This handbook provides practical guidance for the (junior, medior and senior) Data Protection Officer (DPO) to assemble a work plan as per applicable EU GDPR guidelines. At present EU's GDPR is largely recognized as a gold standard all over the world, also for the ever-growing community of DPOs as per national legislations. This publication is part of official mandatory training materials for Certified Data Protection Officer from the European Association of Data Protection Professionals (EADPP) as per the EADPP CDPO Certification Scheme and applicable CDPO Body of Knowledge (Part D) as provided by Privacad. The practical approach followed in this richly illustrated handbook is of relevance for any (future)

Data Protection Officer active in any part of the World performing tasks as per local, regional or international norms and regulations. This book explicitly explains the roles and responsibilities of the DPO as envisaged in the GDPR. As stated by the European Data Protection Board (EDPB) it is best practice for the DPO to have a work plan. What does such a work plan look like? Providing an answer to that question lies at the core of this publication. Two key pillars are followed to assemble a professional and practical DPO work plan. First, the text as enshrined in the General Data Protection Regulation (GDPR) itself codifies an important line of orientation in the embodiment of Articles 37 to 39 of the GDPR in which the designation, positions and tasks of the DPO are discussed. Second, the typical role the DPO is playing in the "daily data protection practice" which can be inferred from, among others, an action plan (or work plan) from an enterprise (institution or organisation). In pursuit of compliance with the obligations pursuant to the GDPR, at least the following steps usually be distinguished. Establish GDPR (privacy and data protection) policies. Make an inventory of personal data. Perform a GDPR (privacy and data protection) baseline. Perform a GDPR (privacy and data protection) gap-analysis. Perform a GDPR (privacy and data protection) implementation. Perform GDPR (privacy and data protection) review and update. Perform GDPR (privacy and data protection) assurance and audit. Compose and communicate the GDPR accountability and reports. According to the European Data Protection Board (formerly operating as WP29), the DPO (or the organisation) should avail of a work plan which the organisation will use as a basis

for providing, among others, 'necessary resources' for the DPO. With the entry into force of the GDPR as of 25 May 2018, the need to work on professional maturity of the Data Protection Officer (DPO) became more and more urgent. This handbook is part of the 'Privacy and Data Protection' series offered under auspices of Honorary Visiting Professor Romeo Kadir, acting Editor-in-Chief and author of the first publications in this series. At present professor Romeo Kadir (with over 25 years of experience as privacy and data protection professional) is Constituent President of the GDPR Certification Committee Academic Board of the European Association of Data Protection Professionals (EADPP) and President of the European Institute for Privacy, Audit, Compliance and Certification (EIPACC) and lecturer with the International Privacy Academy (Privacad). He holds several positions as Board Member, Corporate Consultant and Government Advisor related to privacy and data protection affairs. A Guide to Understanding the Organization and Visualization of Technical Data Kogan Page

Businesses are rushing to collect personal data to fuel surging demand. Data enthusiasts claim personal information that's obtained from the commercial internet, including mobile platforms, social networks, cloud computing, and connected devices, will unlock path-breaking innovation, including advanced data security. By contrast, regulators and activists contend that corporate data practices too often disempower consumers by creating privacy harms and related problems. As the Internet of Things matures and facial recognition, predictive analytics, big data, and wearable tracking grow in power, scale, and scope, a controversial ecosystem will exacerbate the acrimony over commercial data capture and analysis.

The only productive way forward is to get a grip on the key problems right now and change the conversation. That's exactly what Jules Polonetsky, Omer Tene, and Evan Selinger do. They bring together diverse views from leading academics, business leaders, and policymakers to discuss the opportunities and challenges of the new data economy.
