 Truth Salad on the Wheels - An Array of
 Real-Life Incidents While on the Move is of
 the Belles-lettres genre. Part humour, part
 reality and part twisted personal memoir,
 the book takes the reader on a trip to gain
 new experiences from travelling around
 the earth and understanding the reality of
 life and the people around us. It is a
 compilation of numerous real-life
 incidents, which have been observed by
 the author or his trusted friends while they
 were on the move on various modes of
 transport—from walk to flight. The
 collection even takes you through journeys
 that have taken place over half a century

back! Dr Roy strongly believes that scores
 of incidents are incessantly happening
 around us and each one of them is a
 material that can be nurtured to bloom as
 a story. He expresses his illuminating life
 journey through his narration which
 dramatically immerses the readers by
 resonating with common folks. This
 captivating memoir will ride on a journey
 of adventure, cultures, people, places and
 lessons from his own experiences to
 observe and enjoy. The author's life
 experiences and perspectives, which were
 developed while travelling, will inspire a
 broader range of people, and the depiction
 of a person's emotions in real life will
 appeal to the general public. Anyone
 would relate to the author's narration of
 his journey in confronting life incidents
 which are inspiring, and the lessons of
 reality would be the takeaway for the

readers. This is the second book by this
 author. The first book is Truth Salad - A
 Medley of Memories from the Soul Kitchen
 of a Doctor.

Can one car transform a nation? The Ford Model T did so a century ago when it replaced the horse, brought about a revolution in agriculture, became a stimulus to urbanization that eventually changed the landscape of America. Though the Maruti 800, the Tata Indica, the Hyundai Santro and the Maruti Alto, became engines of growth for India, these cars neither drove away the cow nor changed the way Indians travelled. Tata's Nano was expected to change all that and become the ultimate people's car, capturing the imagination of the middle class across nations and cultures. In spite of its petite dimensions, the Nano was meant to stand tall. Yet it did not. What caused it to fail and fall from grace despite being lauded as the 'right product at the right time' and 'the most significant new car since the Ford Model T was introduced 100 years ago'? But is it really all over or is there still hope for India's 'little wonder'? What will the people's cars of tomorrow be like? *A Million Cars for a Billion People* delves into the questions, concerns and doubts, as well as the many misconceptions and myths, that have gathered momentum over the years about India's automotive history and the industry's mission to create a true 'people's car'. The very first cars that came to India; the early beginnings of the industry; the nascent history of the automobile across nations like Germany, France, US, the UK, Italy, Japan and South Korea, is narrated with authority and charm, from the viewpoint of the quest for the ultimate people's car.

In this imaginative adventure from Newbery Medal-winning author Beverly Cleary, a young mouse named Ralph is thrown into a world of excitement when a boy and his shiny toy motorcycle check in to the Mountain View Inn. When the ever-curious Ralph spots Keith's red toy motorcycle, he vows to ride it. So when Keith leaves the bike unattended in his room one day, Ralph makes his move. But

with all this freedom (and speed!) come a lot of obstacles. Whether dodging a rowdy terrier or keeping his nosy cousins away from his new wheels, Ralph has a lot going on! And with a pal like Keith always looking out for him, there's nothing this little mouse can't handle. This timeless classic now features a foreword written by New York Times bestselling author Kate DiCamillo, as well as an exclusive interview with Beverly Cleary herself. *The Mouse and the Motorcycle* is perfect for independent reading or for shared reading at home or in a classroom. This fun story is the first of a trilogy, along with *Runaway Ralph* and *Ralph S. Without the effective participation of developing Asia, a climate crisis is certain. Within developing Asia, the key to averting such a crisis lies in low carbon transport. China, India and Asia's other emerging economies could promote fuel efficient vehicles, public transport, and sustainable urban planning. Or they could become locked into inefficient vehicles, energy intensive infrastructure, and suburban sprawl. The path they choose will have long-term implications for the entire world. And it will depend upon the extent to which they adopt a co-benefit approach. A co-benefit approach involves recognizing that some transport policies mitigate greenhouse gases while simultaneously improving urban air quality, commuting times and energy security. Accounting for these additional benefits can overcome a reluctance to bear the costs of climate actions. But it also presents unique technical, financial, and institutional challenges to decision-makers unaccustomed to optimizing multiple benefits. The book represents a pioneering effort to identify and remove barriers to a co-benefit approach in developing Asia's transport sector. The introductory section makes the case for co-benefits in developing Asia's transport sector. The second section features analytical frameworks to identify strategies with potential co-benefits, offering new findings on black carbon and dieselization. The third section grounds the analytic work in case studies on fuel switching in Pakistan, urban planning in Bandung, Indonesia, congestion charges in Beijing, vehicle restraints in Hanoi and bus rapid transit in Jakarta. A final section examines whether a post-2012 climate regime can help transform a rapidly motorizing Asia into a low carbon Asia. This book is essential reading for transport policy makers, planners, and researchers concerned with low carbon transport, climate change and development in Asia and the wider world.

This new title from Bradt is the only English-language guide to focus on this part of the Pays de Loire: The Vendée and surrounding area including Pornic, La Rochelle, Île de Ré and Nantes, an increasingly popular part of France.

Written by award-winning travel writer Murray Stewart and Angela Bird, who for almost 50 years has owned a home in the region, it offers comprehensive coverage of this beguiling area, with details on everything from family holidays to walks, cycling, local cuisine and history. Thanks to the author's long history with the area, the guide also reveals the quirks and themes which give the Vendée its own distinct character, as well as straying just beyond the area's boundaries to incorporate La Rochelle and Nantes, both entry points for those arriving by air and both offering urban distractions for the occasional rainy day. The Vendée offers all the benefits of a well-established destination, both with French and British visitors, with easy access times from the UK by ferry adding to its appeal. Popular with campers and self-caterers, its sunny climate and 140km of sandy beaches, combined with tree-lined canals and open marshland, make for a diverse outdoor playground. Bradt's The Vendée and surrounding area includes information on suggested walks and cycleways, and also summarizes the best places for bird-watching. The region has no true cities, or even large towns, but the guide includes details of the many local museums which provide easily accessible insight into the bloody history of an area which has, at times, been central to the evolution of modern-day France.

The inclination towards two wheelers is not newer to the world. From the very beginning, two wheelers are recognized as a mark of triumph, independence and joy. These are considered fast, safe and easy mode of transportation with worthy fuel economy. With the arrival of automation and electronics in two wheelers, the study gained more momentum, which led Two and Three Wheeler Technology to emerge as a new discipline of automobile engineering. The book explains traditional and modern technologies in an easy to understand manner. Various technologies have been explicated with appropriate 2D and 3D diagrams to support learning. Text comprises the state-of-the-art developments in the field of two wheelers. Detailed explanation on the actual assemblies helps the students to cognize the technology systematically. Although the emphasis has been given to the two wheeler technology, considering the requirement of various syllabi, the last chapter is solely dedicated to three wheeler technology. Chapter-end review questions help students in preparing them for examination by self-assessment method. Primarily designed for the undergraduate and diploma students of automobile engineering, the lucid and simple presentation of the book makes it useful for the commoner, who has keen interest in this area. It is a useful guide for a vehicle owner for understanding mechanism and parts, which may help him in maintaining his vehicle at best efficiency.
