OUTLINE

This manual has been designed and written with the purpose of introducing key concepts and areas of debate around the "creative economy", a valuable development opportunity that Latin America, the Caribbean and the world at large cannot afford to miss. The creative economy, which we call the "Orange Economy" in this book (you'll see why), encompasses the immense wealth of talent, intellectual property, interconnectedness, and, of course, cultural heritage of the Latin American and Caribbean region (and indeed, every region). At the end of this manual, you

will have the knowledge base necessary to understand and explain what the Orange Economy is and why it is so important. You will also acquire the analytical tools needed to take better advantage of opportunities across the arts, heritage, media, and creative services.

The Orange Economy Executive Office
of the President

The author argues that Margaret Thatcher's free-market arguments highlighted the economic shortcomings of Keynesianism and socialism and paved the way for a significant realignment of the Conservative Party and re-thinking of British economics.

Global Economic Prospects, June 2021 Edward Elgar Publishing

The second edition of the Impact Evaluation in Practice handbook is a comprehensive and accessible introduction to impact evaluation for policy makers and development practitioners. First published in 2011, it has been used widely across the development and academic communities. The book incorporates real-world examples to present practical guidelines for designing and

implementing impact evaluations. Readers will gain an understanding of impact evaluations and the best ways to use them to design evidence-based policies and programs. The updated version covers the newest techniques for evaluating programs and includes state-of-the-art implementation advice, as well as an expanded set of examples and case studies that draw on recent development challenges. It also includes new material on research ethics and partnerships to conduct impact evaluation. The handbook is divided into four sections: Part One discusses what to evaluate and why; Part Two presents the main impact evaluation methods; Part Three addresses how to manage impact evaluations; Part Four reviews impact evaluation sampling and data collection.

Case studies illustrate different applications of impact evaluations. The book links to complementary instructional material available online, including an applied case as well as questions and answers. The updated second edition will be a valuable resource for the international development community, universities, and policy makers looking to build better evidence around what works in development.

The Federal Budget as an Economic Document IGI Global

This book is a second, revised edition of the original 1986 publication. Since then, the issue of contract change has increasingly challenged the business community and legal practitioners. The world-wide recession may well have

accelerated the need to secure contractual relationships by reasonable flexibility. Successful foreign investment, a relentless challenge, is subject to many unpredictable errors. Of all these variables, however, successful investment is most dependent on the investor-host country relationship, which is the object of the present study. In particular, the pressure by host countries for contract change and its counterpart: the investor's defence of contract stability. The book is essentially a reference handbook for legal practitioners. It analyzes a variety of increasingly important questions concerning international investment agreements that come under pressure for change by one of the contracting parties: either a transnational

corporation or a host country government. The seven case studies and the analytical chapters which follow are based on the author's research and the assistance of corporate and government officials, experts from the United Nations and other organizations, and members of academic research institutes.

Economic forces underlie and explain much biodiversity degradation and loss, and economic instruments provide a useful set of tools for strengthening biodiversity conservation, sustainable use and equitable benefit sharing. If National Biodiversity Strategies and Action Plans are to be effective they

must be justifiable in economic terms. This document reports on a project reviewing the use of economic measures in NBSAPs, It brings together the component activities of the economics review, and summarizes and synthesizes this information to provide guidance on experiences, lessons learned and ways forward in the use of economic measures.

International Handbook on the Economics of Integration: General issues and regional groups University of Chicago Press

International Handbook of Economic Integration edited by Miroslav Jovanovi provides timely and rich academic contributions to considerations of the widest array of integration-related issues. European integration has been providing an inspiration to a number of academics and researchers. The Handbook is a recognition of the

dynamic and strong solidarity of the European integration. At the same time, the European Union often provided an example for integration schemes throughout the world which spread enormously since the mid-1990s. Leading experts from all continents contributed to this Handbook which will be a valuable input into academic and policy-making discussions and actions. José Manuel Barroso, President of the European Commission Miroslav Jovanovi s publication represents a rich contribution to the complex issue of regional integration, its benefits, its shortcomings, and its relationship with multilateral trade opening. It sheds light over an issue which is the subject of intense discussions in trade circles. Pascal Lamy, Director-General of the

