In order to effectively solve business problems, managers need to understand how managerial accounting can improve decision-making. This book lays the groundwork by presenting managerial accounting in a strategic framework. Each module examines cost estimation and planning decisions in both the short- and long-term context. Budgets are then discussed as devices that connect planning and control decisions. Within each chapter, a specific decision problem is framed in a four-step manner. Throughout the pages, Chapter Connections ties the decision problems to concepts in earlier chapters. End-of-chapter material also provides a good balance of quantitative and qualitative problems. This approach enables managers to learn the linkages among seemingly unrelated decisions.

This book explains the vocabulary of cost-volume-profit (breakeven) analysis (CVP), explores the breadth of applications of CVP, and illustrates the use of CVP concepts in a broad range of management and marketing scenarios. The book examines the proper identification of a 'unit', the various formulations of breakeven, profit planning using the breakeven formulas, and the application of CVP in sensitivity analysis. Each chapter will offer several important ingredients for a practical 'how to' approach: the type of data needed, the formula, how to calculate and interpret the math, a specific example followed by a brief review of the assumptions and limitations of that method.

Cost-volume-profit (CVP) analysis is based on a linear model of earnings behavior. However, recent research documents two potential sources of asymmetry in earnings: cost stickiness and conditional conservatism. We examine the implications of these asymmetries for CVP analysis and develop an “asymmetric CVP” (ACVP) framework incorporating both phenomena. ACVP estimates for Compustat/CRSP data reveal dramatic deviations from the standard CVP model (attributed to both stickiness and conservatism). These asymmetric deviations lead to major conceptual revisions in CVP analysis and have a large impact on various CVP benchmarks.

The purpose of the case is to apply cost-volume-profit (analysis) in a service industry setting with multiple lines of service. The case emphasizes the use of CVP analysis for planning and control purposes. The executive director at Bridgestone Behavioral Health and Addiction Center is concerned about the Center's financial performance. As a result, he would like to implement a methodology to plan, monitor, and control the Center's financial performance. Students are encouraged to apply CVP analysis and to provide both an interpretation and strategy for monitoring the Center's future performance.
