 The urban built environment is a prime setting for microbial transmission, because just as cities serve as hubs for migration and international travel, components of the urban built environment serve as hubs that drive the transmission of infectious disease pathogens. The risk of infectious diseases for many people living in slums is further compounded by their poverty and their surrounding physical and social environment, which is often overcrowded, is prone to physical hazards, and lacks adequate or secure housing and basic infrastructure, including water, sanitation, or hygiene services. To examine the role of the urban built environment in the emergence and reemergence of infectious diseases that affect human health, the National Academies of Sciences, Engineering, and Medicine planned a public workshop. This publication summarizes the presentations and discussions from the workshop.

 Mucosal Vaccines: Innovation for Preventing Infectious Diseases discusses basic knowledge and discovery in the area of mucosal immunology and its related scientific fields. This completely updated, revised and authoritative treatise covers all aspects of mucosal vaccines, including their development, mechanisms of action, molecular/cellular aspects and practical applications. The book is organized in a unique format with basic, clinical and practical aspects described and discussed. The accumulated knowledge and new discoveries on the development of mucosal vaccines are logically introduced and discussed in an easy-to-understand format. Provides the latest views on mucosal vaccines Applies basic and current principles in the field of mucosal immunology and related scientific fields (e.g., microbiology, infectious diseases, systems biology, medicine, dentistry, veterinary medicine and translational research) to the development of new vaccines Links basic, clinical and practical

aspects of mucosal vaccines to different infectious diseases  
 Presents user-friendly organization using attractive illustrations

 Current Issues in Global Health provides a forum for a broad discussion of health issues, from systemic violence to infectious disease in places as far apart as Kashmir and South America. The authors come from a variety of environments including military and academic positions. Despite the diversity of subject matter and authors, the consistent theme of the book always focuses on the provision of an environment in which members of a community can achieve or maintain good public health. The subjects addressed here are those that cross international borders and affect lives around the world, thus truly qualifying as issues of global health importance.

 Doing Honest Work in College stands on three principles: do the work you say you do, give others credit, and present your research fairly. These are straightforward concepts, but the abundance of questionable online sources and temptation of a quick copy-paste can cause confusion as to what's considered citing and what's considered cheating. This guide starts out by clearly defining plagiarism and other forms of academic dishonesty and then gives students the tools they need to avoid those pitfalls. This edition addresses the acceptable use of mobile devices on tests, the proper approach to sources such as podcasts or social media posts, and the limitations of citation management software.

 La notion de socio-écosystème répond à la nécessité de comprendre, dans l'Anthropocène, comment interagissent les processus adaptatifs dont résulte la coévolution des êtres vivants. Étudier les socio-écosystèmes, c'est tenir compte de la diversité des échelles d'espace et de temps afin de pénétrer l'enchevêtrement des forces écologiques, sociales et économiques dont émerge un ensemble de dynamiques complexes qui conditionnent l'habitabilité de la terre. Cet ouvrage analyse, par des cas concrets dans des socio-écosystèmes régionaux et sur plusieurs continents, comment la recherche-action a permis de trouver des réponses à des questions touchant à la fois à l'agriculture, la santé et la protection de la biodiversité. Il montre que ces entreprises n'auraient pu aboutir sans la mobilisation conjointe de pratiques liant la communauté des vivants et des objets, la communauté des savoirs et les communautés d'action. Ces exemples s'accompagnent également d'une réflexion sur les conditions qui permettent de mener ces recherches à leur terme.

 Ending poverty and stabilizing climate change will be two unprecedented global achievements and two major steps toward sustainable development. But the two objectives cannot be considered in isolation: they need to be jointly tackled through an integrated strategy. This report brings together those two objectives and explores how they can more easily be achieved if considered together. It examines the potential impact of climate change and climate policies on poverty reduction. It also provides guidance on how to create a "win-win" situation so that climate change policies contribute to poverty reduction and poverty-reduction policies contribute to climate change mitigation and resilience building. The key finding of the report is that climate change represents a significant obstacle to the sustained eradication of poverty, but future impacts on poverty are determined by policy choices: rapid, inclusive, and climate-informed development can prevent most short-term impacts whereas immediate pro-poor, emissions-reduction policies can drastically limit long-term ones.

