Casebook on benefit and harm Göttingen University Press
 Stefan Borzillo examines a large variety of CoPs by means of six success factors and identifies three basic types: innovating strategic, operational excellence, and social and productive space CoPs. He shows that innovating strategic CoPs are strongly sponsored by management, that operational excellence CoPs are used to multiply technical and operational practices throughout an organization, and that social and productive space CoPs owe their success to their members' sense of security.

 Connecting with other people, finding a sense of belonging and the need for support are natural human desires. Employees who don't feel supported at work don't stay around for long - or if they do, they quickly become unmotivated and unhappy. At a time when organisational structures are flattening and workforces are increasingly fluid, supporting and connecting people is more important than ever. This is where organisational communities of practice come in. Communities of practice have many valuable benefits. They include accelerating professional development; breaking down organisational silos; enabling knowledge sharing and management; building better practice; helping to hire and retain staff; and making people happier. In this book, Emily Webber shares her learning from personal experiences of building successful communities of practice within organisations. And along the way, she gives practical guidance on creating your own.

 Knowledge Networks: Innovation Through Communities of Practice explores the inner workings of an organizational, internationally distributed Community of Practice. The book highlights the weaknesses of the 'traditional' KM approach of 'capture-codify-store' and asserts that communities of practice are recognized as groups where soft (knowledge that cannot be captured) knowledge is created and sustained. Readers will gain insight into a period the life of a distributed international community of practice by following the members as they work, meet, collaborate, interact and socialize.
Cultivating Communities of Practice Springer
 Business intelligence supports managers in enterprises to make informed business decisions in various levels and domains such as in healthcare. These technologies can handle large structured and unstructured data (big data) in the healthcare industry. Because of the complex nature of healthcare data and the significant impact of healthcare data analysis, it is important to understand both the theories and practices of business intelligence in healthcare. Theory and Practice of Business Intelligence in Healthcare is a collection of innovative research that introduces data mining, modeling, and analytic techniques to health and healthcare data; articulates the value of big volumes of data to health and healthcare; evaluates business intelligence tools; and explores business intelligence use and applications in healthcare. While highlighting topics including digital health, operations intelligence, and patient empowerment, this book is ideally designed for healthcare professionals, IT consultants, hospital directors, data management staff, data analysts, hospital administrators, executives, managers, academicians, students, and researchers seeking current research on the digitization of health records and health systems integration.
Between Imagined Communities and Communities of Practice Routledge
 Communities of Practice in Health and Social Care highlights how communities of practice (CoPs) can make service development and quality improvement in health and social care easier to initiate and more sustainable. Using a series of case studies from the UK and Australia the book demonstrates how the theory of CoPs is implemented in the delivery of health and social care and highlights the

associated potential, complexities, advantages and disadvantages. Communities of Practice in Health and Social Care equips practitioners, managers, educators and practice mentors with the knowledge and skills to facilitate the development and maintenance of Communities of Practice and highlights how the effects of Communities of Practice might be made explicit.

Martial Arts and Well-Being explores how martial arts as a source of learning can contribute in important ways to health and well-being, as well as provide other broader social benefits. Using psychological and sociological theory related to behaviour, ritual, perception and reality construction, the book seeks to illustrate, with empirical data, how individuals make sense of and perceive the value of martial arts in their lives. This book draws on data from over 500 people, across all age ranges, and powerfully demonstrates that participating in martial arts can have a profound influence on the construction of behaviour patterns that are directly linked to lifestyle and health. Making individual connections regarding the benefits of practice, improvements to health and well-being - regardless of whether these improvements are 'true' in a medical sense - this book offers an important and original window into the importance of beliefs to health and well-being as well as the value of thinking about education as a process of life-long learning. This book will be of great interest to a range of audiences, including researchers, academics and postgraduate students interested in sports and exercise psychology, martial art studies and health and well-being. It should also be of interest to sociologists, social workers and martial arts practitioners. This publication is the latest report from AAC&U's Liberal Education and America's Promise (LEAP) initiative, which defines a set of educational practices that research has demonstrated have a significant impact on student success. Author George Kuh presents data from the National Survey of Student Engagement about these practices and explains why they benefit all students, but also seem to benefit underserved students even more than their more advantaged peers. The report also presents data that show definitively that underserved students are the least likely students, on average, to have access to these practices.

