Theory of Polymers and Soft matter Soft Matter Tu E Theory of Polymers and Soft Matter Soft Matter Physics at TU/e. Home; Welcome to TPS Soft Matter Physics at TU/e Applied Physics at TU/e, Fluids, Bio and Soft Matter Society faces significant challenges in the future and will only be able to overcome them through the right combination of fundamental research, applied science and meaningful minds. TU/e's Department of Applied Physics is organised around 3 disciplines: Fluids, Bio and Soft Matter Applied Physics at TU/e, Fluids, Bio and Soft Matter Theory of Polymers and Soft matter Enabling a sustainable, functional and resource-efficient next generation of materials by uncovering the physical mechanisms underlying the behavior of soft and biological matter. Theory of Polymers and Soft matter My research focus on "Functional Soft Matter" and it encompasses fundamentals and application aspects. Mainly working with gels and self-assembled molecules, I make use of micro fabrication, microfluidics and 3D printing techniques to formulate new responsive / functional / soft materials. Eduardo MENDES ASSOCIATE PROFESSOR In this course students learn the foundations underlying the behavior of soft matter and fundamental knowledge is then related to advanced products from sensing, coatings, to bio-medical and health care materials as well as materials for energy such as fuel cell membranes. EDUCATION - TU Delft Soft matter or soft condensed matter is a subfield of condensed matter comprising a variety of physical systems that are deformed or structurally altered by thermal or mechanical stress of the magnitude of thermal fluctuations. Soft matter - Wikipedia Soft Matter provides a unique forum for the communication of fundamental science underpinning the behaviour of soft matter. There is a particular focus on the interface between physics, materials science, biology, chemical engineering and chemistry. The scope of Soft Matter covers the following. Soft Matter - rsc.org Our group research focuses on Mechanics and Physics of Soft Materials. Our current projects include active materials, instabilities, 3D-printing; bioinspired materials; acoustic metamaterials and wave propagation in soft matter, in general; new actuation mechanisms for soft robotics, failure mechanisms in composite materials.
