RIYA MIDDLETON

Reveal Algebra 2 McGraw-Hill Education
 "The struggle from late youth on, with and without God, agony, narcotics and love is a torment rarely recorded with such sustained eloquence and passion as you will find in this collection." --Fanny Howe
 This highly-anticipated debut boldly confronts addiction and courses the strenuous path of recovery, beginning in the wilds of the mind. Poems confront craving, control, the constant battle of alcoholism and sobriety, and the questioning of the self and its instincts within the context of this never-ending fight. From "Stop Me If You've Heard This One Before" Sometimes you just have to leave whatever's real to you, you have to

clomp through fields and kick the caps off all the toadstools. Sometimes you have to march all the way to Galilee or the literal foot of God himself before you realize you've already passed the place where you were supposed to die. I can no longer remember the being afraid, only that it came to an end. Kaveh Akbar is the founding editor of *Divedapper*. His poems appear recently or soon in *The New Yorker*, *Poetry*, *APR*, *Tin House*, *Ploughshares*, *PBS NewsHour*, and elsewhere. The recipient of a 2016 Ruth Lilly and Dorothy Sargent Rosenberg Fellowship from the Poetry Foundation and the Lucille Medwick Memorial Award from the Poetry Society of America, Akbar was born in Tehran, Iran, and currently lives and teaches in Florida.

 Precalculus is adaptable and designed to fit the needs of a variety of precalculus

courses. It is a comprehensive text that covers more ground than a typical one- or two-semester college-level precalculus course. The content is organized by clearly-defined learning objectives, and includes worked examples that demonstrate problem-solving approaches in an accessible way. Coverage and Scope
 Precalculus contains twelve chapters, roughly divided into three groups. Chapters 1-4 discuss various types of functions, providing a foundation for the remainder of the course. Chapter 1: Functions Chapter 2: Linear Functions Chapter 3: Polynomial and Rational Functions Chapter 4: Exponential and Logarithmic Functions Chapters 5-8 focus on Trigonometry. In Precalculus, we approach trigonometry by first introducing angles and the unit circle, as opposed to the right triangle approach more commonly used in College Algebra and

Trigonometry courses. Chapter 5: Trigonometric Functions Chapter 6: Periodic Functions Chapter 7: Trigonometric Identities and Equations Chapter 8: Further Applications of Trigonometry Chapters 9-12 present some advanced Precalculus topics that build on topics introduced in chapters 1-8. Most Precalculus syllabi include some of the topics in these chapters, but few include all. Instructors can select material as needed from this group of chapters, since they are not cumulative. Chapter 9: Systems of Equations and Inequalities Chapter 10: Analytic Geometry Chapter 11: Sequences, Probability and Counting Theory Chapter 12: Introduction to Calculus