WTO Much has been written on trade agreements as a mechanism to integrate the markets of two or more countries often inspired by the European example. In recent years, attention has increasingly focused on the importance of economic geography as a determinant of industrial location. This book combines the two strands of analysis, bringing together leading experts in the fields of economic geography and international trade. The result is an outstanding compilation of papers that illuminate how policies and economic forces affect the location of economic activity in an integrated Europe. Bernard Hoekman, Director, The World Bank, US

The open multilateral trading system is a tremendous success of the past half century, and has contributed greatly to

the world's unprecedented rate of economic growth. Over the past two decades however, preferential trading arrangements have proliferated, raising questions as to how compatible they are with the open multilateral system, and what policies might be adopted to improve outcomes. The essays in this volume detail the emergence of PTAS and provide comprehensive and up-to-date analyses of the state of play of preferential arrangements in all regions of the world. The volume will provide a useful reference for all those wanting to understand existing preferential arrangements and their role in the international economy today. Anne O. Krueger, Johns Hopkins University and Stanford University, US

Economic integration is a complex and

multifaceted giant, with a myriad aspects ranging from regional and global concentration and dispersal of economic activity to social and political consequences for individuals and communities in developed and developing countries alike. This landmark, three volume collection of chapters by leading authors, drawn from many fields, is a worthy and timely contribution to the analysis of a phenomenon with profound implications for the future world economy - and its governance. James Zhan, Director, Investment & Enterprise Division, UNCTAD With this Handbook, Miroslav Jovanovi has provided readers with both an excellent stand-alone original reference book as well as the first volume in a comprehensive three-

volume set. This introduction into a rich and expanding academic and practical world of international economic integration also provides a theoretical and analytical framework to the reader, presenting select analytical studies and encouraging further research. International Handbook on the Economics of Integration, Volume I covers two broad themes: general integration issues and regional integration groups. The first part discusses topics that range from an overview of the regional integration deals registered with the World Trade Organization, to multilateralism and regionalism, hub-and-spoke integration networks, limits to integration, rules of origin, and globalization. The second part of the Han

Why has an economy that has done so many things right failed to grow fast? Under-Rewarded Efforts traces Mexico's disappointing growth to flawed microeconomic policies that have suppressed productivity growth and nullified the expected benefits of the country's reform efforts. Fast growth will not occur doing more of the same or focusing on issues that may be key bottlenecks to productivity growth elsewhere, but not in Mexico. It will only result from inclusive institutions that effectively protect workers against risks, redistribute towards those in need, and simultaneously align entrepreneurs' and workers' incentives to raise productivity.

The Protection of Economic, Social and Cultural Rights in Africa Routledge

The Economics of Ecosystems and Biodiversity (TEEB) study is a major international initiative drawing attention to local, national and global economic benefits of biodiversity, to highlight the growing costs of biodiversity loss and ecosystem degradation, the benefits of investing in natural capital, and to draw together expertise from the fields of science, economics and policy to enable practical actions. Drawing on a team of more than one hundred authors and reviewers, this book demonstrates the value of ecosystems and biodiversity to the economy, society and individuals. It underlines the urgency of strategic

policy making and action at national and international levels, and presents a rich evidence base of policies and instruments in use around the world and a wide range of innovative solutions. It highlights the need for new public policy to reflect the appreciation that public goods and social benefits are often overlooked and that we need a transition to decision making which integrates the many values of nature across policy sectors. It explores the range of instruments to reward those offering ecosystem service benefits, such as water provision and climate regulation. It looks at fiscal and regulatory instruments to reduce the incentives of those running down our natural capital, and at reforming subsidies such that they respond to current and future

priorities. The authors also consider two major areas of investment in natural capital - protected areas and investment in restoration. Overall the book underlines the needs and ways to transform our approach to natural capital, and demonstrates how we can

practically take into account the value of ecosystems and biodiversity in policy decisions - at national and international levels - to promote the protection of our environment and contribute to a sustainable economy and to the wellbeing of societies.
