 The abdominal wall has always been of interest to surgeon-anatomists. It was recognized as a barrier, and volumes have been written demonstrating how to breach this wall. Similarly, great importance has been placed on the methods of repairing the abdominal wall, whether that repair is necessitated by a primary operative wound, a congenital failure, an acquired defect, or the ubiquitous iatrogenic problem, the postoperative abdominal wall hernia. French surgeons have a long tradition of excellence in the field of human anatomy: the names of Pare, Bichat, Cloquet, and Fru chaud readily come to mind. It is not surprising then, that this comprehensive text on the subject of the abdominal wall and its defects emanates from France. Although there are many interesting aspects to this presentation of abdominal wall problems, I find the review of prosthetic material and its use to be most unique. The synthetic meshes available today may well revolutionize our various approaches for repair of hernial defects. Considerable experience has evolved in the use of these prosthetic materials, particularly in the United Kingdom and Europe. I have been a proponent of prosthetic mesh for the cure of recurrent groin hernia during the past decade. According to the results reported in this book, the use of a prosthetic material in selected patients needing primary hernia repair seems indicated. I would be remiss if the organization GREPA were not highlighted.

For the past three decades Robert Ludlum's bestselling novels have been enjoyed by hundreds of millions of readers worldwide and have set the standard against which all other thrillers are measured. His Covert-One series has been among his most beloved creations. Now comes the latest thrilling novel in the series: Robert Ludlum's The Moscow Vector At an international conference in Prague, Lt. Col. Jon Smith, an Army research doctor specializing in infectious diseases and secretly an agent attached to Covert-One, is contacted by a Russian colleague, Dr. Valentine Petrenko. Petrenko is concerned about a small cluster of mysterious deaths in Moscow and about the Russian government's refusal to release publicly any information or data on the outbreak. When the two meet, they are attacked by a group of mysterious men and Petrenko is killed. His notes and medical samples are lost, and Smith barely escapes with his life. At the same time, a series of government officials around the world are coming down with a mysterious, fast-acting virus with a 100% fatality rate. These deaths are somehow related to the increasing militarism from the new Russian government, headed by the autocratic and ambitious President Victor Dudarev. With few clues and precious little time, Smith and Covert-One must unravel this mysterious plot and find the mysterious figure who stands at the center of it all.

 Swami Vivekananda revealed to the world the true foundations of India's unity as a nation. He taught how a nation with such a vast diversity can be bound together by a feeling of humanity and brotherhood. Vivekananda emphasized the points of drawbacks of western culture and the contribution of India to overcome those. Netaji Subhash Chandra Bose once said: “Swamiji harmonized the East and the West, religion and science, past and present. And that is why he is great. Our countrymen have gained unprecedented self-respect, self-reliance and self-assertion from his teachings.” Vivekananda was successful in constructing a virtual bridge between the culture of East and the West. He interpreted the Hindu scriptures, philosophy and the way of life to

the Western people. He made them realize that in spite of poverty and backwardness, India had a great contribution to make to world culture. He played a key role in ending India's cultural isolation from the rest of the world.

 Combining a ship finance textbook with a jet setting geopolitical romp, Viking Raid picks up where The Shipping Man left off - on a journey into the famously private world of international shipping tycoons and their financiers. At the conclusion of The Shipping Man, Robert Fairchild is sipping rosé on the Côte d'Azur with Coco Jacobsen and toasting to the success of their \$300 million junk bond offering; six months later the CEO is in the 120-degree engine room of a supertanker discharging two million barrels of Saudi crude oil - afraid for his job and afraid for his life. Fortunes change quickly in the volatile world of international oil shipping and Fairchild knows that unless he can find another \$500 million soon his powerful Norwegian tanker tycoon boss will have little use for him. When Robert convinces Coco to attempt an Initial Public Offering of Viking Tankers on Wall Street, the desperate American thinks his problems may have been solved - but the former hedge fund manager couldn't be more wrong. Instead, Fairchild finds himself stuck between an American shale gas wildcatter and The Peoples' Republic of China in their competition for clean energy. Combining swashbuckling shipping adventure with corporate finance derring-do, Viking Raid puts Fairchild back at the table in the highest stakes casino in the world - with more than just his deal at risk.