Today's marketplace is fueled by knowledge. Yet organizing systematically to leverage knowledge remains a challenge. Leading companies have discovered that technology is not enough, and that cultivating communities of practice is the keystone of an effective knowledge strategy. Communities of practice come together around common interests and expertise - whether they consist of first-line managers or customer service representatives, neurosurgeons or software programmers, city managers or home-improvement amateurs. They create, share, and apply knowledge within and across the boundaries of teams, business units, and even entire companies - providing a concrete path toward creating a true knowledge organization. In *Cultivating Communities of Practice*, Etienne Wenger, Richard McDermott, and William M. Snyder argue that while communities form naturally, organizations need to become more proactive and systematic about developing and integrating them into their strategy. This book provides practical models and methods for stewarding these communities to reach their full potential - without squelching the inner drive that makes them so valuable. Through in-depth cases from firms such as DaimlerChrysler, McKinsey & Company, Shell, and the World Bank, the authors demonstrate how communities of practice can be leveraged to drive overall company strategy, generate new business opportunities, tie personal development to corporate goals, transfer best practices, and recruit and retain top talent. They define the unique features of these communities and outline principles for nurturing their essential elements. They

provide guidelines to support communities of practice through their major stages of development, address the potential downsides of communities, and discuss the specific challenges of distributed communities. And they show how to recognize the value created by communities of practice and how to build a corporate knowledge strategy around them. Essential reading for any leader in today's knowledge economy, this is the definitive guide to developing communities of practice for the benefit-and long-term success-of organizations and the individuals who work in them. Etienne Wenger is a renowned expert and consultant on knowledge management and communities of practice in San Juan, California. Richard McDermott is a leading expert of organization and community development in Boulder, Colorado. William M. Snyder is a founding partner of Social Capital Group, in Cambridge, Massachusetts.

In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. *Communities in Action: Pathways to Health Equity* seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.

Business Process Management (BPM) has been in existence for decades. It uses, complements, integrates and extends theories, methods and tools from other scientific disciplines like: strategic management, information technology, managerial accounting, operations management etc. During this period the main focus themes of researchers and professionals in BPM were: business process modeling, business process analysis, activity based costing, business process simulation, performance measurement, workflow management, the link between information technology and BPM for process automation etc. More recently the focus moved to subjects like Knowledge Management, Enterprise Resource Planning (ERP) Systems, Service Oriented Architectures (SOAs), Process Intelligence (PI) and even Social Networks. In this collection of papers we present a review of the work and the outcomes achieved in the classic BPM fields as well as a deeper insight on recent advances in BPM. We present a review of business process modeling and analysis and we elaborate on issues like business process quality and process performance measurement as well as their link to all other organizational aspects like human resources management, strategy, information technology (being SOA, PI or ERP), other managerial systems, job descriptions etc. We also present recent advances to BPR tools with special focus on information technology, workflow, business process modeling and human resources management tools. Other chapters elaborate on the aspect of business process and organizational costing and their relationship to business process analysis, organizational change and reorganization. In the final chapters we present some new approaches that use fuzzy cognitive maps and a recently developed software tool for scenario creation and simulation in strategic management, business process management, performance measurement and social networking. The audience of this book is quite wide. The first chapters can be read by professionals, academics and students who want to get some basic insight into the BPM field whereas the remaining present more elaborate and state of the art concepts methodologies and tools for an audience of a more advanced level.

This book consists of a set of studies exploring the concept of "communities of practice", which has been influential in social sciences, education, and management in recent years. Its main purpose is to emphasize the importance of areas such as language, power, and social context which are essential to understanding how communities of practice work. The concept has been a particularly influential one but has had little sustained critique, so a book of this kind is timely and necessary.

Practicing Our Faith Springer Science & Business Media

In this book about communities of practice in the international, higher education sector, the authors articulate the theoretical foundations of communities of practice (CoPs), research into their application in higher education, leadership roles and how CoPs sustain and support professional learning. Research demonstrates that communities of practice build professional and personal links both within and across faculty, student services and administrative and support units. This book describes how community of practice members may be physically co-located and how social media can be used to connect members across geographically diverse locations. It positions higher education communities of practice within the broader community of practice and social learning

literature, and articulates the importance of community of practice leadership roles, and the growing focus on the use of social media for community of practice implementation. The multiple perspectives provide higher education leaders, academic and professional staff with the means to establish, or reflect on existing CoPs, by sharing insights and critical reflections on their implementation strategies, practical guidelines and ideas on how community of practice's theoretical underpinnings can be tailored to the higher education context.