 The World Health Statistics series is WHO's annual compilation of health statistics for its 194 member states. World health statistics 2018 focuses on the health and health-related Sustainable Development Goals (SDGs) and associated targets by bringing together data on a wide range of health-related SDG indicators. It also links to the three SDG-aligned strategic priorities of the WHO's 13th General Programme of Work, 2019-2023. World health statistics 2018 is organised into three parts. First, in order to improve understanding and interpretation of the data presented, Part 1 outlines the different types of data used and provides an overview of their compilation, processing and analysis. The resulting statistics are then publicised by WHO through its flagship products such as the World Health Statistics series. In Part 2, summaries are provided of the current status of selected health-related SDG indicators at global and regional levels, based on data available as of early 2018. In Part 3, each of these three strategic priorities of achieving universal health coverage (UHC), addressing health emergencies and promoting healthier populations are illustrated through the use of highlight stories. In Annexes A and B, country-level statistics are presented for selected health-related SDG indicators. Annex B presents statistics at WHO regional and global levels.

 The use of mobile and wireless technologies to support the achievement of health objectives (mHealth) has the potential to transform the face of health service delivery across the globe. A powerful combination of factors is driving this change. These include rapid advances in mobile technologies and applications, a rise in new opportunities for the integration of mobile health into

existing eHealth services, and the continued growth in coverage of mobile cellular networks. According to the International Telecommunication Union (ITU), there are now over 5 billion wireless subscribers; over 70% of them reside in low- and middle-income countries. The GSM Association reports commercial wireless signals cover over 85% of the world's population, extending far beyond the reach of the electrical grid. For the first time the World Health Organization's (WHO) Global Observatory for eHealth (GOe) has sought to determine the status of mHealth in Member States; its 2009 global survey contained a section specifically devoted to mHealth. Completed by 114 Member States, the survey documented for analysis four aspects of mHealth: adoption of initiatives, types of initiatives, status of evaluation, and barriers to implementation. Fourteen categories of mHealth services were surveyed: health call centres, emergency toll-free telephone services, managing emergencies and disasters, mobile telemedicine, appointment reminders, community mobilization and health promotion, treatment compliance, mobile patient records, information access, patient monitoring, health surveys and data collection, surveillance, health awareness raising, and decision support systems. This manual provides concise and up-to-date knowledge on 15 infectious diseases that have the potential to become international threats and tips on how to respond to each of them. The 21st century has already been marked by major epidemics. Old diseases - cholera the plague and yellow fever - have returned and new ones have emerged - SARS pandemic influenza MERS Ebola and Zika. These epidemics and their impact on global public health have convinced the world's governments of the need for a collective and coordinated defense against emerging public health threats and accelerated the revision of the International Health Regulations (2005) entered into force in 2007. Another Ebola epidemic another plague epidemic or a new influenza pandemic are not mere probabilities the threat is real. Whether transmitted by mosquitoes other insects via contact with animals or person-to-person the only major uncertainty is when and where they or a new but equally lethal epidemic will emerge. These diseases all have the potential to spread internationally highlighting the importance of immediate and coordinated response. The diseases covered are: Ebola virus disease Lassa fever Crimean-Congo haemorrhagic fever yellow fever Zika Chikungunya avian and other zoonotic influenza seasonal influenza pandemic influenza Middle-East respiratory syndrome (MERS) cholera monkeypox the plague leptospirosis and meningococcal meningitis. Although originally developed as guidance for WHO officials this publication is available to a wide readership including all frontline responders - communities government officials non-State actors and public health professionals - who need to respond rapidly and effectively when an outbreak is detected.

