thermodynamics. chapter 05: irreversibility and availability Thermodynamics Problems and Solutions - StemEZ.com Thermodynamics - problems and solutions. The first law of thermodynamics. 1. Based on graph P-V below, what is the ratio of the work done by the gas in the process I, to the work done by the gas in the process II? Known : Process 1 : Pressure (P) = 20 N/m². Initial volume (V₁) = 10 liter = 10 dm³ = 10 × 10⁻³ m³ Thermodynamics - problems and solutions | Solved Problems ... Problem : Given that the free energy of formation of liquid water is -237 kJ / mol, calculate the potential for the formation of hydrogen and oxygen from water. To solve this problem we must first calculate ΔG for the reaction, which is -2 (-237 kJ / mol) = 474 kJ / mol. Knowing that ΔG = -nFE^o and n = 4, we calculate the potential is -1.23 V. Thermodynamics: Problems and Solutions | SparkNotes The first law of thermodynamics - problems and solutions. 1. 3000 J of heat is added to a system and 2500 J of work is done by the system. What is the change in internal energy

of the system? Known : Heat (Q) = +3000 Joule. Work (W) = +2500 Joule . Wanted: the change in internal energy of the system Solution : The first law of thermodynamics - problems and solutions ... ThermodynamicsExample of Rankine Cycle - Problem with Solution
 Example of Rankine Cycle - Problem with Solution
 Let assume the Rankine cycle, which is the one of most common thermodynamic cycles in thermal power plants. In this case assume a simple cycle without reheat and without with condensing steam turbine running on saturated steam (dry steam).Example of Rankine Cycle - Problem with Solution- So far you've seen the First Law of Thermodynamics. This is what it says. Let's see how you use it. Let's look at a particular example. This one says, let's say you've got this problem, and it said 60 joules of work is done on a gas, and the gas loses 150 joules of heat to its surroundings.
