Today, nearly 60 years
after the invention of the
first medical laser,
multiple laser and light
systems exist and are
applied in various medical
specialties such as

dermatology,
ophthalmology, and
urology. This volume - the
first in the series
Aesthetic Dermatology -
focuses on the laser
treatment of cutaneous
lesions with a vascular
target. Each chapter
describes a particular
laser or light modality and
its specific application to
a variety of both vascular
and nonvascular lesions.
Renowned specialists in

laser medicine have
contributed their
expertise, incorporating
current evidence-based
literature and their own
personal treatment
recommendations, as well
as pearls and perils. The
purpose of this book is to
explore the options and
parameters available to
treat cutaneous lesions
traditionally responsive to
vascular laser therapy
and to expand the

application to further lesion treatments. Readers who wish to broaden their knowledge and further hone their skills in treating cutaneous vascular lesions with lasers will find this publication a valuable and comprehensive review.

In our increasingly active society, children, teenagers, adults, and the elderly are swimming, jogging, weight training, and competing in a wide variety of individual and team sports.