"Offers a useful reminder of the role of modern science in fundamentally transforming all of our lives." —President Barack Obama (on Twitter) "An important book." —Steven Pinker, The New York Times Book Review The surprising and important story of how humans gained what amounts to an extra life, from the bestselling author of *How We Got to Now* and *Where Good Ideas Come From* In 1920, at the end of the last major pandemic, global life expectancy was just over forty years. Today, in many parts of the world, human beings can expect to live more than eighty years. As a species we have doubled our life expectancy in just one century. There are few measures of human progress more astonishing than this increased longevity. *Extra Life* is Steven Johnson's attempt to understand where that progress came from, telling the epic story of one of humanity's greatest achievements. How many of those extra years came from vaccines, or the decrease in famines, or seatbelts? What are the forces that now keep us alive longer? Behind each breakthrough lies an inspiring story of cooperative innovation, of brilliant thinkers bolstered by strong systems of public support and collaborative networks, and of dedicated activists fighting for meaningful reform. But for all its focus on positive change, this book is also a reminder that meaningful gaps in life expectancy still exist, and that new threats loom on the horizon, as the COVID-19 pandemic has made clear. How do we avoid decreases in life expectancy as our public health systems face unprecedented challenges? What current technologies or interventions that could reduce the impact of future crises are we somehow ignoring? A study in how meaningful change happens in society, *Extra Life* celebrates the enduring power of common goals and public resources, and the heroes of public health and medicine too often ignored in popular

accounts of our history. This is the sweeping story of a revolution with immense public and personal consequences: the doubling of the human life span.

The WHO World report on ageing and health is not for the book shelf it is a living breathing testament to all older people who have fought for their voice to be heard at all levels of government across disciplines and sectors. - Mr Bjarne Hastrup President International Federation on Ageing and CEO DaneAge This report outlines a framework for action to foster Healthy Ageing built around the new concept of functional ability. This will require a transformation of health systems away from disease based curative models and towards the provision of older-person-centred and integrated care. It will require the development sometimes from nothing of comprehensive systems of long term care. It will require a coordinated response from many other sectors and multiple levels of government. And it will need to draw on better ways of measuring and monitoring the health and functioning of older populations. These actions are likely to be a sound investment in society's future. A future that gives older people the freedom to live lives that previous generations might never have imagined. The World report on ageing and health responds to these challenges by recommending equally profound changes in the way health policies for ageing populations are formulated and services are provided. As the foundation for its recommendations the report looks at what the latest evidence has to say about the ageing process noting that many common perceptions and assumptions about older people are based on outdated stereotypes. The report's recommendations are anchored in the evidence comprehensive and forward-looking yet eminently practical. Throughout examples of experiences from different countries are used to illustrate how specific problems can be addressed through innovation solutions. Topics explored range from strategies to deliver comprehensive and person-centred services to older populations to policies that enable older people to live in comfort and safety to ways to correct the problems and injustices inherent in current systems for long-term care.

Five years in the writing by one of science fiction's most honored authors, *Doomsday Book* is a storytelling triumph. Connie Willis draws upon her understanding of the universalities of human nature to explore the ageless issues of evil, suffering and the indomitable will of the human spirit. For Kivrin, preparing an on-site study of one of the deadliest eras in humanity's history was as simple as receiving inoculations against the diseases of the fourteenth century and inventing an alibi for a woman traveling alone. For her instructors in the twenty-first century, it meant painstaking calculations and careful monitoring of the rendezvous location where Kivrin would be received. But a crisis strangely linking past and future strands Kivrin in a bygone age as her fellows try desperately to rescue her. In a time of superstition and fear, Kivrin—barely of age herself—finds she has become an unlikely angel of hope during one of history's darkest hours. Praise for *Doomsday Book* "A stunning novel that encompasses both suffering and hope. . . . The best work yet from one of science fiction's best writers."—The Denver Post "Splendid work—brutal, gripping and genuinely harrowing, the product of diligent research, fine writing and well-honed instincts, that should appeal far beyond the normal science-fiction constituency."—Kirkus Reviews (starred review) "The world of 1348 burns in the mind's eye, and every character alive that year