 Motor neuron diseases are the most catastrophic of neurodegenerative disorders. The cognitive function is spared, but the motor neuron degeneration translates into progressive muscle weakness and paralysis that propel the afflicted patient to eventual death. Neurodegenerative disorders constitute one of the major challenges of modern medicine in view of the current lack of effective therapies. The fruit fly, *Drosophila melanogaster*, has a distinguished history as an important model organism capable of shaping our fundamental understanding of life. Remarkably, the vast majority of all known human disease genes have a similar fly counterpart and at the molecular and physiological level, the basic principles of neuromuscular function are amazingly conserved between humans and *Drosophila*. Combine this with the presence of numerous genetic tools developed over the last century allowing genes and the proteins they encode to be manipulated swiftly to decipher their in vivo function and you have a superb genetic animal model organism of disease. This publication singles out the past and recent accomplishments of *Drosophila* in modelling motor neuron disease including amyotrophic lateral sclerosis (Lou Gehrigs

disease), hereditary spastic paraplegias, Charcot-Marie-Tooth disease, spinal and bulbar muscular atrophy (Kennedys disease) and spinal muscular atrophy. The emphasis is on recent developments including the emerging molecular pathways underpinning these disorders. Genetic screens aimed at identifying novel genes that cause motor neuron degeneration or finding modifiers of the phenotype resulting from the disruption of disease-causative genes are also tackled. Importantly, this collection provides an inspiring look at the indispensability of the fruit fly, and of model organisms in general, to neuroscience research.

Universul... Marea enigmă pe care omenirea abia a început s-o descifreze. Dacă în urmă cu 100 de ani oamenii de știință erau aproape siguri că suntem singuri în Univers, astăzi, după începerea cercetării cosmosului cu ajutorul radiotelescoapelor, sateliților sau al misiunilor prelungite în spațiu cu cosmonauți, părerea unanimă nu este dacă suntem singuri, ci unde se află alte forme de viață extraterestră? Cu atâtea apariții de obiecte zburătoare neidentificate din ultimii '50 de ani, cred că este cazul să ne întrebăm serios cine sunt aceia care conduc performantele nave de diverse forme - începând cu cea de trabuc și terminând cu clasicul disc, fără a uita și alte designuri variate (piramidă, sferă, corn de înghețată răsturnat, triunghi etc.). Numai cercetătorul Raymond Fowler, de exemplu, prezintă în una dintre cărțile sale mai multe tabele cu aproximativ 150 de desene și de schițe, realizate de martori, ale unor obiecte zburătoare neidentificate -, de unde vin și ce vor?

Led by a mysterious, never-seen figure known only as Lazarus, this increasingly prominent group is believed by some to be preparing a bold strike. When an attack on a nano-technology research facility leaves thousands dead--- protestors and scientists alike--- from what appears to be a cloud of inadvertently released but gruesomely deadly nanobots, pandemonium reigns. Lt. Col. Jon Smith is activated by Covert-One to find and uncover the truth about Lazarus where all others have failed. As Smith slowly uncovers the deadly underpinnings of the group, he soon learns that the Lazarus Movement is only the very tip of the iceberg in a deadly scheme that threatens billions of lives and will forever change the nature of the world itself.

Did an Italian monk, out of a burning love of music, invent a time machine in this century -- a machine that would extend his senses Far back into time? According to Mr. Krassa, Father Alfredo Pellegrino Ernetti, born in 1926 and who died mysteriously in 1996, developed the apparatus over a period of 40 years. Ernetti, a professor of Archaic Music, was obsessed with the notion of

finding out what an Old Roman opera, Thyestes, sounded like when played with musical instruments of that period. Driven by his passion, he developed a theoretical basis so brilliant he was able to gather a team of distinguished scientists who would bring life to his time machine, The Chronovisor.

The awesome answers are all here, in this important companion volume to The Earth Chronicles series. Having presented evidence of an additional planet as well as voluminous information about the other planets in our solar system, Zecharia Sitchin now shows how the discoveries of modern astrophysics, astronomy, and genetics exactly parallel what has already been revealed in ancient texts regarding the "mysteries" of alchemy and the creation of life. Genesis Revisited is a mind-boggling revelation sure to overturn current theories about the origins of humankind and the solar system.
