Journeying backward in time—from 1950 to 1926—this masterpiece of women’s literary fiction presents an indelible portrait of a marriage Forty-three-year-old Antonia Fleming is preparing a dinner party for eight at the house in Campden Hill Square she shares with her husband, Conrad. The occasion is the engagement of their son, Julian. Their other child, Deirdre, hates her father and resents her mother—a reality Conrad ponders, along with the disastrous state of Deirdre’s single life, as he leaves the bed of his current mistress. In illuminating the quotidian details of domestic life, The Long View perfectly captures a long relationship, with its moments of joy and intimacy, loneliness and regret, and of the roads not taken. As the story

moves backward in time, we learn about the events that led up to Conrad and Antonia’s fateful first meeting—including a startling secret in Antonia’s past. With brilliant use of reverse chronology, the bestselling author of the Cazalet Chronicles paints a realistic and revealing portrait of a marriage and the decisions, good and bad, right and wrong, that shape lives.

Employee selection has long stood at the practical forefront of industrial/organizational psychology. Today's social, business, and economic climates require ongoing adaptations by those who select organizations' personnel, and research on the topic helps gauge the impact of these adaptations and their implications for human performance and potential. The Oxford Handbook of Personnel Assessment and Selection codifies the wealth of new research surrounding employee selection (web-based assessments, social networking, globalization of organizations), situating them alongside more traditional practices to establish the best and most relevant research for both professionals and academics. Comprising chapters from authors in both the private sector and academia, this volume is organized into seven parts: (1) historical and social context of the field of assessment and selection; (2) research strategies; (3) individual difference constructs that underlie effective performance; (4) measures of predictor constructs; (5) employee performance and outcome assessment; (6) societal and organizational constraints on selection practice; and (7) implementation and sustainability of selection systems. While providing a comprehensive review of current research and practice, the purpose of this handbook is to provide an up-to-date profile of each of the areas addressed and highlight current questions that deserve additional attention from researchers and practitioners. This

compendium is essential reading for industrial/organizational psychologists and human resource managers.

**The Business Analyst's Handbook** John Wiley & Sons

This book is for executives and practitioners tasked with the movement of data from old systems to a new repository. It uses a series of steps developed in real life situations that will get the reader from an empty new system to one that is working and backed by the user population. Recent figures suggest that nearly 40% of Data Migration projects are over time, over budget or fail entirely. Using this proven methodology will vastly increase the chances of achieving a successful migration.

Chasing the Rising Sun is the story of an American musical journey told by a prize-winning writer who traced one song in its many incarnations as it was carried across the world by some of the most famous singers of the twentieth century. Most people know the song "House of the Rising Sun" as 1960s rock by the British Invasion group the Animals, a ballad about a place in New Orleans -- a warehouse or a prison or gambling joint that's been the ruin of many poor girls or boys. Bob Dylan did a version and Frijid Pink cut a hard-rocking rendition. But that barely scratches the surface; few songs have traveled a journey as intricate as "House of the Rising Sun." The rise of the song in this country and the launch of its world travels can be traced to Georgia Turner, a poor, sixteen-year-old daughter of a miner living in Middlesboro, Kentucky, in 1937 when the young folk-music collector Alan Lomax, on a trip collecting field recordings, captured her voice singing "The Rising Sun Blues." Lomax deposited the song in the Library of Congress and included it in the 1941 book *Our Singing Country*. In short order, Woody Guthrie, Pete Seeger, Lead Belly, and Josh White learned the song and each recorded it. From there it began to move to the planet's farthest corners. Today, hundreds of artists have recorded "House of the Rising Sun," and it can be heard in the most diverse of places -- Chinese karaoke bars, Gatorade ads, and as a ring tone on cell phones. Anthony

began his search in New Orleans, where he met Eric Burdon of the Animals. He traveled to the Appalachians -- to eastern Kentucky, eastern Tennessee, and western North Carolina -- to scour the mountains for the song's beginnings. He found Homer Callahan, who learned it in the mountains during a corn shucking; he discovered connections to Clarence "Tom" Ashley, who traveled as a performer in a 1920s medicine show. He went to Daisy, Kentucky, to visit the family of the late high-lonesome singer Roscoe Holcomb, and finally back to Bourbon Street to see if there really was a House of the Rising Sun. He interviewed scores of singers who performed the song. Through his own journey he discovered how American traditions survived and prospered -- and how a piece of culture moves through the modern world, propelled by technology and globalization and recorded sound.

"This book is not only of practical value. It's also a lot of fun to read." Michael Jackson, The Open University. Do you need to know how to create good requirements? Discovering Requirements offers a set of simple, robust, and effective cognitive tools for building requirements. Using worked examples throughout the text, it shows you how to develop an understanding of any problem, leading to questions such as: What are you trying to achieve? Who is involved, and how? What do those people want? Do they agree? How do you envisage this working? What could go wrong? Why are you making these decisions? What are you assuming? The established author team of Ian Alexander and Ljerka Beus-Dukic answer these and related questions, using a set of complementary techniques, including stakeholder analysis, goal modelling, context modelling, storytelling and scenario modelling, identifying risks and threats, describing rationales, defining terms in a project dictionary, and prioritizing. This easy to read guide is full of carefully-checked tips and tricks. Illustrated with worked examples, checklists, summaries, keywords and exercises, this book will encourage you to move closer to the real problems you're trying to solve. Guest boxes from other experts give you additional hints for your projects. Invaluable for anyone specifying requirements including IT practitioners, engineers, developers, business analysts, test engineers, configuration managers, quality engineers and project managers. A practical sourcebook for lecturers as well as students studying software engineering who want to learn about requirements work in industry. Once you've read this book you will be ready to create good requirements!

The Standard for Business Analysis - First Edition is a new PMI foundational standard, developed as a basis for business analysis for portfolio, program, and project management. This standard illustrates how project management processes and business analysis processes are complementary activities, where the primary focus of project management processes is the project and the primary focus of business analysis processes is the product. This is a process-based standard, aligned with A Guide to the Project Management Body of Knowledge (PMBOK® Guide) - Sixth Edition, and to be used as a standard framework contributing to the business analysis body of knowledge.