is a fully recognized being. . . . It becomes possible to feel . . . that Connie Willis did, in fact, over the five years *Doomsday Book* took her to write, open a window to another world, and that she saw something there."—The Washington Post Book World *IAPSM's Textbook of Community Medicine* Spectra News footage of disease in Africa is a familiar sight. Yet these outbreaks are often presented out of context, with no reference to the conditions that have triggered them. MISTRA's new book, *Epidemics and the Health of African Nations*, aims to redress that. Researchers and practitioners from within the continent explore why Africa is so vulnerable to disease, and show how this vulnerability is closely linked to political and economic factors. They demonstrate how these same factors determine the way epidemics are treated. Authors extract lessons from case studies in different parts of Africa; challenge conventional frameworks about disease to argue for a 'syndemics' approach that takes into account the interrelationship between disease and political and socio-economic contexts; explore challenges of Africa's future. They argue that a well-functioning health system is at the core of a country's capacity to counter an epidemic. This volume brings African experts together to probe possible solutions to the continent's heavy burden of disease. The insights offered will be helpful in devising policy for the control of disease and the combatting of epidemics in Africa.

New emerging diseases, new diagnostic modalities for resource-poor settings, new vaccine schedules ... all significant, recent developments in the fast-changing field of tropical medicine. *Hunter's Tropical Medicine and Emerging Infectious Diseases*, 10th Edition, keeps you up to date with everything from infectious diseases and environmental issues through poisoning and toxicology, animal injuries, and nutritional and micronutrient deficiencies that result from traveling to tropical or subtropical regions. This comprehensive resource provides authoritative clinical guidance, useful statistics, and chapters covering organs, skills, and services, as well as traditional pathogen-based content. You'll get a full understanding of how to recognize and treat these unique health issues, no matter how widespread or difficult to control. Includes important updates on malaria, leishmaniasis, tuberculosis and HIV, as well as coverage of Ebola, Zika virus, Chikungunya, and other emerging pathogens. Provides new vaccine schedules and information on implementation. Features five all-new chapters: Neglected Tropical Diseases: Public Health Control Programs and Mass Drug Administration; Health System and Health Care Delivery; Zika; Medical Entomology; and Vector Control - as well as 250 new images throughout. Presents the common characteristics and methods of transmission for each tropical disease, as well as the applicable diagnosis, treatment, control, and disease prevention techniques. Contains skills-based chapters such as dentistry, neonatal pediatrics and ICMI, and surgery in the tropics, and service-based chapters such as transfusion in resource-poor settings, microbiology, and imaging. Discusses maladies such as delusional parasitosis that are often seen in returning travelers, including those making international adoptions, transplant patients, medical tourists, and more.

This book systematically assesses the risk of 21 major infectious diseases threatening BRI countries. It consists of 14 chapters. Chapter 1 is an overview. Chapter 2 introduces the history of health cooperation between China and other BRI countries. Chapters 3-14 introduce the prevalence of major infectious diseases threatening BRI countries such as cholera, vaccine preventable diseases (polio, measles, meningitis, Japanese encephalitis, diphtheria, hepatitis A), tuberculosis, influenza, and insect-borne diseases (Dengue fever, Zika virus disease, yellow fever, Chikungunya, Rift Valley fever), plague, malaria, Ebola virus disease, MERS, schistosomiasis, COVID-19 and AIDS, and risk factors, principles and cases of their prevention and control. It is a useful reference book in the research of infectious disease control and prevention, and provides historical experience and lessons learned. It also provides decision support for international cooperation among BRI countries in the field of epidemic prevention and control in the future.
