 Working with teams, leading teams and being a member of a team is part of everyday working life for most of us. Through the lens of a team coaching case study, this book considers the development journey of a team and system influences over a three-year period. Readers are invited to walk in the shoes of the team, the team leader, the organisation, the team coach and the coach's supervision and support networks, providing a unique insight into team coaching and development that goes beyond the traditional focus on the coach's perspective. Helen Zink uses her considerable experience as a leadership and team growth coach, and leader to illustrate how team coaching interventions can be combined with other disciplines such as positive psychology, change management and strategic implementation in effective ways. The book takes a pracademic approach, showing how theories, models and best practice are applied to a real case and highlighting both the successes and challenges experienced to offer an example for all those involved in team, leadership and organisational development. With it widely recognised that collective leadership and teamwork is needed to deal with the rapidly changing environment organisations find themselves in, this is a timely and important resource for coaches, team coaches, coach supervisors, team leaders, team members, organisational development specialists, change managers,

academics and consultants.

 A current trend in digital design—the integration of the MATLAB® components Simulink® and Stateflow® for model building, simulations, system testing, and fault detection—allows for better control over the design flow process and, ultimately, for better system results. Digital Integrated Circuits: Design-for-Test Using Simulink® and Stateflow® illustrates the construction of Simulink models for digital project test benches in certain design-for-test fields. The first two chapters of the book describe the major tools used for design-for-test. The author explains the process of Simulink model building, presents the main library blocks of Simulink, and examines the development of finite-state machine modeling using Stateflow diagrams. Subsequent chapters provide examples of Simulink modeling and simulation for the latest design-for-test fields, including combinational and sequential circuits, controllability, and observability; deterministic algorithms; digital circuit dynamics; timing verification; built-in self-test (BIST) architecture; scan cell operations; and functional and diagnostic testing. The book also discusses the automatic test pattern generation (ATPG) process, the logical determinant theory, and joint test action group (JTAG) interface models. Digital Integrated Circuits explores the possibilities of MATLAB's tools in the development of application-specific integrated circuit (ASIC) design systems. The book shows how to incorporate Simulink and Stateflow into the process of modern digital design.

While there is growing interest in IFRS within the US, interest outside the US has exploded. Weygandt's fourth edition of Financial Accounting: IFRS highlights the integration of more US GAAP rules, a desired feature as more foreign companies find the United States to be their largest market. The highly anticipated new edition retains each of the key features (e.g. TOC, writing style, pedagogy, robust EOC) on which users of Weygandt Financial have come to rely, while putting the focus on international companies/examples, discussing financial accounting principles and procedures within the context of IFRS, and providing EOC exercises and problems that present students with foreign currency examples instead of solely U.S. dollars.

 From every angle, the world has faced unprecedented change over the past two years. Academics will be dissecting the nuance of the COVID-19 Crisis for decades to come. Yet, for all the promises of research and data, we must understand that the full impact of the pandemic — from child development and college football seasons to healthcare breakthroughs and the future of the film industry — will not be known for at least a generation. This book focuses on the business lessons we have learned since the pandemic began in early 2020. It takes an interdisciplinary approach to examining the effects of COVID-19 on multiple aspects of business, such as marketing and finance. At the same time, it stresses the need to consider the human element of business above all else, showing that people are the most important piece of what has become a devastating and unpredictable puzzle.

EBOOK: Financial Accounting (GE), 8e World Scientific
 2020 Book Excellence Award Winner How any leader can deliver business-changing innovation now. Any leader in any size company, no matter the size or sector, feels the pressure to innovate, find new ideas and business models, and create enduring customer value. There is no one formula or set process to find and execute the ideas that achieve these goals; customers set moving targets, shareholders are unforgiving and demanding, and society expects companies to care about much more than the bottom line. The fast and furious forces of change stimulated by technology, demographics, lifestyles, and economic, environmental, political and regulatory impacts -- or any number of these in combination - are easy to see. They are easy to talk about. They are easy to intellectualize. The problem? The answers are hard to execute and require nuanced combinations of leadership, skills, strategy and tactics. On top of that, innovation has moved from an abstraction that will matter at some distant date to a front-and-center deliverable that must show evidence of impact in the space of the calendar quarter. In the stories, tools, techniques and advice inside The Change Maker's Playbook,

leaders will find tangible steps to find and safeguard the plans that will deliver the sustainable business-changing impacts – new customers, new relationships, new sources of value and growth—their businesses need. Separated from the pack of academic and consultant innovation theories, Radin's approach stems from her own experience sitting in the innovation hot seat at some of the world's most demanding companies and is bolstered by interviews with 50 corporate executives, founders and startup investors representing media, e-commerce, payments, healthcare, government, professional services, and not-for-profit sectors. The book walks readers through Radin's adaptive, 9-part framework, engaging them in ready-to-apply techniques. Her work shows leaders how to find the big ideas that will meaningfully address customer needs, take the insight from idea through implementation in a way that delivers in the short and long-term for the organization, and lead effectively through the obstacles that tend to derail or diminish innovation. Three phases – Seeking, Seeding and Scaling – organize the framework within an intuitive, logical and useable format, with concrete actions outlined every step of the way. The answer to the dilemma every business faces today is that innovation is exhilarating, rewarding and even fun when it is approached as a unique challenge, but it can also be polarizing, unpredictable, and scary. Success requires that leaders rethink how they lead innovation. Leaders know they must set aside preconceived notions of what works, and look to those who have already walked in their shoes. This is why *The Change Maker's Playbook* was written, and why it will become an ongoing resource for any innovation leader.
