 Award-winning author Tara L. Kuther presents Lifespan Development in Context, a topically organized version of her bestselling Lifespan Development text that provides a panoramic view of the many influences that shape human development. Kuther's student-friendly narrative guides the reader through immersive video cases and real-world examples to illustrate how the places, sociocultural environments, and ways in which we are raised influence who we become and how we grow and change throughout our lives. Three core themes resonate throughout each chapter: the

centrality of context, the importance of research, and the value of applied developmental science. Foundational theories and classic studies are combined with contemporary research and culturally diverse perspectives for a modern introduction to the field that is both comprehensive and concise. Visual overviews, case studies, and critical thinking questions encourage self-reflection and class discussion, ensuring students have the tools they need to apply course concepts to their lives and future careers.

New Paradigms in Ergonomics Frontiers Media SA

In this fresh new offering to the Intro Psychology course, authors John Cacioppo and Laura Freberg portray psychology as being an integrative science in two ways. First, they have written a text that reflects psychology's rightful place as a hub science that draws from and is cited by research in many other fields. Second, this text presents psychology as a unified science that seeks a complete understanding of the human mind, rather than as a loosely organized set of autonomous subspecialties. As psychology moves rapidly toward maturity as an integrative, multidisciplinary field, the introductory course offers an opportunity to teach all of psychology in one place and at one time. This text reflects that evolution—and the authors' excitement about it. Psychology, Eighth Edition in Modules Cengage Learning

"There can be no doubt that an important movement in psychology has arisen in recent times through the effort to approach the phenomena of mind from the experimental and physiological point of view. As a result of some years of study of the general subject, I express with considerable confidence the opinion that there is no ground for extravagant claims or expectations, and still less ground for any fear of consequences. In all cases of new and somewhat rankly growing scientific enterprises, it is much the better way to waive the discussion of actual or possible achievements, as well as of welcomed or dreaded revelations of new truth, and proceed at once to the business on hand. It is proposed in this book to follow this better way. It will be the task of the book itself to set forth the assured or alleged results of Physiological Psychology; and this will be done at every step with such degree of assurance as belongs to the evidence hitherto attainable upon the particular subject discussed. With declamation, either in attack or defense of the "old psychology," of the "introspective method," etc., one may dispense without serious loss. The method and arrangement of the book have been chosen so as to fit it for use, both as a text-book by special students of the subjects of which it treats, and also by the general reader who is interested in knowing what results have been reached by the more modern—and even the latest—psycho-physical researches"—Pref. Stevens' Handbook of Experimental Psychology and Cognitive Neuroscience, Sensation, Perception, and Attention John Wiley & Sons

This edited volume establishes a state-of-the-art perspective on theory and research on gender, power, and communication in human relationships.

Both theoretical essays and review chapters address issues relevant to female and male differences in power, dominance, communication, equality, and expectations/beliefs. All chapter contributors share two commonalities. First, each provides a 1990s assessment of power and equality in female and male relationships. Second, each reviews respective programs of research and focuses attention on the relevance of this research to understanding the relationships of women and men. Unique because it incorporates a multidisciplinary approach to the study of gender and the communication of power in human relationships, this book includes the original work of intellectuals with national and international reputations in the social sciences. The volume provides both scholastic breadth and centralized treatment of issues that form the very foundation of social and personal relationships. It will appeal to scholars working in the disciplines of communication and psychology as well as other areas of social science research.
