This process typically includes collection, sorting, washing and grinding of the material. Steps may occur in a different order, multiple times or not at all, depending on the origins and composition of the waste. The open-loop recycling works the other way round. In Europe, closed-loop recycling is dominant among recycling methods. For example, here, there is an extensive system for recycling drink cans. Recycling of Aluminium - Aluminium SolutionsThe most popular process is represented by the primary recycling due to their simplicity and low cost. This process refers to the reuse of products in their original structure. The disadvantage of this process is represented by the existence of a limit on the number of cycles for each material [18,36,37]. 2.2.
