section which comprises ten chapters (Chapters 7-16) deals with solute transporters in epithelial cell membranes of vertebrates. It is hoped that with this particular ordering the reader can glean a telescopic view of the evolutionary history of the various epithelial solute

transporters.

Expert Consult Premium Edition - Enhanced Online Features, Print, and DVD, 2-Volume Set Springer Science & Business Media

Over the past fifty years, advanced techniques and strategies have arisen in the field of myocardial protection. Meticulous trials, focusing on pulmonary protection during heart surgery requiring cardiopulmonary bypass (CPB), have been missing. This textbook is intended to serve as a useful tool to spread information on strategies for lung protection during heart surgery with CPB. Emphasis on pulmonary protection will be turned to lung perfusion as an adjunct for minimizing the deleterious effects of pulmonary ischemia-reperfusion injury in heart surgery. Many renowned authors have contributed by presenting their experience on lung perfusion in basic research and clinical trials. Furthermore, they have enlightened the quality of this textbook with new ideas, concepts, and future perspectives. The scope of this textbook is of interest to different professionals, such as cardiovascular surgeons, pulmonary surgeons, transplantation physicians, cardiothoracic

anesthesiologists, intensive care physicians, cardiothoracic fellows, radiologists, basic sciences physicians, cardiologists, pulmonary medicine physicians, perfusionists, nurses, students, and researchers. This textbook has 7 sections, aimed at addressing general and specific aspects of pulmonary protection during heart surgery with CPB. The first section on general concepts provides information about anatomic, physiologic, histologic, molecular, and radiologic considerations regarding the lungs. The second section focuses on ischemia-reperfusion injury and is composed of several interesting chapters, addressing the basic science aspects of pulmonary protection, as well as experimental and clinical experiences from different heart surgery centers worldwide.

World Health Organization

"The development of community methods of treatment implies the wider application of the social sciences, mainly sociology and anthropology, to existing psychiatric practice. War-time needs with the huge volume of psychiatric cases and relative shortage of psychiatrists gave a

tremendous stimulus to social methods of treatment in psychiatry; but probably more important is the changing cultural pattern in Britain. It appears to us that, in this country at least, the community is today assuming social responsibilities which would not have been contemplated a generation ago. This growth of a social conscience goes much deeper than the political changes which have occurred

during recent years, although these are themselves a manifestation of social change. This book is a report on the work of a unit which was organized to study and develop community methods of treatment. Many different factors led to its inception. The inquiry really started ten years ago when a trend towards group treatment and studies of the patient community appeared in British psychiatry; these trends were developed by Army

psychiatrists and psychologists and by the Emergency Medical Service of the Ministry of Health; the experiments at Mill Hill and Dartford (both Ministry of Health hospitals) which are briefly described in this book, were forerunners of the present Industrial Neurosis Unit at Belmont Hospital which was started in April 1947"--Introduction.
