It also lets people share their location with each other for a period of time or continuously. Since the introduction of Find My iPhone over a decade ago, Apple has made it possible to Find My Nearly Everything. The current ecosystem encompasses people, Apple devices, and low-power, long-life trackers. Take Control of Find My and AirTags takes

you through the many parts of Find My so you can configure and refine how you and your stuff is tracked and shared. The book looks at three different kinds of tracking: • People: Learn how to share your location safely, follow others who let you, and send and receive notifications about arrivals and departures. • Devices: Apple lets you track the whereabouts of your and Family Sharing group members' iPhone, iPad, iPod touch, Mac, Watch, AirPods (all models), and Beats audio hardware (some models). Get to know the ins and outs of enabling Find My and taking remote actions, from playing a sound to wiping your data from a device. • Items: Find out how AirTags make use of the crowdsourced network of other people's Apple devices to help you find a lost or forgotten purse, backpack, or even car, and about third-party devices licensing the technology from Apple. Also get to know the dangers of Find My stalking and how to identify the risk, deter unwanted tracking from happening, block it if you find it—and report it to law enforcement or get other help. The book also digs into how Family Sharing interacts with personal and device location sharing and finding, and how to

help other people find their lost stuff if they don't have one of their own Apple devices handy. Covered operating systems are iOS and iPadOS versions 13 through 15, and macOS 10.15 Mojave through macOS 12 Monterey—and all the new options introduced in the latest releases of each. Here's more of what you can find in this book:

- Find out the difference between device-based Find My tracking and the Find My network.
