"This collection provides a powerful and sophisticated analysis of how environmental movements influence politics in Asia, and how politics influences movements." -- John S. Dryzek, Centenary Professor, University of Canberra "This important book reflects the challenges and questions currently foremost in scholars', activists' and policy-makers' minds-the Anthropocene, environmental justice, China's Belt and Road Initiative, and post-politics-all addressed through the lens of environmental movements in Asia. -- Jonathan Rigg, Professor at the School of Geographical Sciences, University of Bristol "How have authoritarianism, democratization and political change affected environmentalism in East and Southeast Asia? How have

environmental mobilization and demands for environmental justice at the grassroots influenced politics there? These are among the vital questions answered by this insightful and well-crafted volume." --Paul G. Harris, Chair Professor of Global and Environmental Studies, Education University of Hong Kong "This book shows convincingly that the concept of Anthropocene is as relevant in Asia as anywhere." -- Philip Hirsch, Emeritus Professor of Human Geography, University of Sydney "Despite its claims to universality, the Anthropocene concept remains largely a Western phenomenon. This book is crucial in correcting this view by putting environmental movements in Asia center stage." -- Eva Horn, Professor of Literature and Cultural History, University of Vienna

This text is meant to fill a long felt need for a comprehensive and authoritative book on heat and mass transfer for students of Mechanical/Chemical/Aeronautical/Production/ Metallurgical engineering. The dual objective of understanding the physical phenomena involved and the ability to formulate and solve typical problems by an average student has been kept in mind while writing this book. In this text, an effort has been made to identify the similarities in both qualitative and quantitative approach, between heat transfer and mass transfer. This gives a better understanding of the phenomena of mass transfer. The subject matter has been developed to a sufficiently advanced stage in a logical and coherent manner with neat illustrations along with an adequate number of solved examples. A large number of problems (with answers) at the end of each chapter assist in the pedagogy. The book has been appended with a set of selected MCQs. The role of experimentation in the teaching of Heat and Mass Transfer is well established. Properly designed

experiments reinforce the teaching of basic principles more thoroughly. Keeping this in mind one full chapter comprising 12 typical experiments forms another special feature of this text.
