Modeling and simulation of dynamic processes are very important subjects in control systems design. Most processes that are encountered in practical controller design are very well described in the engineering literature, and it is important that the control engineer is able to take advantage of this information.

Modeling of Communication Systems. Abstract The simulation of a communication system requires a software-representable description of the system. The standard description of a system is a block diagram, where each block represents a signal-processing operation. The block diagram, as such, is really only a signal flow diagram in the sense...