The gold standard for evidence-based public health, *The Guide to Community Preventive Services* is a primary resource to improve health and prevent disease in states, communities, independent, nonfederal Task Force on Community Preventive Services, The Guide uses comprehensive systemic review methods to evaluate population-oriented health interventions. The recommendations of the Task Force are explicitly linked to the scientific evidence developed during systematic reviews. This volume examines the effectiveness and efficiency of interventions to combat such risky behaviors as tobacco use, physical inactivity, and violence; to reduce the impact and suffering of specific conditions such as cancer, diabetes, vaccine-preventable diseases, and motor vehicle injuries; and to address social determinants of health such as education, housing, and access to care. The chapters are grouped into three broad categories: changing risk behaviors; reducing specific diseases, injuries, and impairments; and methodological background for the book itself.

"Convergence" is defined as the intertwinement of species or technologies. "Technological convergence," on the other hand, refers to a trend where a single product such as a cell phone, used in the past solely for communication, evolves into a product that functions not only as a communication device but incorporates the distinct functionalities of a number of other technologies, thereby enabling users to take pictures, listen to music, access the Web, send and receive e-mail messages, find their way, and so on, equally successfully. Social networks such as Facebook, YouTube, MySpace and LinkedIn, where users congregate, discuss certain issues, entertain themselves, and share information in textual, audio and video formats, are among the most frequented web sites. Social networks having Web 2.0 features offer personalized services, allowing users to incorporate their own content easily and describe, organize and share it with others, thereby enriching users' experience. More often than not, a capable cell phone is all you need to get access to such social networks and carry out all those tasks. Such tools tend to change our private, social and professional lives and blur the boundaries among them. In other words, our private, social and professional lives are converging, too: someone using a cell phone could be communicating with his/her friend(s), accessing information services, taking an exam using a learning management system, or conducting business.

How can you build a successful community of practice that is integrally linked to your company's strategic vision? Learn from the first-hand experience of Hubert Saint-Onge, recognized by Fortune magazine as a leader in the field of knowledge capital, and co-author Debra Wallace, the people responsible for a recent project to establish a community of practice for independent agents at Clarica Life Insurance Company—voted one of the most admired knowledge enterprises in the world by practitioners and researchers. 'Leveraging Communities of Practice for Strategic Advantage' combines theory and practice to outline a model for developing successful communities of practice and proposes a direction for establishing communities of practice as an integral part of the organizational structure. Saint-Onge and Wallace relate what worked, what didn't, and why as they tell the story from inception through implementation to assessment. Whether you're developing communities of practice or want to learn how to leverage existing communities for strategic gain, this book provides you with everything you need to launch successful communities of practice in your organization.

"Open Innovation: A Multifaceted Perspective unveils research on open innovation from multidisciplinary perspectives and with practical insights from leaders and policy-makers. The first section addresses the links between open innovation and various disciplines, methods, concepts and policy instruments. The second section reviews selectively the literature, focusing essentially on open service innovation and innovation in financial services industries. It also explores different forms and types of practices reflecting the adoption and implementation of open innovation. The third section focuses on the management of open innovation, paying specific attention to the individual, intra- and inter-organizational levels."--Provided by publisher.

Suffering is an unavoidable reality in health care. Not only are patients and families suffering but also the clinicians who care for them. Commonly the suffering experienced by clinicians is moral in nature, in part a reflection of the increasing complexity of health care, their roles within it, and the expanding range of available interventions. Moral suffering is the anguish that occurs when the burdens of treatment appear to outweigh the benefits; scarce human and material resources must be allocated; informed consent is incomplete or inadequate; or there are disagreements about goals of treatment among patients, families or clinicians. Each is a source of moral adversity that challenges clinicians' integrity: the inner harmony that arises when their essential values and commitments are aligned with their choices and actions. If moral suffering is unrelieved it can lead to disengagement, burnout, and undermine the quality of clinical care. The most studied response to moral adversity is moral distress. The sources and sequelae of moral distress, one type of moral suffering, have been documented among clinicians across specialties. It is vital to shift the focus to solutions and to expanded individual and system strategies that mitigate the detrimental effects of moral suffering. Moral resilience, the capacity of an individual to restore or sustain integrity in response to moral adversity, offers a path forward. It encompasses capacities aimed at developing self-regulation and self-awareness, buoyancy, moral efficacy, self-stewardship and ultimately personal and relational integrity. Clinicians and healthcare organizations must work together to transform moral suffering by cultivating the individual capacities for moral resilience and designing a new architecture to support ethical practice. Used worldwide for scalable and sustainable change, the Conscious Full Spectrum approach, offers a method to solve problems to support integrity, shift patterns that undermine moral resilience and ethical practice, and source the inner potential of clinicians and leaders to produce meaningful and sustainable results that benefit all.
