Scholars Dental Education specializes in online courses that prepare dentists from all over the world for the Canadian dental board exams, helping them become licensed in Canada. Scholars Dental has been providing NDEB AFK prep courses for many years with successful results and excellent reviews. Their innovative online platform includes live seminars, experienced instructors, recorded lectures, online quizzes, online mock exams, and a new way of learning and understanding dentistry all together. This course has a unique Basic Science section which is a must for all dentists taking a dental board exam such as NDEB and INBDE exams. The Scholars Dental team believes that all dentists should have the opportunity to learn basic sciences in a way specifically designed for dental students. Basic sciences, if taught properly, builds the foundation that would simplify complicated subjects such as pharmacology and pathology, which are usually major obstacles in passing dental board exams. Dr. Ahmad Hafez successfully passed the NDEB AFK exam with a score of 91 on his first attempt and passed the ACJ & ACS NDEB exams of that same year on his first attempt. Dr. Hafez was also accepted to the IDAPP program at the University of Toronto. He went on passing the written board exams and OSCE exams and received his license in early 2014. He is a member of the Royal College of Dental Surgeons of Ontario, American Academy of Implant Dentistry and has received his Fellowship Certificate from the Oral Surgery Academy for General Dentists. Dr. Hafez started teaching AFK lectures in 2013 with amazing feedback from students. Dr. Hafez's main strength is his ability to break down complicated

concepts and then teach it in a simple way. His understanding of the obstacles a foreign trained dentist must overcome to pass the AFK exam is a great benefit to all of his students. Dr. Hafez has been working as a licensed dentist in Canada since January 2014, with experience in private practice and community health centers. Dr. Hafez continues to be a student of dentistry, and has taken multiple continuing education courses in fields of sedation, oral surgery, occlusion, periodontics, cosmetic dentistry and implantology.

The book aims to provide both comprehensive reviews of the classical methods and an introduction to new developments in medical statistics. The topics range from meta analysis, clinical trial design, causal inference, personalized medicine to machine learning and next generation sequence analysis. Since the publication of the first edition, there have been tremendous advances in biostatistics and bioinformatics. The new edition tries to cover as many important emerging areas and reflect as much progress as possible. Many distinguished scholars, who greatly advanced their research areas in statistical methodology as well as practical applications, also have revised several chapters with relevant updates and written new ones from scratch. The new edition has been divided into four sections, including, Statistical Methods in Medicine and Epidemiology, Statistical Methods in Clinical Trials, Statistical Genetics, and General Methods. To reflect the rise of modern statistical genetics as one of the most fertile research areas since the publication of the first edition, the brand new section on Statistical Genetics includes entirely new chapters reflecting the state of the art in the field. Although tightly related, all the book chapters are self-contained and can be read independently. The book chapters intend to provide a convenient launch pad for readers interested in learning a specific topic, applying the related statistical methods in their scientific research and seeking the newest references for in-depth research.
